

DOMESTIC OIL COMPANY

Alamogordo, New Mexico
June 22, 1955

Mr. J. R. Payne
Samedan Oil Corporation
Hobbs, New Mexico

Dear Sir:

As per your request by telephone, we have considered the possibility of including into our gathering system the gas from your Parks Well #1, located in the Southwest Quarter of Section 14, Township 22S, Range 37E.

A field survey test was run on the vented gas and the volume measured was approximately 14,000 cubic feet per day. In view of the small volume of gas available per day which would require the installation of metering equipment and a lateral gathering line, we could not consider this tiein to be economically feasible at this time. If a larger volume of gas should be developed from this well we would like to have the opportunity to reconsider.

Yours very truly,

G. A. J. Dodd

District Superintendent
