All casing strings will be tested in accordance with Onshore Oil and Gas Order #2 III.B.1.h BLM standard formulas where used on all SF calculations

	Y or N
Is casing new? If used, attach certification as required in Onshore Order #1	Y
Is casing API approved? If no, attach casing specification sheet.	Y
Is premium or uncommon casing planned? If yes attach casing specification sheet.	N
Does the above casing design meet or exceed BLM's minimum standards? If not provide	Y
justification (loading assumptions, casing design criteria).	
Will the pipe be kept at a minimum 1/3 fluid filled to avoid approaching the	Y
collapse pressure rating of the casing?	
THE CONTROL OF THE PROPERTY OF	(2005-1-2-1-100)
Is well located within Capitan Reef?	N
If yes, does production casing cement tie back a minimum of 50' above the Reef?	
Is well within the designated 4 string boundary.	N
Is well located in SOPA but not in R-111-P?	N
If yes, are the first 2 strings cemented to surface and 3 rd string cement tied back	
500' into previous casing? Is well located in R-111-P and SOPA?	
T 111 1 1 D 111 D 1 0 0 D 4 0	<u>ार अस्ति हैं इस्</u>
15 Wen located in K-111-1 and SOTA:	N
If yes, are the first three strings cemented to surface?	
Is 2 nd string set 100' to 600' below the base of salt?	
	7.5.2.
Is well located in high Cave/Karst?	N
If yes, are there two strings cemented to surface?	
(For 2 string wells) If yes, is there a contingency casing if lost circulation occurs?	
Is well located in critical Cave/Karst?	N
If yes, are there three strings cemented to surface?

			Other*		email
			Annular		
			Blind Ram		
		,	Pipe Ram		
			Double Ram		
			Other*		

^{*}Specify if additional ram is utilized.

BOP/BOPE will be tested by an independent service company to 250 psi low and the high pressure indicated above per Onshore Order 2 requirements. The System may be upgraded to a higher pressure but still tested to the working pressure listed in the table above. If the system is upgraded all the components installed will be functional and tested.

Pipe rams will be operationally checked each 24 hour period. Blind rams will be operationally checked on each trip out of the hole. These checks will be noted on the daily tour sheets. Other accessories to the BOP equipment will include a Kelly cock and floor safety valve (inside BOP) and choke lines and choke manifold. See attached schematics.

NA Formation integrity test will be performed per Onshore Order #2.
On Exploratory wells or on that portion of any well approved for a 5M BOPE system or

		r, a pressure integrity test of each casing shoe shall be performed. Will be tested in lance with Onshore Oil and Gas Order #2 III.B.1 i.
	t	ance is requested for the use of a flexible choke line from the BOP to Choke
NA	Manif	old. See attached for specs and hydrostatic test chart.
	NA	Are anchors required by manufacturer?
NA	install	tibowl wellhead is being used. The BOP will be tested per Onshore Order #2 after ation on the surface casing which will cover testing requirements for a maximum of vs. If any seal subject to test pressure is broken the system must be tested.
	•	Provide description here
	See at	tached schematic.

5. Mud Program

De	pth	Type	Weight (ppg)	Viscosity	Water Loss
From	To			San Carlotte Control	
0	Surf. shoe	FW Gel	8.6-8.8	28-34	N/C
Surf shoe	Int shoe	Saturated Brine	10.0-10.2	28-34	N/C
Int shoe	TD	FW-Cut Brine	8.5-9.2	28-34	N/C

Sufficient mud materials to maintain mud properties and meet minimum lost circulation and weight increase requirements will be kept on location at all times.

What will be used to monitor the loss or gain	PVT/Pason/Visual Monitoring
of fluid?	

6. Logging and Testing Procedures See COA

Logg	ging, Coring and Testing.
X	Will run Cased hole GR/CNL from KOP to surface. Stated logs run will be in the
	Completion Report and submitted to the BLM.
X	Open hole logs are planned from KOP to Intermediate casing shoe.
No	Drill stem test? If yes, explain
No	Coring? If yes, explain

Additional logs planned		Interval	
	Resistivity	Int. shoe to KOP	
X	Density	Int. shoe to KOP	
X	CBL	Production casing	
X	Mud log	Intermediate shoe to TD	
X	PEX/HRLA/HNGS	Intermediate shoe to KOP	

7. Drilling Conditions

Condition	Specify what type and where?
BH Pressure at deepest TVD	2882 psi
Abnormal Temperature	No

Mitigation measure for abnormal conditions.

Hydrogen Sulfide (H2S) monitors will be installed prior to drilling out the surface shoe. If H2S is detected in concentrations greater than 100 ppm, the operator will comply with the provisions of Onshore Oil and Gas Order #6. If Hydrogen Sulfide is encountered, measured values and formations will be provided to the BLM.

101 mations will be provided to the BEIT.				
NO	H2S is present			
Yes	H2S Plan attached			

8. Other facets of operation

Is this a walking operation? No. Will be pre-setting casing? No.
