The elevation of the derrick floor above sea level is 3760 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To increase production we propose to do the following:

1. Clean out and drill deeper with cable tools, testing the production at one-foot intervals until a satisfactory oil increase is obtained. Will not drill below 3743' or (30' deeper).
2. Shut and Test and return well to production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
