The below agreements were made during a walkthrough with the Landowner and BLM on 2/14/18.

Site Map:

Timeline for Work:

Landowner currently has calves in the pasture through the spring season. The landowner will notify Hollis Cox and David Mathews when he moves the cattle from the pasture. Once the cattle are removed from the area it will be safe to operate heavy machinery (dump trucks, backhoes, bulldozers) in the vicinity of the well sites listed below. The landowner has expressed that he plans to move the cattle in May 2018.

#### **All Sites**

The power poles and debris within 300' of each site will be removed. Soil sampling will be completed for hydrocarbons with the exception of Reno Federal 1 which will be tested for chlorides. These samples will be used to identify the extent of soil remediation required.

#### **Reno Federal 1: P&A SWD Well, 33.044060, -103.817109**

Soil will be tested for chloride levels. Dependent on chloride content and depth, soil will be blended with topsoil and seeded. If chloride levels are too high for plant growth, soil will be removed and topsoil from landowner will be purchased to replace excavation. Location will be seeded.

#### **Reno Federal 2: P&A Production Well, 33.040432, -103.817108**

Visible hydrocarbons on surface will be removed. A series of earthen mounds will be made from soil currently on the location to reduce further erosion. Location will be seeded.

#### **Reno Federal 3: P&A Production Well, 33.043171, -103.811722**

Visible hydrocarbons on surface will be removed and replaced with topsoil as needed. Location will be seeded.

#### **Reno Federal 4: P&A Production Well, 33.039539, -103.811722**

Visible hydrocarbons on surface will be removed and replaced with topsoil as needed. Location will be seeded.

#### **Reno Federal CTB: Former Battery Location, 33.043273, -103.814644**

Visible hydrocarbons on surface will be removed and replaced with topsoil as needed. Caliche will be ripped and turned into the soil. Location will be seeded.

#### **Reno Federal Hydrocarbons: Site of surface flowline leak, 33.041734, -103.812072; 33.040639, -103.811651**

Visible hydrocarbons on surface will be removed and replaced with topsoil as needed. Location will be seeded.
