

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intentiton to do certain work as described below at the _____

Amerada Petroleum Corporation W.P. Byrd Well No. 3 in NW 1/4 SE 1/4
 Company or Operator Lease
 of Sec. 12, T. 20, R. 36, N. M. P. M., Monument Field,
Lea County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

12 1/2" 40# 8-Thd. New Logwell casing was set in this well at 188' and cemented by the Halliburton Method with 200 sacks.

Cement will be drilled out of the casing and the hole will be bailed dry and allowed to stand undisturbed for one hour. The bailer will then be run to bottom again to determine if any water has accumulated. If no water has accumulated the drilling will then be resumed.

FEB 7 1937

DUPLICATE

Approved _____, 19____
 except as follows:

Amerada Petroleum Corporation
 Company or Operator

By J. A. Starkey
 Position Farm Boss

Send communications regarding well to

Name J. A. Starkey

Address Monument, New Mexico

OIL CONSERVATION COMMISSION,

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal. If there is a discrepancy, a problem is identified.

2. Once a problem is identified, the next step is to define the problem more precisely. This involves determining the scope of the problem, the resources available, and the constraints that may be affecting the problem.

3. The third step is to generate potential solutions. This is often done through brainstorming or other creative techniques. The goal is to come up with as many possible solutions as possible, without worrying about whether they are feasible or not.

4. The fourth step is to evaluate the potential solutions. This involves comparing the solutions to the problem and determining which one is the most likely to be successful. This is often done by weighing the pros and cons of each solution.

5. The fifth step is to implement the chosen solution. This involves putting the solution into action and monitoring its progress. It is important to be flexible and willing to make adjustments if the solution is not working as expected.

6. The final step is to evaluate the results of the solution. This involves comparing the current performance to the desired state and determining whether the problem has been solved. If not, the process may need to be repeated.

7. In addition to these steps, it is important to communicate throughout the process. This involves keeping others informed of the progress and any changes that are being made. This helps to ensure that everyone is on the same page and working towards the same goal.

8. Finally, it is important to document the process. This involves keeping a record of the steps that were taken and the results that were achieved. This can be useful for future reference and for identifying areas for improvement.

9. The process of identifying and solving a problem is a continuous one. As new information is gathered and the situation changes, the problem may need to be re-evaluated and a new solution may need to be developed.

10. In conclusion, the process of identifying and solving a problem is a complex one that requires a systematic approach. By following these steps, it is possible to identify the problem, generate potential solutions, and implement the most effective one.

11. It is important to remember that the process of identifying and solving a problem is not always linear. Sometimes, it may be necessary to go back to an earlier step or to skip a step altogether. The key is to be flexible and to adapt to the situation as it changes.

12. In addition, it is important to be patient. Solving a problem can take time, and it is important not to get discouraged if the solution is not found immediately. Persistence is key.

13. Finally, it is important to celebrate success. Once a problem has been solved, it is important to take a moment to acknowledge the achievement and to share the success with others. This helps to build confidence and to encourage others to tackle their own problems.
