If a Watercourse was Impacted, Describe Fully.* N/A		

RECEIVED

By Olivia Yu at 2:22 pm, Mar 21, 2018

Describe Cause of Problem and Remedial Action Taken.*

A pinhole was found on the produce water load line causing produced water to be released into the lined SPCC containment ring. The valve on the tank was immediately shut off and isolated to prevent any further release.

Describe Area Affected and Cleanup Action Taken.*

Approximately 8 bbls of Produced Water was released from the water load line into the lined SPCC containment ring. A vacuum truck was dispatched and approximately 8 bbls of Produced Water was recovered from the lined SPCC containment ring. The release originated at the water load line where a pinhole developed. All fluid stayed inside the lined SPCC containment. Once fluids were removed the liner was visually inspected by Devon field staff for any pinholes or punctures and none were found. Based on this inspection there is no evidence that the spill fluids left containment.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
