## CSAU071

determined that the site is ready for final inspection.)

The following environmental corrective action was undertaken at the repeated request and strict direction of the Oil Conservation Division (Santa Fe). The corrective action per the OCD's criteria consists of the removal and hauling of waste from the well pad to a staging area. Waste includes asphaltenes and stained soil found anywhere on or around the well pad. The removal of stained soil and/or asphaltenes surrounding wellhead and well pipe (regardless of depth and status of well) shall be by use of a backhoe, followed by hauling to a lined, bermed staging area in Cano-owned surface of NW/4 10-8S-30E of Cato Unit pending disposal arrangements. If needed, Cano will shut-in the well, move pumping unit/base and remove underlying soil. Per the OCD's instruction, if waste transport via watercourse (e.g., gully) is evident, removal and sampling will extend off well pad into watercourse. Sampling of soil for analytes per OCD post-excavation soil criteria shall be 250 mg/Kg chloride and background for benzene and TPH. When final removal is done. Cano will complete OCD Verification of Corrective Action Sheet-VCA (3-09-10), submit to OCD and await concurrence. Upon concurrence, emplace new fill, surface with caliche, replace base and pumping unit, and put well back on line.

testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has

This work has been partially completed: Cano removed 100 cubic yards soil and hauled to staging area on 4/1/2010. No further excavation will be done without BLM's written authorization. Upon BLM's authorization, Cano will proceed with i) removal of remaining waste, ii) waste management, ii) testing of waste, iv) and backfill excavated areas.

BLM Modify to: Upon BLM's authorization, Cano will proceed with i) removal of remaining waste outside of well pad area, additional archaeological survey may be necessary, contact BLM archaeologist Rebecca Hill at 575-627-0218 ii) waste management, iii) testing of soils where waste has been removed from outside the well pad in and backfill averaged areas
