DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is presently producing about 5 barrels of oil and 400 barrels of water per day from open hole section at 3,568 to 3,620 feet in Seven Rivers Zone. Plan to run Radioactivity log and recompleate in Basal Yates Zone behind the pipe if a water shut off attempt in the Seven Rivers does not appear feasible.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
