The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well to an approximate T.D. of 3000' with rotary tools to test the producing possibilities of the Seven Rivers formation. 900' of 13-3/8" O.D. 48# H-40 surface casing will be set and cement circulated to surface. 2600' of 9-5/8" combination casing will be set, and cemented in accordance with Order No. R-111 of the NMOCG. Should the well prove productive, a 4-1/2" O.D. oil string will be used. All drilling operations conducted on this well to be in accordance with NMOCG Order R-111.

The original permit for this well shows the location as 660' FWL & 1980' FWL of Section 5, T-20-S, R-32-E. Please approve this permit as an amended application. Please cancel the original permit.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
