1945 1946 1947 1948 1949

$$x^2 + 2x + 1 = (x+1)^2$$

Figure 1. The structure of the proposed model. The model consists of three main parts: a feature extraction module, a classification module, and a fusion module. The feature extraction module uses a combination of a Convolutional Neural Network (CNN) and a Recurrent Neural Network (RNN) to process the input data. The classification module uses a Support Vector Machine (SVM) to classify the extracted features. The fusion module combines the results of the classification module with the input data to produce the final output.
