RECEIVED

By Olivia Yu at 2:27 pm, Jan 22, 2018

Describe Cause of Problem and Remedial Action Taken.*

The oil tank ran over. The back valve was immediately opened to lower the tank levels and the tank was switched out of to stop any further release.

Describe Area Affected and Cleanup Action Taken.*

Approximately 14bbbls of oil was released into the lined SPCC containment ring. A vacuum truck was dispatched and recovered approximately 14bbbls of oil from lined containment. All fluid stayed inside the lined SPCC containment. Once fluids were removed the liner was visually inspected by Devon field staff for any pinholes or punctures and none were found. Based on this inspection there is no evidence that the spill fluids left containment.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
