## GAS CAPTURE PLAN

| Date: 10/16/2018                  |  |
|-----------------------------------|--|
| ☑ Original                        | Operator & OGRID No.: Centennial Resource Production, LLC 372165   |
| ☐ Amended - Reason for Ame        | ndment:  |
|                                   | s actions to be taken by the Operator to reduce well/production facility flaring/venting for emplete to new zone, re-frac) activity. |
| Note: Form C-129 must be submitte | ed and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).                                       |

## Well(s)/Production Facility - Name of facility

The well(s) that will be located at the production facility are shown in the table below.

| Well Name                     | API                      | Well Location (ULSTR) | Footages             | Expected MCF/D | Flared or Vented | Comments |
|-------------------------------|--------------------------|-----------------------|----------------------|----------------|------------------|----------|
| Donkey Kong 1 Fed<br>Com 301H | Pending                  | J-1-23S-34E           | 2240 FSL<br>1356 FEL | 3260<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 302H | Pending                  | J-1-23S-34E           | 2240 FSL<br>1386 FEL | 3220<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 303H | Pending                  | J-1-23S-34E           | 2240 FSL<br>1416 FEL | 3180<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 501H | Pending                  | J-1-23S-34E           | 2090 FSL<br>1356 FEL | 1554<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 502H | Pending                  | J-1-23S-34E           | 2090 FSL<br>1386 FEL | 1547<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 503H | Pending                  | J-1-23S-34E           | 2090 FSL<br>1416 FEL | 1540<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 601H | Pending                  | J-1-23S-34E           | 1940 FSL<br>1356 FEL | 2396<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 602H | Pending                  | J-1-23S-34E           | 1940 FSL<br>1386 FEL | 2363<br>MCF/D  | Neither          | New Well |
| Donkey Kong 1 Fed<br>Com 603H | Pending <b>30-025- 1</b> | J-1-23S-34E           | 1940 FSL<br>1416 FEL | 2329<br>MCF/D  | Neither          | New Well |

#### **Gathering System and Pipeline Notification**

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated <a href="Lucid Energy Group">Lucid Energy Group</a> low/high pressure gathering system located in <a href="Lea County">Lea County</a>, New Mexico. It will require <a href="O">O</a> of pipeline to connect the facility to low/high pressure gathering system. <a href="Centennial Resource Production">Centennial Resource Production</a>, <a href="LLC">LLC</a> provides (periodically) to <a href="Lucid Energy Group">Lucid Energy Group</a> a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, <a href="Centennial Resource Production">Centennial Resource Production</a>, <a href="LLC">LLC</a> and <a href="Lucid Energy Group">Lucid Energy Group</a> have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at <a href="Red Hills Plant">Red Hills Plant</a> located in Sec. <a href="L3">13</a>, <a href="Twn\_24S">Twn\_24S</a>, <a href="Rng\_33E">Rng\_38E</a>, <a href="Lea">Lea</a> County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

## Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on <u>Lucid Energy Group</u> system at that time. Based on current information, it is <u>Centennial Resource Production, LLC</u>'s belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

### Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
  - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
  - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal On lease
  - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
