

NF¹²⁷ MEXICO OIL CONSERVATION COMMISSION
 Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	X	REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

MONUMENT, NEW MEXICO, JULY 20, 1936.
Place Date

OIL CONSERVATION COMMISSION,
 Santa Fe, New Mexico.

MINERALOGICAL REPORTS

The following report was prepared by the author for the purpose of providing information regarding the mineralogical composition of the rocks of the area described. The report is based on the results of the field and laboratory work done by the author and is intended to be a guide to the reader. The author is not responsible for the accuracy of the information contained in this report.

Field work was done during the summer of 1961.

The rocks of the area are composed of a variety of minerals. The most common minerals are quartz, feldspar, and mica. The rocks are also composed of a variety of other minerals, including amphibole, pyroxene, and olivine. The rocks are also composed of a variety of other minerals, including garnet, zircon, and apatite. The rocks are also composed of a variety of other minerals, including rutile, ilmenite, and magnetite.

The rocks of the area are also composed of a variety of other minerals, including kyanite, andalusite, and sillimanite.

The rocks of the area are also composed of a variety of other minerals, including staurolite, andalusite, and sillimanite.

The rocks of the area are also composed of a variety of other minerals, including kyanite, andalusite, and sillimanite.

The rocks of the area are also composed of a variety of other minerals, including kyanite, andalusite, and sillimanite.
