Plugging Report
Artesia Metex Unit
API 30-015-00955

6/7/2019 Cleared location and moved in equipment. Rigged up and laid down 77 7/8' rods. Dug out cellar. Could not get to the surface head due to concrete in the cellar. Installed good connections on 5 1/2" wellhead. Picked up on the tubing to remove slips and the wellhead came up with the tubing. The 5 1/2" casing was parted 3' from surface. POOH with 60 joints of 2 7/8" tubing. SION

6/10/2019 RIH with tubing to 1822'. Spot 50 sx cement with CaCl. WOC and tag at 1488'. Circulated MLF. Perforated casing at 1300'. RIH with tubing and spot 40 sx cement across perms from 1364'. POOH and SION.

6/11/2019 Tagged cement at 1047'. POOH and pick up packer to set below bad casing. Packer would not go. Picked up bit and RIH to 65'. Still could not get packer to go. Picked up scrapper and worked down to 65'. Set packer at 60 and tested casing below packer to 350#. Held good. Left packer set and perforated casing at 555'. Pumped down tubing below the packer and got good circulation up the annulus. Pulled packer and laid down remaining tubing. Reset packer and pumped cement to perms and up the annulus to surface. Took 165 sx. Rigged down and dug out around the wellhead. Good cement to surface in the annulus and cement was 15' from surface in the 5 1/2" casing. There was not metal to weld on the marker to the 8 5/8" casing or the 5 1/2" casing in the cellar. Mixed 15 sx cement. Filled up 5 1/2" casing with cement and dropped the marker pole 4' down inside of the 5 1/2" casing. Used the remaining cement to fill in around the marker inside of the cellar.
