OXY USA WTP LP - 192463

East Eumont Unit - 2013 Plans

OXY USA WTP LP respectfully requests a 1 year extension on the temporary abandonment of this well for further evaluation of the waterflood unit. OXY is in the process of submitting drilling permits to carry out a project that includes revitalizing the northern portion of the unit and testing potential in the southern portion of the unit. The project entails drilling 4 new wells in 2013 and the APDs for these are currently being prepared. These wells will decrease the primary production spacing from 40 acre to 20 acre spacing. Along with the newly drilled well, the wells in the immediately surrounding area will be worked over. There will be 5 producing wells re-stimulated with more appropriate completions for the reservoir and 5 injection wells will be cleaned out and stimulated to ensure sufficient flooding. In the South portion of the field, Oxy has identified 4 test wells to recomplete in new zones and evaluate the potential of the inactive portion of the field. From the results of the project, Oxy will evaluate and determine the potential reactivation of this well.
