(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well exposing the Queens Sand to production. The casing and cementing program is as follows: Set approx. 2250' of 8-5/8" 24# J-55 3rd T. & C. new Sals. casing with 100 sacks neat cement at bottom and 250 sacks cement thru D & V Collar at approx 300', circulating to top. To set 5 1/2" cag. at approximately 3270' or at the top of the Queens prod. completing by open hole to approx. 3375' or thru the pay section. To run temp. gradient to determine top of cement. To run gamma ray-neutron log of well to T. D. To perforate and sandfrac formation for production setting tubing near center of production zone. To comply with State and Federal Regulations. Permission to produce on completion is requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
