Additional data for EC transaction #467190 that would not fit on the form

32. Additional remarks, continued

analysis. The cost analysis shows that the associated costs of leasing the system would be prohibitive.

A nitrogen rejection system would be most cost effective at the DML central processing plant than at individual well sites throughout the field. DML has been approached by McElvain about this situation but McElvain has received no indication from DML that they are interested in pursuing this option.

Beneficial Use of Flared Gas

All of the flared gas that can be used (fuel gas for heater treaters ~3 mcfd) on lease is already currently being used. We currently have no propane being used on the leases that we could be substituted for flared gas. All of the pumping unit prime movers are electric. I have attached the file ?GasContract2? which includes this well and the stated nitrogen specs. I

I have attached the file ?GasContract2? which includes this well and the stated nitrogen specs. I have also attached the most recent gas analysis for this well ('Gas Analysis Edith Fed #3_2019 May30').

Date: JANUARY 1, 2004

Page 1 Gas Purchase Contract

4. QUALITY.

4.1 Unless otherwise specified in the Base Contract. Gas delivered hereunder will be commercially free of dust, gum, gum forming constituents, treating chemicals and solid matter that might adversely affect the gathering thereof and will conform to the following specifications:

(__)

(a)	Carbon Dioxide	Not more than 2 mole percent (2%)
(b)	Free Water	None
(c)	Hydrogen Sulfide	Not more than 1/4 grain per 100 Cubic Feet
(d)	Mercaptan Sulfur	Not more than 1/10 grain per 100 Cubic Feet
(8)	Total Sulfur	Not more than 0.5 grains per 100 Cubic Feet
(1)	Oxygen	Not more than 0.001 mole percent (0.001%)
(و) 🗲	Total Inerts	Not more than 3 mole percent (3%), including Nitrogen
(h)	Heating Value	Not less than 1050 Btu per Cubic Foot
(1)	Temporature	Not more than 120 degrees Fahrenheit

4.2 The acceptance of Gas which does not meet the specifications of this Section 4 will not be deemed a waiver of the right to require future deliveries to conform to said specifications.

5. ALLOCATION PROCEDURES.

;)

- 5.1 Buyer is capable of selectively recovering certain Products from time to time. In Buyer's sole judgment, Buyer may decide to recover some or none of the Products from a particular well or wells delivering Gas to the Plant(s).
- 5.2 If Buyer decides to recover less than the total Products recoverable from any well or wells, then it will determine on a well-by-well basis the total theoretical gallons that it wishes to recover. Products will be allocated to the wells from which Buyer elected to recover on a pro-rata basis including Allocated Fuel, Allocated Flare, System Use, and shrinkage, based on the available data concerning the well(s).
- 5.3 The Residue Gas will be allocated on a pro-rata basis to all well(s) based upon the total Blus from each well, as determined from available data, and the total Blus of Residue Gas sold, and taking into account on a well-by-well basis the shrinkage attributable to such well, if any, and the fuel needed to operate the Plant.
- 5.4 All allocations of Products and Residue Gas will be based on measurements and tests attributable to the Dedicated Gas. Seller agrees that this information is sufficient to make the allocations described herein.

6. MEASUREMENT AND TESTING.

- 6.1 The volume of Gas delivered to the Delivery Point(s) will be computed in accordance with the methods prescribed in Gas Measurement Committee Report No. 3 and/or Report No. 7, Natural Gas Department, American Gas Association, including the Appendix and any amendments or supplements thereto. The measurement and tests for quantity and quality of Gas will be made at the Delivery Point(s).
- 6.2 Buyer will install and maintain at no cost to Seller a natural gas measuring station property equipped with an orifice meter and either an electronic flow recorder or a mechanical chart integrator of standard design and manufacture. The measurements of this measuring station will fix the total quantity of gas delivery at the Delivery Point(s) and will be deemed the exclusive method of measuring gas delivered to Buyer.
- 6.3 Seller will have access to the metering equipment at reasonable times upon request, but only Buyer will do adjustments and calibration. Buyer will keep the measuring equipment accurate and in repair and will test the orifice moter in service semi-annually or more often at Buyer's option. Buyer will also test the measuring equipment upon request of Seller, but if the results of a test requested by Seller are within two percent (2%) by volume high or tow of the most recent previous test, Seller will pay for such test.
- 6.4 The meter found on test to register nor more than two (2%) percent by volume high or low will be deemed to be correct as to past measurements but will be corrected to record accurately. If the meter upon test proves to be more than two percent (2%) by volume high or low, adjustment will be made for the gas delivered during the period such meter was registering inaccurately; provided that such period will not exceed half of the time since the last test, and no retroactive adjustments will be made for volume discrepancies less than 100 Mcl. If Buyer's meter is not registering accurately, the registration of Seller's check meter, if accurately indicating within the tolerances provided above, will be used to determine the volume of gas delivered to Buyer until such time as Buyer's meter is adjusted, repaired, or replaced. If Seller has not installed a check meter, or if such check meter has been installed and fails to record accurately, then the volume of gas delivered during the period Buyer's meter was inoperative will be determined upon the basis of the best data available, either by correcting the error if the percentage of error is
