Shut-In Status of a Producing Gas Well

EOG Resources Inc. Red Hills North Unit - 305, API 3002535063 T25S-R33E, Sec 30, 1980FNL & 1980FWL

03/28/2017 accepted for record with this attached order of authorized officer. pswartz

Wells capable of current production and not being produced due to location, facility, marketing, or economic restrictions, or are BLM approved for a workover or recompletion will receive Shut-In status. A gas well in compliance with the following conditions will be accepted for a shut-in status of one year and may be renewed.

- 1) For compliance with the one year approval, within six months of the BLM Shut-In status acceptance:
 - A. Submit a subsequent sundry of a well test of production volume and justification for the status.
 - B. Submit a subsequent sundry of a BLM witnessed Mechanical Integrity Test of the tubing/casing annulus.
 - The minimum MIT pressure should be 500 psig for 30 minutes or 300 psig for 60 minutes, with a minimum 200 psig differential between tubing and casing pressure (at test time) but no more than 70% of casing burst pressure as described by Onshore Order 2.III.B.1.h. (The tubing or reservoir pressure may need reduction).
 - ii) Verify that all annular casing vents are open to the surface atmosphere during this pressure test.
 - iii) Document the pressure test on a one hour full rotation chart recorder (calibrated within the last 6 months) registering within 35 to 75 per cent of its full range. Greater than 10% pressure leakoff will be viewed as a failed MIT. Less than 10% pressure leakoff will be evaluated site specifically and may restrict injection approval.
 - iv) Maintaining the annulus full of packer fluid at atmospheric pressure will suffice for the MIT pressure test requirement. Equipment that will display on site, continuous open to the air fluid level above the casing vent is necessary.
 - v) Excessive (+5 bbls/month) gain or loss of annular fluid volume requires BLM notification.
- 2) Submit a subsequent sundry notification of first production upon production resumption.
- 3) Federal Oil & Gas leases are held by well production or actively drilling for production during the end of the primary term of the lease. A BLM Shut-In status will not hold the lease.
- Circumstances may dictate sundry application for preparation of a temporary or permanent abandonment status and loss of operator rights to the lease.
- 5) Section 109(d)(1) of the Federal Oil and Gas Royalty Management Act of 1982, as implemented by the applicable provisions of the operating regulations at Title 43 CFR 3163.2(f)(1), provides that any person who "knowingly or willfully" prepares, maintains, or submits false, inaccurate, or misleading reports, notices, affidavits, records, data, or other written information required by this part shall be liable for civil penalty of up to \$25,000 per violation for each day such violation continues, not to exceed a maximum of 20 days.
- 6) A person contesting a decision shall request a State Director review of the Written Order. This request must be filed within 20 working days of receipt of the Notice with the appropriate State Director (see 43 CFR 3165.3). The State Director review decision may be appealed to the Interior Board of Land Appeals, 801 North Quincy Street, Suite 300, Arlington, VA 22203 (see 43 CFR 3165.4).
