The well was then allowed to flow at its proration allowable until the official proration test which was made on April 3rd. The potential before acid treatment was 1724 barrels of oil with 2,000,000 estimated cubic feet of gas. After acid treatment the potential is 5850 barrels of oil with 7,194,000 cubic feet of gas, an increase of 310%. Open flow test through tubing on proration test was 3856 barrels, which placed on tubing-casing curve gave the well a new potential of 5850 barrels for open flow.
