The elevation of the derrick floor above sea level is **4,155** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This test was drilled to T. D. 2776' and plugged December 14, 1955.

We plan to reenter, drill out all plugs and probably drill 10' - 20' of new hole.

4 1/2" casing will be run to bottom and cemented with 100 sacks.

This casing will be perforated for an attempted Queen Sand completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
