

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

NOTICE OF INTENTION TO DRILL

APR 20 1946

Notice must be given to the Oil Conservation Commission or its proper agent and approval obtained before drilling begins. If changes in the proposed plan are considered advisable, a copy of this notice showing such changes will be returned to the sender. Submit this notice in triplicate. One copy will be returned following approval. See additional instructions in Rules and Regulations of the Commission.

Dallas, Texas

April 17, 1946

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.
Gentlemen:

You are hereby notified that it is our intention to commence the drilling of a well to be known as _____

Magnolia Petroleum Company**Brunson-Argo**Well No. **12** in **SE 1/4 NE 1/4**

Company or Operator

Lease

of Sec. **9**, T. **22S**, R. **37E**, N. M. P.M., **Bunice-Ellenburger** Field, **Lea** County.
N.

The well is **731** feet (N.) (~~SW~~) of the **South** line and **589** feet

~~SW~~ (W.) of the **east** line of **NE 1/4 Section 9-22S-37E**

(Give location from section or other legal subdivision lines. Cross out wrong directions.)

If state land the oil and gas lease is No. _____, Assignment No. _____

If patented land the owner is _____

Address _____

If government land the permittee is _____

Address _____

The lessee is **Magnolia Petroleum Company**

Address **Box 900, Dallas 1, Texas**

AREA 640 ACRES
LOCATE WELL CORRECTLY

We propose to drill well with drilling equipment as follows: **Rotary Drilling**
RIG, Powered with Diesel engines.

The status of a bond for this well in conformance with Rule 39 of the General Rules and Regulations of the Commission is as follows: **Financial Statement of Company filed with Commission and in First Judicial District of New Mexico.**

We propose to use the following strings of casing and to land or cement them as indicated:

Size of Hole	Size of Casing	Weight per Foot	New or Second Hand	Depth	Landed or Cemented	Sacks Cement
17-1/4"	13-3/8	48#	New	350	Cemented	210
12"	8-5/8"	36#	New	3900-XXXX	Cemented	900
8-3/4"	5-1/2"	17#	New	7650'	Cemented	750

If changes in the above plan become advisable we will notify you before cementing or landing casing. We estimate that the first productive oil or gas sand should occur at a depth of about **7650** feet.

Additional information:

Approved April 20 1946, 19____
except as follows:

Sincerely yours,

MAGNOLIA PETROLEUM COMPANY

Company or Operator

By L. J. Daniel

Position **Field Superintendent**

Send communication regarding well to

Name **(Miss) Dorothy Ansell**

Address **P.O. Box 900, Dallas 1, Texas**

OIL CONSERVATION COMMISSION,

By Roy J. Yarbrough

Title Inspector

2017-2018

1. The first part of the report is a general overview of the project. It describes the objectives, the scope, and the methodology used in the study. The objectives are to investigate the effects of the intervention on the target population and to evaluate the feasibility of the intervention in a real-world setting. The scope of the study is limited to the specific intervention and the target population. The methodology used in the study is a randomized controlled trial.

2. The second part of the report is a detailed description of the intervention. It describes the components of the intervention, the duration, and the frequency of the intervention. The intervention is a multi-component intervention that includes a combination of physical activity, nutrition, and behavior change strategies. The duration of the intervention is 12 weeks, and the frequency of the intervention is three times per week.

3. The third part of the report is a description of the study population. It describes the characteristics of the study population, including the age, sex, and health status of the participants. The study population consists of 100 participants who are aged 18-65 years, are of both sexes, and are healthy. The participants are recruited from a local community center.

4. The fourth part of the report is a description of the study design. It describes the design of the study, including the randomization process, the allocation sequence, and the blinding process. The study is a randomized controlled trial with a parallel design. The randomization process is performed using a computer-generated randomization sequence. The allocation sequence is concealed from the investigators and the participants. The blinding process is performed by the investigators and the participants.

5. The fifth part of the report is a description of the primary and secondary outcomes. It describes the primary outcome, which is the change in body mass index (BMI), and the secondary outcomes, which are the change in waist circumference, blood pressure, and blood glucose levels. The primary outcome is measured at baseline and at 12 weeks. The secondary outcomes are measured at baseline and at 12 weeks.

6. The sixth part of the report is a description of the results. It describes the results of the primary and secondary outcomes. The primary outcome is the change in BMI, which is significantly lower in the intervention group compared to the control group. The secondary outcomes are the change in waist circumference, blood pressure, and blood glucose levels, which are also significantly lower in the intervention group compared to the control group.

7. The seventh part of the report is a description of the conclusions. It describes the conclusions of the study, including the effectiveness of the intervention and the feasibility of the intervention in a real-world setting. The intervention is effective in reducing BMI, waist circumference, blood pressure, and blood glucose levels. The intervention is also feasible in a real-world setting.

8. The eighth part of the report is a description of the limitations. It describes the limitations of the study, including the small sample size, the short duration of the study, and the lack of long-term follow-up. The study has a small sample size of 100 participants. The duration of the study is 12 weeks, which is relatively short. There is no long-term follow-up.

9. The ninth part of the report is a description of the future research. It describes the future research that is needed to confirm the findings of the study and to evaluate the long-term effects of the intervention. Future research should include a larger sample size, a longer duration of the study, and long-term follow-up.

10. The tenth part of the report is a description of the references. It lists the references used in the study, including the primary literature and the secondary literature. The references are listed in alphabetical order.
