PR VOL	EQGAS CAPTURE PLAN

Date: 4-3-18 RECL	
⊠ Original	Operator & OGRID No.: Mewbourne Oil Company - 14744
☐ Amended - Reason for Amendment:	
	•

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

Well(s)/Production Facility - Name of facility

The well(s) that will be located at the production facility are shown in the table below

٠.	e wents) that will be located at the production facility are shown in the table below.							
	Well Name API		Well Location Footages		Expected Flared or		Comments

Gathering	System	and Pi	oeline N	Notification

Well(s) v	vill be connected t	o a product	ion facility aft	er flowback ope	rations are	complete	, if ga	s transpo	rter syste	m is in
place. T	The gas produced	from prod	uction facility	is dedicated to	Western			and will	be conne	cted to
Western	n low/h	igh pressur	re gathering sy	ystem located in	1 EDDY	County,	New	Mexico.	It will	require
3,400	_' of pipeline to o	onnect the	facility to low	/high pressure g	athering sy	stem. Me	<u>ewbou</u>	ne Oil Co	ompany p	rovides
(periodica	ally) to <u>Western</u>		a drilling, comp	oletion and estima	ited first pro	oduction d	late for	wells that	are scheo	luled to
be drilled	d in the foreseeab	le future.	In addition, Mo	ewbourne Oil C	ompany an	d Weste:	rn		_ have p	periodic
conference	ce calls to discus	s changes t	o drilling and	completion sche	edules. G	as from t	hese w	ells will	be proce	ssed at
Wester	n	_ Processing	Plant located in	n Sec. <u>36</u> , Blk.	58 T1S	Culbers	on Cou	nty, Texas	. The actu	ial flow
of the gas	will be based on c	ompression	operating param	neters and gatherin	ng system p	ressures.				•

Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on __westerp___ system at that time. Based on current information, it is Operator's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
 - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
 - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal On lease
 - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
