Re: J. R. Cone Eubanks Well No. 2, Unit L, and No. 3, Unit K,
Section 14, T-21-S, R-37-E, Lea County, NM
Blinebry Gas Pool

Dear Mr. Ramey:

The subject wells are located on an 80-acre non-standard proration unit in the Blinebry Gas Pool dedicated to Eubanks Well No. 3.

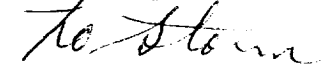

The Blinebry zone in Well No. 2 has been shut in since January 1, 1972 when the well was reclassified from Blinebry Oil to Blinebry Gas due to excessive gas-oil ratio. Well No. 3 was reclassified from Blinebry Oil to Blinebry Gas the same date, also because of excessive gas-oil ratio, and has been produced since as a gas well.

On a 24-hour test July 22, 1976, the Blinebry zone in Well No. 2 flowed 46 MCF gas with no liquid. Blinebry production from Well No. 3 currently averages approximately 11 MMCF gas and 130 barrels petroleum liquid per month.

We would note that both wells are parallel tubing strings duals: No. 2 being Blinebry Gas over Tubb Gas, and No. 3 being Blinebry Gas over Drinkard. Both wells are commingled down-hole as authorized by NMOCC Order No. R-5481 for Well No. 2 and Order No. R-5169 for well No. 3.

Because of the marginal capacity of Eubanks Wells No. 2 and No. 3 in the Blinebry Gas Pool, we respectfully request authority to produce the Blinebry Gas Pool allowable assigned the afore-mentioned 80-acre non-standard unit from either or both wells.

Yours very truly,

L. O. Storm
