## State of New Mexico Energy, Minerals and Natural Resources Department

Submit Original to Appropriate District Office

Oil Conservation Division 1220 South St. Francis Dr. Santa Fe, NM 87505

Date: 3-2-18	GAS CAPTURE PLAN
□ Original	Operator & OGRID No.: Mewbourne Oil Company - 14744

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

## Well(s)/Production Facility - Name of facility

☐ Amended - Reason for Amendment:

The well(s) that will be located at the production facility are shown in the table below.

•	wents) that will be loca	accu at the pro	duction facility a	ic shown in	the table bei	ow.	
	Well Name	API	Well Location	Footages	Expected	Flared or	Comments

Gathering	System	and Pi	peline I	Notifica	tion

Well(s)	will be c	onnected to	a produc	tion facilit	y after flow	vback oper	ations are	complet	e, if ga	s transpo	rter system is	in
place.	The gas	produced fi	rom prod	uction faci	lity is ded	icated to _	Western		<u> </u>	and will	be connected	to
Wester	rn	low/hig	gh pressu	re gatherir	ig system	located in	EDDY	County,	New	Mexico.	It will requi	re
3,400	' of pip	peline to co	nnect the	facility to	low/high p	oressure ga	thering sy	stem. M	lewbou	me Oil C	ompany provid	es
(periodic	cally) to	Western		a drilling,	completion	and estima	ted first pro	oduction of	date for	wells that	are scheduled	to
be drille	d in the	foreseeable	future.	In addition	i, <u>Mewbour</u>	rne Oil Co	mpany an	d Weste	ern		have period	ic
conferen	ice calls	to discuss	changes	to drilling	and compl	letion sche	dules. G	as from	these v	vells will	be processed	at
Weste	rn	1	Processing	g Plant loca	ted in Sec	36, <b>Blk</b> .	58 T1S	Culbers	son Cou	nty, Texas	. The actual flo	W
of the ga	s will be	based on cor	mpression	operating p	arameters a	nd gatherin	g system p	ressures.				

## Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on \_\_\_western\_\_\_ system at that time. Based on current information, it is Operator's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

## **Alternatives to Reduce Flaring**

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
  - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
  - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal On lease
  - Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
