Surface Use Plan James Federal #21H

Cimarex Energy Co. of Colorado

UL: B, Sec. 29-23S-32E

JUL 2 3 2013

HOBBS OCD

Lea County, NM

30-025-41362 1. Existing Roads: Area maps: Exhibit "B" is a reproduction of Eddy Co. General Highway Map. Exhibit USGS Topographic Map, and Exhibit "C-1" is a well site layout map, showing proposed road to location and existing road. Existing road shown on Exhibits "C," C"-1," will be maintained in a condition equal to or better than current conditions.

- A. The maximum width of the driving surface will be 15.' The road will be crowned and ditched with a 2% slope from the tip of the crown to the edge of the driving surface. The ditches will be 1' deep with 3:1 slopes. The driving surface will be made of 6" rolled and compacted caliche.
- B. From mile marker 18 of Hwy 128; Go SE 0.7 miles to lease road, go NE 2.3 miles turning N 0.4 miles then NW 0.3 miles, then N again 0.3 miles, turn E 0.1 miles, turning N 0.5 miles to lease road.

2. Planned Access Roads:

Cimarex proposes to construct 464.8' of new access road.

3. Planned Electric Line:

Excell power line is just north of the proposed wellsite. Cimarex will intercept the existing electric line coming from the North side of the well site. The proposed overhead electric line to the Excell power line would be approximately 30' in length. One 40' pole, 480 volt, 4 wire, 3 phase.

4. Location of Existing Wells in a One-Mile Radius - Exhibit A

A. Water wells -

None known

B. Disposal wells -

None known

C. Drilling wells -

None known

D. Producing wells -

As shown on Exhibits "A"

E. Abandoned wells -

As shown on Exhibits "A"

5. Location of Proposed Production Facilities:

If on completion this well is a producer, a tank battery will be used and the necessary production equipment will be installed at the James Federal #20 battery. Cimarex proposes to install two (2) 4" buried HP poly lines down existing lease road to carry oil, gas, water to the James Federal #20 tank battery approximately 1420' to the West. The route of the flowlines will be buried 25' to 35' South of the access road. MAOP 1500 psi anticipated working pressure 200-300 psi. Gas lift will be provided by HP poly line buried in the same trench along access road. Allocation will be based on well test. Any changes to flowline route will be submitted via sundry notice.

5. Location and Type of Water Supply:

Water will be purchased locally from a commercial source and trucked over the access roads.

6. Source of Construction Material:

If possible, native caliche will be obtained from the excavation of drill site. Topsoil will be pushed back from the drill site and existing caliche will be ripped and compacted. Then topsoil will be stockpiled on location as depicted on Exhibit "D" (rig layout). If additional material is needed, it will be purchased from a BLM-approved pit as near as possible to the well location.

7. Ancillary Facilities:

A. No camps or airstrips to be constructed.

RECEIVED

8. Well Site Layout:

- A. Exhibit "D" shows location and rig layout.
- B. Mud pits in the closed circulation system will be steel pits and the cuttings will be stored in steel containment pits.
- C. Cuttings will be stored in steel pits until they are hauled to a state-approved disposal facility.
- D. If the well is a producer, those areas of the location not essential to production facilities will be reclaimed and seeded per BLM requirements.

9. Plans for Restoration of Surface:

Rehabilitation of the location will start in a timely manner after all drilling operations cease. The type of reclamation will depend on whether the well is a producer or a dry hole.

Drainage systems, if any, will be reshaped to the original configuration with provisions made to alleviate erosion. These may need to be modified in certain circumstances to prevent inundation of the location's pad and surface facilities. After the area has been shaped and contoured, topsoil from the spoil pile will be placed over the disturbed area to the extent possible. Revegetation procedures will comply with BLM standards.

If the well is a dry hole, the pad and road area will be recountoured to match the existing terrain. Topsoil will be spread to the extent possible. Revegetation will comply with BLM standards.

Should the well be producer, those areas of the location not essential to porduction facilities and operations will be reclaimed and seeded per BLM requirements. Please see Production Facilities Layout Diagram, exhibit D-1

10 Other Information

- A. Topography consists of a sloping plane with loose tan sands. Vegetation is mainly yucca, mesquite and shin oak.
- B. The wellsite is on surface owned by Department of the Interior, Bureau of Land Management. The land is used mainly for farming, cattle ranching, recreational use, and oil and gas production.
- C. In lieu of an archaeological survey report, Cimarex will be submitting an MOA application for this well pad and access road since they are within the MOA boundary.
- D. There are no known dwellings within 1½ miles of this location.

11. On Site Notes and Information:

On March 7, 2013, A BLM onsite meeting was held with Barry Hunt, Cimarex representative, Amanda Lynch with the BLM, and Basin Suveys. The permitted location was approved. Location moved 145 ft. north and 100 ft. west so as to fit from old reserve pit to the south, road and power line to the east and primary power line to the north. V-Door East. Top soil west. Battery South. No reclamation due to battery pad. Access road from the southeast corner to adjacent lease road. (Power will start from this pad.)
