### GAS CAPTURE PLAN

x Original

Operator & OGRID No.: Devon Production Co., L.P. (6137)

☐ Amended

Date: 8/23/18

Reason for Amendment: \_\_\_\_\_

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

HOBBS 000

Note: A C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule 19.15.18.12.A

MAR 08 2019

#### Well(s)/Production Facility – Arena Roja 15 CTB 2

RECEIVED

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location	Footages	Expected MCF/D	Flared or Vented	Comments
Arena Roja 15-10 Fed Unit 1H		Sec 15-T26S-R35E	2490' FNL 790' FWL			Will connect to Arena Roja 15 CTB 2
Arena Roja 15-10 Fed Unit 2H		Sec 15-T26S-R 35E	2490' FNL 820' FWL			Will connect to Arena Roja 15 CTB 2
Arena Roja 15-10 Fed Unit 5H		Sec 15-T26S-R 35E	2490' FNL 850' FWL			Will connect to Arena Roja 15 CTB 2

#### Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to Targa and will be connected to Targa low/high pressure gathering system located in Winkler County, TX. It will require 0' of pipeline to connect the facility to low/high pressure gathering system. Devon provides (periodically) to Targa a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, Devon and Targa have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at Wildcat Processing Plant located in Sec. 44 BLK 27 PSL, Winkler, Co., Texas. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

#### Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on Targa's system at that time. Based on current information, it is Devon's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

#### Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation – On lease
  - Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas – On lease
  - Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal – On lease
  - Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
