Attention Mr. A. L. Porter, Jr., Secretary Director

Gentlemen:

Application for Downhole Commingling - Lockhart B-11 No. 16
Unit F Section 11 T-21S, R-37E, Lea County, New Mexico

Continental Oil Company, P. O. Box 460, Hobbs, New Mexico, as operator of the Lockhart B-11 lease, respectfully requests Administrative Approval under the provisions of Rule 303C, to commingle in the wellbore production from the Blinebry Oil and Drinkard Oil Pools in the subject well. This dual completion was authorized by Administrative Order MC 1131A. The attached plat shows the Lockhart B-11 lease outlined in red and the No. 16 well by the red circle.

On September 29, 1972 the bottom hole pressures in the Blinebry and Drinkard were measured in the well. The Blinebry pressure was measured to be 640 psi after being shut-in for 24 hours. The Drinkard pressure is estimated to be 300 psi. The Drinkard Zone was pumping prior to shut-in 11-1-69.

Attached is Form C-116 indicating the latest well tests. Also attached is a production decline curve for each zone. Anticipated production from the well after commingling is 26 BOPD by pump.

The fluid from these two pools has been commingled at the battery since 1962 as approved under Administrative Order No. PC-97 and there has been no indication of incompatibility.

USGS is being notified of this application by copy of this letter. Your approval and further handling of this application will be sincerely appreciated.

Yours very truly,

SIGNED: L. P. THOMPSON

No well will be assigned an allowable greater than the amount of oil produced on the official test.

During gas-oil ratio test, each well shall be produced at a rate not exceeding the top unit allowable for the pool in which well is located by more than 25 percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that well can be assigned increased allowables when authorized by the Commission.

Gas volumes must be reported in MCF measured at a pressure base of 15.025 psia and a temperature of 60° F. Specific gravity base will be 0.60.

Report casing pressure in lieu of tubing pressure for any well producing through casing.

Mail original and one copy of this report to the district office of the New Mexico Oil Conservation Commission in accordance with Rule 301 and appropriate pool rules.

I hereby certify that the above information is true and complete to the best of my knowledge and belief.
