GAS CAPTURE PLAN

<u>District I</u> 1625 N. French Dr., Hobbs, NM 88240 <u>District II</u> 811 S. First St., Artesia, NM 88210	State of New Mexico Energy, Minerals and Natural Resources D	Pepartment Submit Origina to Appropriate District Office
District III 1000 Rio Brazos Road, Aztec, NM 87410 District IV 1220 S. St. Francis Dr., Santa Fe, NM 87505	Oil Conservation Division 1220 South St. Francis Dr. Santa Fe, NM 87505	HOBBS 67019
Date: 6/25/2019	GAS CAPTURE PLAN	RECEIVE
☑ Original☐ Amended - Reason for Amendment:_	Operator & OGRID No.: EOC	G Resources, Inc. 7377

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

Well(s)/Production Facility - Name of facility

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location (ULSTR)	Footages	Expected MCF/D	Flared or Vented	Comments
Durango 2 State 701H	30-025-****	D-2-25S-33E	258 FNL & 299 FWL	±3500	None Planned	APD Submission
Durango 2 State 702H	30-025-****	D-2-25S-33E	291 FNL & 299 FWL	±3500	None Planned	APD Submission
Durango 2 State 703H	30-025-****	C-2-25S-33E	216 FNL & 2112 FWL	±3500	None Planned	APD Submission
Durango 2 State 704H	30-025-****	C-2-2S-33E	216 FNL & 2145 FWL	±3500	None Planned	APD Submission
Durango 2 State 705H	30-025-****	P-2-2S-33E	704 FSL & 928 FEL	±3500	None Planned	APD Submission
Durango 2 State 706H	30-025-****	B-2-2S-33E	355 FNL & 1680 FEL	±3500	None Planned	APD Submission
Durango 2 State 707H	30-025-****	P-2-2S-33E	704 FNL & 895 FEL	±3500	None Planned	APD Submission
Durango 2 State 708H	30-025-****	A-2-2S-33E	388 FNL & 1680 FEL	±3500	None Planned	APD Submission

Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to Enterprise Field Services/Lucid Energy and will be connected to EOG Resources low/high pressure gathering system located in Eddy/Lea County, New Mexico. EOG Resources provides (periodically) to Enterprise Field Services/Lucid Energy a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, EOG Resources and Enterprise Field Services/Lucid Energy have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at Enterprise Field Services/Lucid Energy Processing Plant located in Lea County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on Enterprise Field Services/Lucid Energy system at that time. Based on current information, it is EOG Resources' belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
 - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
 - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal On lease
 - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
