

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of notice by checking below:

NOTICE OF INTENTION TO TEST CASING SHUT-OFF	X	NOTICE OF INTENTION TO SHOOT OR CHEMICALLY TREAT WELL	
NOTICE OF INTENTION TO CHANGE PLANS		NOTICE OF INTENTION TO PULL OR OTHERWISE ALTER CASING	
NOTICE OF INTENTION TO REPAIR WELL		NOTICE OF INTENTION TO PLUG WELL	
NOTICE OF INTENTION TO DEEPEN WELL

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intentiton to do certain work as described below at the _____

Amerada Petroleum Corporation State N.M. Well No. 3 in SE 1/4 NW 1/4
Company or Operator Lease
of Sec. 25, T. 19, R. 36, N. M. P. M., Monument Field,
Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

8 5/8" 32# 8-Thd. New Seamless casing was set in this well at 2550' and cemented by the Halliburton Method with 500 sacks.

Casing and fittings will be tested with 1200# pump pressure and allowed to stand undisturbed for thirty minutes. If no drop in pressure results the cement will then be drilled out of the casing and the same test of 1200# pump pressure again applied and allowed to stand undisturbed for thirty minutes. If no drop in pressure results the drilling will then be resumed.

DUPLICATE

Approved _____, 19____
except as follows:

Amerada Petroleum Corporation
Company or Operator

By J. A. Starkey
Position Farm Boss

Send communications regarding well to

Name J. A. Starkey

Address Monument, New Mexico

OIL CONSERVATION COMMISSION,
By [Signature]
Title _____

Chapter 1: Linear Equations

The first chapter introduces linear equations in one variable. It covers the basic forms of linear equations, such as $ax + b = c$, and discusses how to solve them using inverse operations. The chapter also includes word problems that require setting up and solving linear equations.

Chapter 2: Systems of Linear Equations

Chapter 2 explores systems of linear equations in two variables. It introduces the graphical method, where two lines are plotted on a coordinate plane to find their intersection point. It also covers the algebraic methods of substitution and elimination.

Chapter 3: Quadratic Equations and Functions

The third chapter focuses on quadratic equations and functions. It discusses the standard form of a quadratic equation, $ax^2 + bx + c = 0$, and the quadratic formula. It also introduces the graph of a parabola and how to determine its vertex and x-intercepts.

Chapter 4: Rational Equations and Functions

Chapter 4 covers rational equations and functions. It explains how to solve rational equations by finding a common denominator and clearing the fractions. It also discusses the graph of a rational function, including vertical and horizontal asymptotes.

Chapter 5: Polynomials and Factoring

The fifth chapter deals with polynomials and factoring. It defines monomials, binomials, and trinomials, and shows how to factor them using various techniques like the difference of squares and grouping. It also discusses the relationship between factoring and solving polynomial equations.

Chapter 6: Linear Inequalities and Absolute Value

Chapter 6 introduces linear inequalities and absolute value equations. It shows how to solve these inequalities and graph their solutions on a number line. It also covers the properties of absolute value and how to solve equations involving them.

Chapter 7: Probability and Statistics

The seventh chapter covers basic probability and statistics. It discusses how to calculate the probability of an event occurring and how to interpret statistical data. It includes examples of probability distributions and measures of central tendency.

Chapter 8: Geometry and Trigonometry

Chapter 8 introduces geometry and trigonometry. It covers the properties of triangles, circles, and polygons. It also discusses the trigonometric functions sine, cosine, and tangent, and how they are used to solve problems involving right triangles.

Chapter 9: Conics and Polar Coordinates

The ninth chapter focuses on conic sections and polar coordinates. It describes the equations and graphs of circles, ellipses, parabolas, and hyperbolas. It also introduces polar coordinates and how to convert between Cartesian and polar systems.

Chapter 10: Sequences and Series

Chapter 10 covers sequences and series. It discusses arithmetic and geometric sequences, and how to find the sum of a finite or infinite series. It also introduces the concept of convergence and divergence of series.

Chapter 11: Limits and Calculus

The final chapter introduces limits and calculus. It discusses the concept of a limit and how to evaluate it. It also covers the basic rules of differentiation and integration, and their applications in physics and engineering.
