### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well on the above described location to a total depth of approximately 5700 ft. in the Minebry way with the following casing and cementing program as follows: Set 13-3/8" casing at 300 ft. and cement with sufficient amount of cement to circulate. Set 9-5/8" or 8-5/8" casing at 3000 ft. and cement with sufficient amount of cement to circulate. Set 7" or 5-1/2" casing at 5700 ft. and cement with 500 sz. perforate and acidize as necessary for production. If any difficulty should be encountered while drilling, making it necessary to alter the casing program we will file a "Notice of Intention to Change Plans".

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
