12 Describe mean and an econom	lated an anationa (Classic	-4-411 -		a and mand and data	

 Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Request approval to temporarily abandon this wellbore in accordance with OCD Rules and Regulations. This well offsets the Anderson Ranch Unit that produces oil from State Lands with associated high volumes of produced water that is disposed on site. We wish to hold this wellbore as a future contingent SWD well to supplement the existing disposal well (ARU #16 SWD) into the Wolfcamp formation. The Mozart produced high volumes of water from the Wolfcamp zone during its producing lifetime. This wellbore should have a very high injectivity back into the Wolfcamp zone and will be a good candidate for disposal when the need for additional disposal capacity is reached at ARU. Several impending workovers/recompletions at ARU point to this need in the future.

<u>Proposed procedure:</u> RIH and set retrievable bridge plug and packer at 9600' (uppermost perforation at 9692'). Pressure test BP for positive seal with 1000 psi surface pressure. Pressure test casing annulus above RBP to 500 psi surface pressure and record on circular pressure chart for 30 minutes to insure casing integrity. We will give 24-hour notice to the Hobbs District OCD office to witness the test in the field. A current wellbore diagram is attached to this form.
