MEMORANDUM FOR THE DIRECTOR

Reference is made to the report of the Committee on the Revision of the Metric System, dated July 1, 1954, and to the report of the Committee on the Revision of the Metric System, dated July 1, 1954.

REVISION OF THE METRIC SYSTEM

The Committee on the Revision of the Metric System has recommended that the metric system be revised to conform with the International System of Units (SI). The proposed changes are as follows:

- 1. The meter is defined as the length of the path traveled by light in a vacuum during a time interval of 1/299,792,458 of a second.
- 2. The kilogram is defined as the mass of the International Prototype of the Kilogram.
- 3. The second is defined as the duration of 919,263,170 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the cesium-133 atom.
- 4. The ampere is defined as that constant current which, if maintained in two parallel conductors of infinite length, of negligible circular cross-section, and placed one meter apart in vacuum, would produce between these conductors a force of attraction equal to 2 x 10<sup>-7</sup> newton per meter of length.
- 5. The kelvin is defined as the fraction 1/273.15 of the thermodynamic temperature of the triple point of water.
- 6. The mole is defined as the amount of substance of a system which contains as many elementary entities as there are atoms in 0.012 kilogram of carbon-12.
- 7. The candela is defined as the luminous intensity, in a given direction, of a source that emits monochromatic radiation of frequency 540 x 10<sup>12</sup> hertz and that has a radiant intensity in that direction of (1/683) watt per steradian.

PROPOSAL FOR THE REVISION OF THE METRIC SYSTEM

The following table shows the proposed changes in the metric system and the corresponding changes in the units of the International System of Units (SI).

The proposed changes in the metric system are as follows:
