Mr. James Amos Supervisory Environmental Protection Specialist Bureau of Land Management 620 E. Greene St. Carlsbad, New Mexico 88220

Marathon Oil Company- Interim Reclamation for the Chili Parlor 17 Federal Re: 3H Located in Section 8, Township 22 South, Range 33 East, Unit O, Lea County, New Mexico.

Mr. Amos:

Tetra Tech, Inc (Tetra Tech) was contacted by Marathon Oil Company (Marathon) to prepare a scope for the proposed Interim Reclamation for the Chili Parlor 17 Federal 3H located in Section 8, Township 22 South, Range 33 East, Lea County, New Mexico. The spill site coordinates are N 32.3997481°, W 103.593154°. The site location is shown on Figures 1 and 2.

## Proposed Interim Reclamation - Facility Pad Downsizing

The Chili Parlor 17 Federal 3H well pad area measures approximately 350' x 360'. The production well has been completed and Marathon proposes an interim reclamation to downsize the portions of the pad that are not needed for production operations. Marathon proposes to downsize the pad approximately 75.0' from the north, south and west edges of the pad, as shown in Figure 3.

Any production equipment or material used for the installation of the production well located in the downsized areas will be removed. The caliche material from pad will be removed and reused to construct the well pad berm, another pad site, or for road repairs within the lease. Prior to re-use, the caliche material removed from the pad will be stockpiled onsite and field screened for chlorides evaluation. After removal of the caliche material, the reclaimed areas will be re-contoured to as close to its original state as possible and the areas will be left rough to prevent wind and rain erosion.

## Soils and Seeding

The site soils consist of the 85% Pyote and Maljamar fine sands, which has a 3% slope and well-drained soils in the area. The fine grain sands are at depths of approximately 0 to 30 inches, and 30 to 60 inches consists of fine sandy loam. The soil description and classification is shown in Appendix A.

The reclaimed areas will be seeded in June 2018 in order to coincide with the rainy season in Southeastern New Mexico to aid in revegetation. Based on the soils at the site, the area will be seeded with a BLM Seed Mixture 1 Sandy Loamy, unless BLM requires a different seed blend. The seed mixture will be planted in the specific amount per acre, as required. The seed mixture will be spread by a drill equipped with a depth regulator or a hand-held broadcaster and raked.

If you have any questions or comments concerning the proposed reclamation activities for this site, please call me at (432) 682-4559.

Tetra Tech, Inc.
