Will and Carie:

During a routine field inspection, it was noted that work was in progress on the subject well. Further investigation determined there is nothing currently on file for any work on this particular well. George Bower, NMOCD Field Representative, has informed Mr. Zimmerman in the past that any work done is to be approved by the District office prior to beginning operations. It appears this well is being converted to a producing well; therefore, forms C-101, C-102, Gas Capture Plan, and summary of work to be performed should have been filed with OCD District I office, and approval obtained, prior to workover.

Please be informed that you are **NOT** authorized to produce this well until Remnant is back into compliance with NMOCD Rule 19.15.5.9, including posting of required additional bonding for the Cal-Mon well #5, 30-015-25811.

If you have any questions, please contact our office, (575) 393-6161. Thank you ~
