MCA Unit 067 API# 30-025-00610

Project Scope

Justification and Background:

The purpose of this project is to fix a suspected tubing or packer leak

Note: Poly lined tb	g					
Perforations						
Туре	Formation	Тор	11.0463	Bott	tom	
Perforations	Grayburg		3646'	÷ .	3811'	
Perforations	San Andreas		3824'		3829'	
TD			4233'			

Well Service Procedure:

- 1. Notify foreman Kile Wright, that you will be rigging up on the well, have him sign off.
- 2. Move in wireline. Review JSA prior to rigging up on well.
- 3. Rig up and make a dummy run to profile nipple @ 3579ft. pull out of hole with tools
- 4. Run back in and set 1.71 profile nipple.
- 5. Rig up pump truck to tubing and pressure test tubing/ plug to 500 psi.
 - If it fails. Retrieve plug and rig down wireline.
 - If casing/packer test passed and it has been identified that the tubing or on/off tool could be leaking, leave plug in profile nipple and rig down wireline.
- 6. Move in rig, review JSA prior to rig up on well. nipple down well head, nipple up BOP.
 - If tubing test failed but casing test passed, get off on/off tool and come out of hole scanning tubing; give the result of the scan to the production engineering tech.
 - We will replace any bad tubing with inventory from CTB yard.
 - If the tubing tested ok and the packer/casing test failed, come out of hole with tubing, on/off tool and packer.
- 7. Scan tubing coming out of hole & stand injection tubing.
- 8. Move in work string and tally, TIH with scrapper and tubing to 3603 ft (top of tubing fish). Come out of hole with tubing and scrapper.
- 9. TIH with RBP, packer and tubing. Set RBP at 3600 ft., pull up one joint and set packer.
- 10. Rig up pump truck to tubing and pressure test RBP/tubing to 500 psi.
- 11. If test passed rig up pump truck to casing and pressure test packer/casing to 500 psi
 - If casing/packer test fails, come up hole, isolate leak and get an injection rate. Notify production engineer
- 12. If casing/packer test passes, run in hole and retrieve RBP. Come out of hole with tubing packer & RBP
- 13. Run in hole with the following top to bottom
 - 1-2 3/8 on/off tool with WX nipple profile (1.875") SS
 - 1-23/8 × 5.5" weatherford arrowset1X retrievable packer for 5.5" (17#) casing. NP
 - 1-23/8X4' tubing sub
 - 1-2 3/8 XN nipple with 1.875" SS profile with wireline no go plug
 - 1-2 3/8 Re-entry guided.
- 14. Land and set bottom of injection packer at 3560 ft. come out of hole
- 15. Run in hole with top on/off tool and injection tubing, get on/off tool.
- 16. Rig up pump truck to tubing and pressure test tubing to 500psi.
- 17. If it passes, rig up pump truck to casing and pressure test casing/packer to 500 psi.
- 18. If test passes, get off on/off tool and circulate packer fluid to surface

MCA Unit 067 API# 30-025-00610

 Nipple down BOP, Nipple up well head, rig pump truck and chart recorder with 1000 psi chart. Pressure test casing 500 psi for 35 mins.
Casing repair is Not Authorized

Notification needs to be given to the BLM to witness this test if we had a casing issue and needed to make repairs. If the well had equipment failure issues, exp. Tubing, packer or on/off tool failure the NMOCD needs to be notified to witness the test.

- 20. Give chart to production eng tech
- 21. Move in & rig up E-line services and run in hole and retrieve plug. Pull out of hole with plug. Rig down Eline service.
- 22. Rig up pump truck to tubing and establish a flow rate down the tubing. Give result to production engineer.
