Instructions: Please submit one application (Form C-144 CLEZ) per individual closed-looped system request. For any application request other than for a closed-loop system that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure, please submit a Form C-144. Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable government authority's rules, regulations or ordinances.

Oil Conservation Division

CLOSED LOOP SYSTEM DESIGN, OPERATION, MAINTENANCE, AND CLOSURE PLAN FOR PLUGGING AND ABANDONDMENT OPERATIONS

This document is intended to provide design requirements as well as operating, maintenance and closure instructions for closed-loop (plugging fluids) systems, ensuring compliance with the New Mexico Title 19, Chapter 15, Part 17 rules and regulations. Plugging units operating for Apache Corporation in New Mexico shall be rigged up with a closed-loop system consistent with this design and should be operated, maintained, and closed in a manner consistent with this document.

DESIGN

The closed-loop system shall be designed and constructed to ensure the confinement of oil, gas, or water and to prevent uncontrolled releases.

The steel tank(s) shall be a minimum of 90 barrels and constructed and in a condition such that no leaks or uncontrolled release would be expected. The tank(s) shall be placed to receive all of the fluid as it returns from the well bore and entry from the flow line shall be such that splash is minimized. The tank(s) shall be connected with steel lines where applicable from the wellhead to the tank. It shall have a separate off load valve to which a vacuum truck can be attached for unloading.

The steel tanks(s) shall comply with any applicable requirements specified in 19.15.17 NMAC. Additionally, the appropriate well signs shall be in place to comply with 19.15.17 NMAC.

OPERATION and MAINTENANCE

The closed-loop system shall be operated and maintained at all times in such a manner as to prevent contamination of fresh water and protect the public health and the environment. While Apache Corporation relies on various third party vendors to provide, operate and maintain the closed-loop system, in the end it is the Apache Corp on-site representative who must take responsibility for the effective operation of the system. At the end of the plugging activities, all return fluids should be disposed of in a licensed disposal facility in New Mexico.

Know which and approved disposal facility is closest to your location and verify that they are capable and prepared to receive the fluids from your well. Track all loads sent during the plugging of the well and up to the time the rig is moved off of the location.

Current approved facilities are;

Controlled Recovery Inc.	(877) 505-4274
Sundance Incorporated	(575) 394-2511

Ensure that the closed-loop system meets the design criteria listed above and is properly installed and fully functional prior to commencing any operations which require circulation.

Inspect the active system tanks at least every tour to ensure no fluid is leaking onto the location. Check any valves and interconnecting pipes for leaks. Correct any leaks as soon as possible upon detection. Monitor and know the fluid level in the containment tank and call for a vacuum truck with enough lead time to allow for delays. Ensure that the truck driver knows which approved disposal he will be transporting the fluid to for off loading.

Make every effort to operate and maintain the closed-loop system in a manner that puts no fluid or well bore discharges in contact with the location or surrounding area.

In the event of a spill over five (5) barrels, take immediate action to contain the spill and make the following notifications;

EHS Apache Hotline(800) 874-3262NMOCD District Office

In the event of oil reaching water, include the following notification; Environmental Protection Agency (EPA) National Response Center

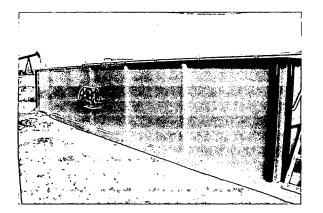

CLOSURE

Upon completion of plugging the well, all connecting lines will be drained into the tank and all remaining fluid in the tank will be removed by a vacuum truck and taken to an approved facility for disposal. All equipment will then be removed so location remediation can begin.
