The elevation of the derrick floor above sea level is 3593 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We ran 5 1/2"-14# casing to a depth of 3524' (S.L.M.) and mudded with 109 sacks of mud and 16 sacks of aquagel. Casing was set on bottom and hole bailed dry. After bailing was completed, hole was allowed to stand two hours and at the end of this time shut-off appeared satisfactory. Drilling was then resumed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Neville G. Fenrose, Inc.
