(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3693 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth, 3973'. 7" casing cemented at 3788'.

This well was acidized during completion, at total depth 3953', with 2000 gallons and was then drilled to its present total depth of 3973' before completion on 7-30-35. This bottom 20' of pay has never been acidized, and we now desire permission to acidize it with 2000 gallons in an attempt to increase the oil production and thereby reduce the operating gas-oil ratio.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
