(NOTE: Report results of multiple completion on Well
Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

On March 2, 1978 this well was plugged back from a total depth of 3719' to 3689' with a 30 foot Hydromite Plug using 600 Lbs of Hydromite. Halliburton wire line dump bailer service was employed.

On March 4, 1978 the well was placed back on pump to test the open hole Yates sand and dolomite zones from 3584' to 3689'. After pumping some ten days the water in this zone was completely exhausted, and a positive water shut-off was confirmed from the lower plugged-off Yates-Seven Rivers Reef zone.

Subsequent testing as of date confirms a water free oil and gas zone which is now making approximately 5 barrels of oil per day. The well seems to be improving as to both oil and gas. We expect to continue testing for some 30 days to determine its improvement, if any, then fracture the well with approximately 18,000 gallons of lease crude and about 1-1/2 Lbs. of sand to the gallon.
