

Charles R. Webb

Mr. F. E. Heath
Dallas Office

November 19, 1945

Odessa, Texas

Dear Sir:

Attached you will find Sun Oil Company, GO report covering special gas oil ratio test recently completed on State of New Mexico Well #2 following workover; wherein, a Guiberson formation packer was set at 3899'. You will note that we were successful in reducing gas oil ratio on this well from 11,158 cu. ft. per bbl. to 2,087 cu. ft. per bbl. The production department will make up a complete report of the workover job as soon as all our cost figures are available. Since the penalty gas oil ratio limit is 4,000 cu. ft. per bbl. in the Monument Field we will be able to produce maximum allowable from our State of New Mexico Well #2 beginning December 1.

We have filled out form C-118 covering this gas oil ratio test and I am today mailing all six (6) copies of it into our production department in Dallas to be filed immediately in order that maximum allowable will be effective on December 1. Mr. Albright advises me that forms C-102 and C-103 miscellaneous workover report covering this workover will be filed from our Dallas office. It will also be necessary that they be filed immediately in order for full allowable to be given our well by December 1.

Yours very truly,

Charles R. Webb
