7. Description of Undertaking (what does the project entail?): Endurance Resources LLC. proposes to construct the Jazz Bass "34" Fed 1H, 2H, 3H and 4H, Frac Pond Location and approximately 4,000 linear feet of Multipurpose ROW within Sections 34, Township 25 South, Range 35 East in Lea County, New Mexico. The well pads are located in the southern portion of Section 34. A total of roughly 4,000 linear feet of multi-purpose ROW was also surveyed that include pipeline, lease road and overhead electric ROW. A 350' by 350' frac pond location was surveyed that is located immediately west of the 3H existing well pad location and east of an improved north/ south caliche road. A portion of the frac pond is located within the survey area for the 3H well pad location. An additional buffer of 200' was surveyed around the frac pond location. A survey buffer of 45 feet was surveyed on each side of the ROW centerline. In addition to the 400' by 400' well pad locations; a 200' buffer was surveyed around the perimeter of the well location for a total survey area of 600' by 600'. All lands surveyed for the project area are owned and administered by the Bureau of Land Management-Carlsbad Field Office.		8. Dates of Investigation: (from: 2/7/2014 to: 2/7/2014) 9. Projected legal description? Yes [x], No [] Unplatted []

f. Other Description (e.g. well pad footages, mile markers, plats, land grant name, etc.):

The project includes the Jazz Bass "34" Fed 1H (330 FSL; 660 FWL), 2H (330 FSL; 1,980 FWL), 3H (660 FSL; 1,980 FEL) and 4H (330 FSL; 660 FEL), Frac Pond Location and approximately 4,000 linear feet of Multipurpose ROW within Sections 34, Township 25 South, Range 35 East in Lea County, New Mexico. The well pads are located in the southern portion of Section 34. A total of roughly 4,000 linear feet of multi-purpose ROW was also surveyed that include pipeline, lease road and overhead electric ROW. A 350' by 350' frac pond location was surveyed that is located immediately west of the 3H existing well pad location and east of an improved north/ south caliche road. A portion of the frac pond is located within the survey area for the 3H well pad location. An additional buffer of 200' was surveyed around the frac pond location. A survey buffer of 45 feet was surveyed on each side of the ROW centerline. In addition to the 400' by 400' well pad locations; a 200' buffer was surveyed around the perimeter of the well location for a total survey area of 600' by 600'. All lands surveyed for the project area are owned and administered by the Bureau of Land Management-Carlsbad Field Office. Please see attached survey map and BLM record check map for precise locational information and land ownership.

18. Survey Field Methods:

Intensity: ☒ 100% coverage ☐ <100% coverage

Configuration: ☒ block survey units ☒ linear survey units (l x w): 4,000 linear feet ☐ other survey units (specify):

Scope: ☒ non-selective (all sites recorded) ☐ selective/thematic (selected sites recorded)

Coverage Method: ☒ systematic pedestrian coverage ☐ other method (describe)

Survey Interval (m): 15 Crew Size: 1 Fieldwork Dates: 2/7/2014 (1 Day)

Survey Person Hours: 4 Recording Person Hours: 0 Total Hours: 4

Additional Narrative:

The project area was delineated by coordinates marked on maps and by engineering flagging tape placed along the corridor route provided by the client, Endurance Resources/ Madron Surveying Company. Archaeologists used known topographic landmarks and associated project coordinates in conjunction with GPS units to locate accurate project R-O-W boundaries. The Survey crew walked multiple, parallel, non-overlapping transects spaced at approximately 50 ft (15 m) intervals, in accordance with Federal and State guidelines. All cultural resources encountered were documented these resources were categorized as I.O.s (Isolated Occurrences) or archaeological sites.

During a preliminary records search of state and federal files two archaeological sites (LA 150010, LA 149779) were noted within ½ mile of the project area. LA 149779 is a low-density artifact scatter composed of ceramics (El Paso brownware and Jornada Brown), lithic debitage, stone tool manufacturing items and ground stone along with a scatter of FCR. No features were observed. The site was assigned a Late Formative temporal affiliation (A.D. 1200-1450). The site was recommended

eligible under criterion D (HPD log 76766. LA 150010 is a low-density artifact scatter composed of chipped-stone tools, lithic debitage, stone tool manufacturing items and ground stone along with a scatter of FCR. Two features were noted, a ash stain and a midden. The site was assigned an unspecified Prehistoric temporal affiliation (10,000 B.C.-A.D. 1450) The site was recommended eligible under criterion D (HPD log 76153. LA 150010 is located roughly 250 meters to the north of the 1H well pad location and was ground-truthed during the current project to confirm its size and location outside the proposed undertaking. Both of these sites are located well outside of the proposed project area (well north and south of the proposed well pads and linear ROW locations) or the proposed area of potential effect and will not be affected by this undertaking.

19. Environmental Setting (NRCS soil designation; vegetative community; elevation; etc.):

The project area is located within a dunal desert rangeland that has been impacted by numerous sheetwashing events and wind erosion. The topography consists of mesquite, shinnery oak, yucca and grass stabilized sand sheet with few intermixed gravels. The vegetation consists of mesquite, yucca, and assorted range grasses and forbs which provide 75-100 percent surface visibility. The soils consist of light tan silty sand with a large amount of intermixed caliche gravels. Elevation within the project area is approximately 3150 and 3200 feet above mean sea level (AMSL).

20. a. Percent Ground Visibility: 75-100 percent b. Condition of Survey Area (grazed, bladed, undisturbed, etc.):

Disturbed and portions of undisturbed, It should be noted that portions of the well pad and Multi-use ROW location have been severely impacted by water erosion (i.e. sheetwashing). In addition, proximity to existing unimproved roadway and previous oil and gas activities have added to the impacts to the project area.

21. CULTURAL RESOURCE FINDINGS ☐ Yes, See Page 3 ☒ No, Discuss Why:

Sterile of cultural materials due in large part to a majority of the project area having been disturbed by various previous oil and gas activities (existing well location atop the 3H well location) and roadways (bordering all ROW locations).

22. Required Attachments (check all appropriate boxes):
