FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

On March 22, 1945, packer was set at 4110 feet with perforations below, to shut-off upper zone water. Subject well had previously failed to flow, and it was thought that the use of pumping equipment could be postponed by setting packer. However, after testing it was found that well would not flow, and we propose to acidize with 2000 gallons from 4110 to 4190 feet, to stimulate production and improve flowing ability.
