

## NEW MEXICO OIL CONSERVATION COMMISSION

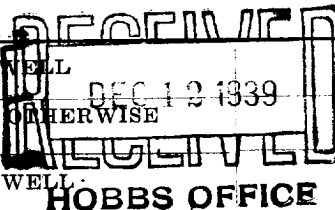

Santa Fe, New Mexico

## MISCELLANEOUS REPORTS ON WELL

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-offs, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	<input checked="" type="checkbox"/>	REPORT ON REPAIRING WELL	<input type="checkbox"/>
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL	<input type="checkbox"/>	REPORT ON PULLING OR OTHERWISE ALTERING CASING	<input type="checkbox"/>
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	<input type="checkbox"/>	REPORT ON DEEPENING WELL	<input type="checkbox"/>
REPORT ON RESULT OF PLUGGING OF WELL	<input type="checkbox"/>

# THEORY OF THE EARTH

## CHAPTER I. OF THE ORIGIN OF THE EARTH.

The origin of the earth is a subject which has occupied the minds of philosophers from the earliest ages. The ancients were divided into two schools, the one of which held that the earth was created out of nothing, and the other that it was formed out of chaos.

The modern philosophers have been more successful in their attempts to explain the origin of the earth. They have shown that the earth was formed out of a mass of gas and vapour, which was condensed into a solid state by the action of heat and pressure. This process is still going on, and the earth is continually increasing in size.

The first stage in the formation of the earth was the condensation of the gas and vapour into a solid state. This was followed by the action of heat and pressure, which caused the material to become more and more condensed.

The next stage was the formation of the crust of the earth. This was caused by the action of heat and pressure, which caused the material to become more and more condensed. The crust is the outermost layer of the earth, and it is composed of a variety of rocks and minerals.

The third stage was the formation of the interior of the earth. This was caused by the action of heat and pressure, which caused the material to become more and more condensed. The interior of the earth is composed of a variety of rocks and minerals, and it is the source of the earth's heat and energy.

## THEORY OF THE EARTH'S INTERIOR.

The theory of the earth's interior is a subject which has occupied the minds of philosophers from the earliest ages. The ancients were divided into two schools, the one of which held that the earth was created out of nothing, and the other that it was formed out of chaos.

The modern philosophers have been more successful in their attempts to explain the origin of the earth. They have shown that the earth was formed out of a mass of gas and vapour, which was condensed into a solid state by the action of heat and pressure. This process is still going on, and the earth is continually increasing in size.

The first stage in the formation of the earth was the condensation of the gas and vapour into a solid state. This was followed by the action of heat and pressure, which caused the material to become more and more condensed. The crust is the outermost layer of the earth, and it is composed of a variety of rocks and minerals.
