DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding, jobs, cement-

Proposal is made to drill this well to an approximate depth of 3725 ft. with Cable Tools to test the Lynch Pay Zone. The drilling of this well will conform to the rules of Petroski Order H-111-A in detail.

1470' - 6-5/8" OD Grade A Casing will be set in Basal Rustler anhydrite at top of Salt Section or as determined necessary by regulatory representative and cemented with not less than 150% of calculated volume necessary to circulate cement to ground surface.

3420' - 5-1/2" OD J-55 Seamless Casing will be set as Salt Protection string which is approximately 400' below base of salt and above expected Lynch pay zone. Recommended nominal volume of cement will be used for testing purposes only. If the well is completed as a productive well, this string shall be re-cemented with sufficient cement to circulate the cement back to the ground surface, and used as production string.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
