13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Perforate lower most Seven Rivers at 3240'-44', 55'-58', 66'-70' w/2 jspt. Set RBP below perfs and packer above. Swab test new perfs. If new pay is commercial the old perfs will be squeeze cemented, drilled out and the new pay will be placed on pump. If not, then the perfs at 3175'-93', 3103'-50', 3053'-91' and 2946'-80' will be tested individually to determine which interval is commercial and which is making most of the water. Then the non commercial pays will be squeezed and the commercial pays will be placed back on pump. The pay at 3240'-70' produced in the 2 south offset wells which are down structure. This well makes 4 BOPD and 510 BWPD and is un-economical to produce. Estimate start date 4/15/93.
