Re: Eumont - 24 8 205 37F Matthews

Gentlemen:

The above referenced well is shown in the September Gas Production Schedule to have produced gas during July. Our records reflect that the well was shown in both the July and June schedules to have been more than six times overproduced as indicated both by the asterisk (\*) and the overproduction status exceeding the approved limit.

Rule 115a provides for suspension for any well in excess of allowing to the Director that is established in good faith and under conditions. Upon such approval, the well may produce up to 10% of over production.

Our records do not reflect any such approval having been given. If your records show such approval was given, please furnish a copy so that we can complete our records. In the absence of such written approval you are hereby directed to shut in the well until they are within permissible limits of production.

Sincerely,

Victor T. Lyon
