INTRODUCTION

Environmental Technology Group, Inc. (ETGI) has prepared this Annual Monitoring Report on behalf of Link Energy (Link), in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998 requiring submittal of an Annual Monitoring Report by April 1 of each year. This report is intended to be viewed as a complete document with figures, attachments, tables, and text. This report presents the results of quarterly groundwater monitoring events conducted in the calendar year 2000 only. For reference, a Site Location Map is provided as Figure 1.

This site was opened by other environmental consultants prior to the involvement of ETGI in November 1999. Due to site excavation activities, groundwater monitor well MW-3 was plugged and abandoned in November 1999. Groundwater monitoring was conducted during five monitoring events in the calendar year 2000 to assess the levels and extent of dissolved phase constituents. Groundwater monitoring events consisted of measuring static water levels in the monitor wells, purging and subsequent sampling of each well exhibiting sufficient recharge. Groundwater monitoring events were not conducted in the calendar years 2001, 2002 or 2003, due to site access restrictions imposed by the landowner.

FIELD ACTIVITIES

The monitor wells were gauged and sampled on March 9, May 19, June 6, August 30, and December 13, 2000. During each sampling event, the monitor wells were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Groundwater was allowed to recharge and samples were obtained using disposable Teflon samplers. Groundwater samples were stored in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pate Trucking of Hobbs, New Mexico at a NMOCD licensed disposal facility (NMOCD AO SWD-730).

GROUNDWATER GRADIENT

Locations of the monitor wells and the inferred groundwater gradient, constructed from measurements collected during the sampling events are depicted on Figures 2A-2E, the Inferred Groundwater Gradient Maps. Cumulative groundwater elevation data is provided as Table 1. Groundwater elevation contours generated from water level measurements collected during the monitoring events of 2000 indicated a general gradient from approximately 0.006 ft./ft. to 0.009 ft./ft. to the southwest as measured between groundwater monitor wells MW-1 and MW-5. The depth to groundwater as measured from the top of the well casings ranged between 29.20 to 31.37 feet in the shallow alluvial aquifer.

LABORATORY RESULTS

Groundwater samples obtained during monitoring events were delivered to the Environmental Laboratory of Texas, Midland, Texas for determination of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) constituent concentrations by EPA Method SW 846-8021B. A cumulative listing of BTEX constituent concentrations is summarized in Table 2 and copies of the laboratory reports are provided as Appendix A. Groundwater sampling results reflecting benzene and total BTEX concentrations are depicted on Figures 3A-3E, the Groundwater Concentration Maps.

Review of the laboratory analytical results generated from analysis of the groundwater samples obtained during the monitoring period indicate that benzene and total BTEX concentrations were below the applicable NMOCD regulatory standards in all of the monitor wells on-site. PSH has not been detected on-site during any of the groundwater monitoring events.

SUMMARY

This report presents the results of quarterly groundwater monitoring events conducted in the calendar year 2000 only. Groundwater monitoring events were not conducted during the calendar years 2001, 2002 or 2003 due to site access restrictions imposed by the landowner.

Groundwater elevation contours generated from water level measurements acquired during the quarterly monitoring events of 2000 indicated a general gradient of approximately 0.006 ft./ft. to 0.009 ft./ft. to the southwest as measured between groundwater monitor wells MW-1 and MW-5.

Review of the laboratory analytical results generated from analysis of the groundwater samples obtained during the monitoring period indicate that benzene and total BTEX concentrations were below the applicable NMOCD regulatory standards in all of the monitor wells on-site. PSH has not been detected on-site during any of the groundwater monitoring events. An additional groundwater monitor well is required adjacent to and down gradient of the release point in response to the NMOCD letter dated October 30, 2000, but has not been installed to date due to access restrictions imposed by the landowner. Contingent upon analytical results obtained from groundwater sampling of the proposed monitor well, a Site Closure Request will be submitted to the NMOCD during the calendar year 2004.

EOTT ENERGY LLC

P.O. BOX 4666
HOUSTON, TEXAS 77210-4666

March 31, 2003

Mr. Randolph Bayliss, P.E.
Hydrologist
Oil Conservation Division
State of New Mexico
1220 Sout St. Francis Drive
Santa Fe NM 87505

Dear Mr. Bayliss;

EOTT Energy, LLC is an Operator of crude oil pipelines and terminal facilities located in the state of New Mexico. EOTT actively monitors certain historical release sites exhibiting groundwater impacts, consistent with assessments and workplans developed in consultation with the New Mexico Oil Conservation Division. Consistent with the rules and regulations of the New Mexico OCD, EOTT hereby submits its annual monitoring reports for the following titled sites:

| | |
|--------------------------|---|

ETGI prepared these documents and has vouched for their accuracy and completeness, and on behalf of EOTT Energy, I have personally reviewed the documents and interviewed ETGI in order to verify the accuracy and completeness of these documents. It is based upon these inquiries and reviews that EOTT Energy submits these Annual Compliance Monitoring Reports for the above 15 facilities.

I look forward to scheduling a meeting with you in the second or third week of March as you schedule allows, which will allow for an opportunity to review and discuss the results of the monitoring. If you have questions in the interim, please contact me at (713) 993-5047.

Sincerely,

Bill Von Drehle
Director Environmental
EOTT ENERGY LLC

Cc: Frank Hernandez

RE: Annual Monitoring Reports
Various New Mexico Sites

MAR 25 2003

Mr. Vondrehle,

Please review the attached Annual Monitoring Reports for submittal to the New Mexico Oil Conservation Division (OCD). Mr. Randy Bayliss of the OCD requested a cover letter be attached to each submittal of reports or each report stating the report was prepared on behalf of EOTT Energy, LLC by Environmental Technology Group, Inc., before it can be reviewed. Upon your review, if no edits are made, please forward these reports to Mr. William C. Olson and Mr. Randy Bayliss at the address provided below. Please notify Britt Byerly or myself of your approval or if any edits need to be made. Upon notification the remaining copies of this report will be edited, if needed, and distributed according to the distribution list included in the report. If edits are required please send a cover letter stating the report was prepared on behalf of EOTT Energy, LLC by Environmental Technology Group, Inc. to be attached to both New Mexico Oil Conservation Division report copies for distribution upon completion of your edits. We regret any inconvenience this causes yourself or EOTT, but the system is imposed by the OCD. If you have any questions, or if additional information is needed, please call.

Respectfully,

A handwritten signature in black ink, appearing to read "Chance I. Johnson".

Chance I. Johnson
New Mexico Regional Manager
Environmental Technology Group, Inc.
(505) 397-4882

INTRODUCTION

Environmental Technology Group, Inc. (ETGI) is please to submit this Annual Monitoring Report on behalf of EOTT Energy, LLC (EOTT), in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998 requiring submittal of an Annual Monitoring Report by April 1 of each year. This report presents the results of quarterly groundwater monitoring events only. For reference, the Site Location Map is provided as Figure 1.

This site was opened by other environmental consultants prior to the involvement of ETGI in November 1999. Due to site excavation activities groundwater monitor well MW-3 was plugged and abandoned in November 1999. Groundwater monitoring was conducted during four quarterly monitoring events in the calendar year 2000 to assess the levels and extent of dissolved phase constituents. Groundwater monitoring events consisted of measuring static water levels in the monitor wells, purging and subsequent sampling of each well exhibiting sufficient recharge. Groundwater monitoring events were not conducted in the calendar year 2001 or 2002, as the landowner would not allow access to the site.

FIELD ACTIVITIES

Quarterly groundwater sampling was not conducted in the years 2001 and 2002 because the landowner would not grant access to the site. The site monitor wells were last gauged and sampled on March 9, May 19, August 30, and December 13, 2000. During each sampling event, the monitor wells designated to be sampled were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Groundwater was allowed to recharge and samples were obtained using disposable Teflon samplers. Groundwater samples were stored in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pate Trucking of Hobbs, New Mexico at the NMOCD licensed disposal facility NMOCD AO SWD-730.

GROUNDWATER GRADIENT

Locations of the monitor wells and the inferred groundwater gradient, as measured on December 13, 2000 are depicted on Figure 2 and Figure 3, the Groundwater Gradient Map and the NMOCD Site Map, respectively. The groundwater elevation data is provided as Table 1. Groundwater elevation contours generated from the final quarterly event of calendar year 2000 water level measurements indicate a general gradient of approximately 0.006 ft/ft to the southwest as measured between groundwater monitor wells MW-1 and MW-5. The depth to groundwater as measured from the top of the well casings ranged between 29.20 to 31.37 feet in the shallow alluvial aquifer.

LABORATORY RESULTS

Groundwater samples obtained during the calendar year 2000 sampling events were delivered to Environmental Laboratory of Texas, Midland, Texas for determination of Benzene, Toluene, Ethylbenzene and total Xylene (BTEX) constituent concentrations by EPA Method SW 846-8021B. The groundwater chemistry data is provided as Table 2 and the Laboratory Reports are provided as Appendix A.

Laboratory analytical results for the groundwater samples obtained during the calendar year 2000 monitoring period indicate that benzene and BTEX concentrations were below NMOCD regulatory standards for all of the on-site monitor wells.

SUMMARY

This report presents the results of monitoring activities for the annual monitoring period of calendar year 2000. Groundwater monitoring events were not conducted during calendar years 2001 and 2002 due to site access restrictions imposed by the landowner.

Groundwater elevation contours generated from the final quarterly monitoring event of calendar year 2000 indicate a general gradient of approximately 0.006 ft/ft to the southwest as measured between groundwater monitor wells MW-1 and MW-5.

Laboratory analytical results obtained during the calendar year 2000 monitoring period indicate that benzene and BTEX concentrations were below NMOCD regulatory standards for all of the on-site monitor wells. An additional groundwater monitor well is required at the release point in response to the NMOCD letter dated October 30, 2000, but has not been installed to date due to access restrictions imposed by the landowner. Contingent upon the laboratory results obtained from groundwater sampling of the proposed monitor well, a Site Closure Request will be submitted to the NMOCD.

INTRODUCTION

Environmental Technology Group, Inc. (ETGI) is please to submit this Annual Monitoring Report on behalf of EOTT Energy Corp. (EOTT), in compliance with the New Mexico Oil Conservation Division (OCD) letter of May 1998 requiring submittal of an Annual Monitoring Report by April 1 of each year. This report presents the results of quarterly groundwater monitoring events only. For reference, the Site Location Map is provided as Figure 1.

This site was opened by other environmental consultants prior to the involvement of ETGI in November 1999. Due to site excavation activities, groundwater monitoring well MW-3 was plugged and abandoned in November 1999. Groundwater monitoring was conducted during four quarterly monitoring events in the calendar year 2000 to assess the levels and extent of dissolved phase constituents. Groundwater monitoring events consisted of measuring static water levels in the monitoring wells, purging and subsequent sampling of each well exhibiting sufficient recharge. Groundwater monitoring events were not conducted in the calendar year 2001 as the landowner would not allow access to the site.

FIELD ACTIVITIES

Quarterly groundwater sampling was not conducted in the year 2001 because the landowner would not grant access to the site. The site monitor wells were last gauged and sampled on March 9, May 19, August 30, and December 13, 2000. During each sampling event, the monitor wells designated to be sampled were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Groundwater was allowed to recharge and samples were obtained using disposable Teflon samplers. Groundwater samples were stored in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pate Trucking of Hobbs, New Mexico at the NMOCD licensed disposal facility OCD AO SWD-730.

GROUNDWATER GRADIENT

Locations of the monitor wells and the inferred groundwater gradient, as measured on December 13, 2000 are depicted on Figure 2. The groundwater elevation data are provided in Table 1. Groundwater elevation contours, generated from the final quarterly event of calendar year 2000 water level measurements, indicated a general gradient of approximately 0.006 ft/ft to the southwest as measured between groundwater monitor wells MW-1 and MW-5. The depth to groundwater, as measured from the top of the well casings, ranged between 29.20 to 31.37 feet in the shallow alluvial aquifer.

LABORATORY RESULTS

Groundwater samples collected during calendar year 2000 sampling events were hand delivered to Environmental Laboratory of Texas, Midland, Texas for analysis of the following analytes: Benzene, toluene, ethyl benzene and total xylenes (BTEX by EPA Method SW846-8021B). The

groundwater chemistry data are provided as Table 2 and the Laboratory Reports are provided as Appendix A.

Laboratory analytical results for the groundwater samples, obtained during the calendar year 2000 monitoring period, indicated that benzene and BTEX concentrations were below method detection limits for monitor wells MW-1, MW-2, and MW-4. The Benzene and BTEX concentrations contained in the groundwater samples collected from monitor well MW-5 was below regulatory standards as determined by the NMOCD.

SUMMARY

This report presents the results of monitoring activities for the annual monitoring period of calendar year 2000. Groundwater monitoring events were not conducted in the calendar year 2001 due to site access restrictions imposed by the landowner. Groundwater elevation contours generated from the final quarterly monitoring event of calendar year 2000 indicated a general gradient of approximately 0.006 ft/ft to the southwest as measured between groundwater monitor wells MW-1 and MW-5.

Laboratory analytical results obtained during the calendar year 2000 monitoring period indicated that Benzene and BTEX concentrations were below method detection limits for monitoring wells MW-1, MW-2, and MW-4. The Benzene and BTEX concentrations contained in the groundwater samples collected from monitor well MW-5 was below regulatory standards. An additional groundwater monitor well is required at the release point in response to the OCD letter dated February 8, 2001, but has not been placed to date due to access restrictions imposed by the landowner. Contingent upon the laboratory results of the proposed monitor well, a Site Closure Request will be submitted to the NMOCD.

INTRODUCTION

Environmental Technology Group, Inc. (ETGI), on behalf of EOTT Energy Corp. (EOTT), prepared this annual report in compliance with the New Mexico Oil Conservation Division (OCD) letter of May 1998, requiring submittal of an annual report by April 1 of each year. The report presents the results of the quarterly ground water monitoring events only. For reference, the Site Location Map is provided as Figure 1.

Ground water monitoring was conducted during four quarterly events in calendar year 2000 to assess the levels and extent of dissolved phase constituents. The ground water monitoring events consisted of measuring static water levels in the monitoring wells, and purging and sampling of each well exhibiting sufficient recharge.

FIELD ACTIVITIES

The site monitoring wells were gauged and sampled on March 9, May 19, August 30, and December 13, 2000. During each sampling event, the monitoring wells, designated to be sampled, were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Ground water was allowed to recharge and samples were obtained using disposable Teflon samplers. Water samples were stored in clean, glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pate Trucking, Hobbs, New Mexico, utilizing a licensed disposal facility (OCD AO SWD-730).

GROUND WATER GRADIENT

Locations of the monitoring wells and the inferred ground water gradient, as measured on December 13, 2000, are depicted on Figure 2, the Site Ground Water Gradient Map. The ground water elevation data are provided as Table 1. Ground water elevation contours, generated from the final quarterly event of calendar year 2000 water level measurements, indicated a general gradient of approximately 0.006 ft/ft to the southwest as measured between ground water monitoring wells MW-1 and MW-5. The depth to ground water, as measured from the top of the well casing, ranged between 29.20 to 31.37 feet for the shallow alluvial aquifer.

LABORATORY RESULTS

Ground water samples collected during the sampling events were hand delivered to Environmental Laboratory of Texas, Midland, Texas for determination of benzene, toluene, ethyl benzene and total xylenes (BTEX) concentrations by EPA Method SW846-8021B. The ground water chemistry data are provided as Table 2 and the Laboratory Reports are provided as Appendix A.

Laboratory results for all of the site ground water samples, obtained during the calendar year 2000 monitoring period, indicated that Benzene and BTEX concentrations were below method detection limits for monitoring wells MW-1, MW-2, and MW-4. The Benzene and BTEX

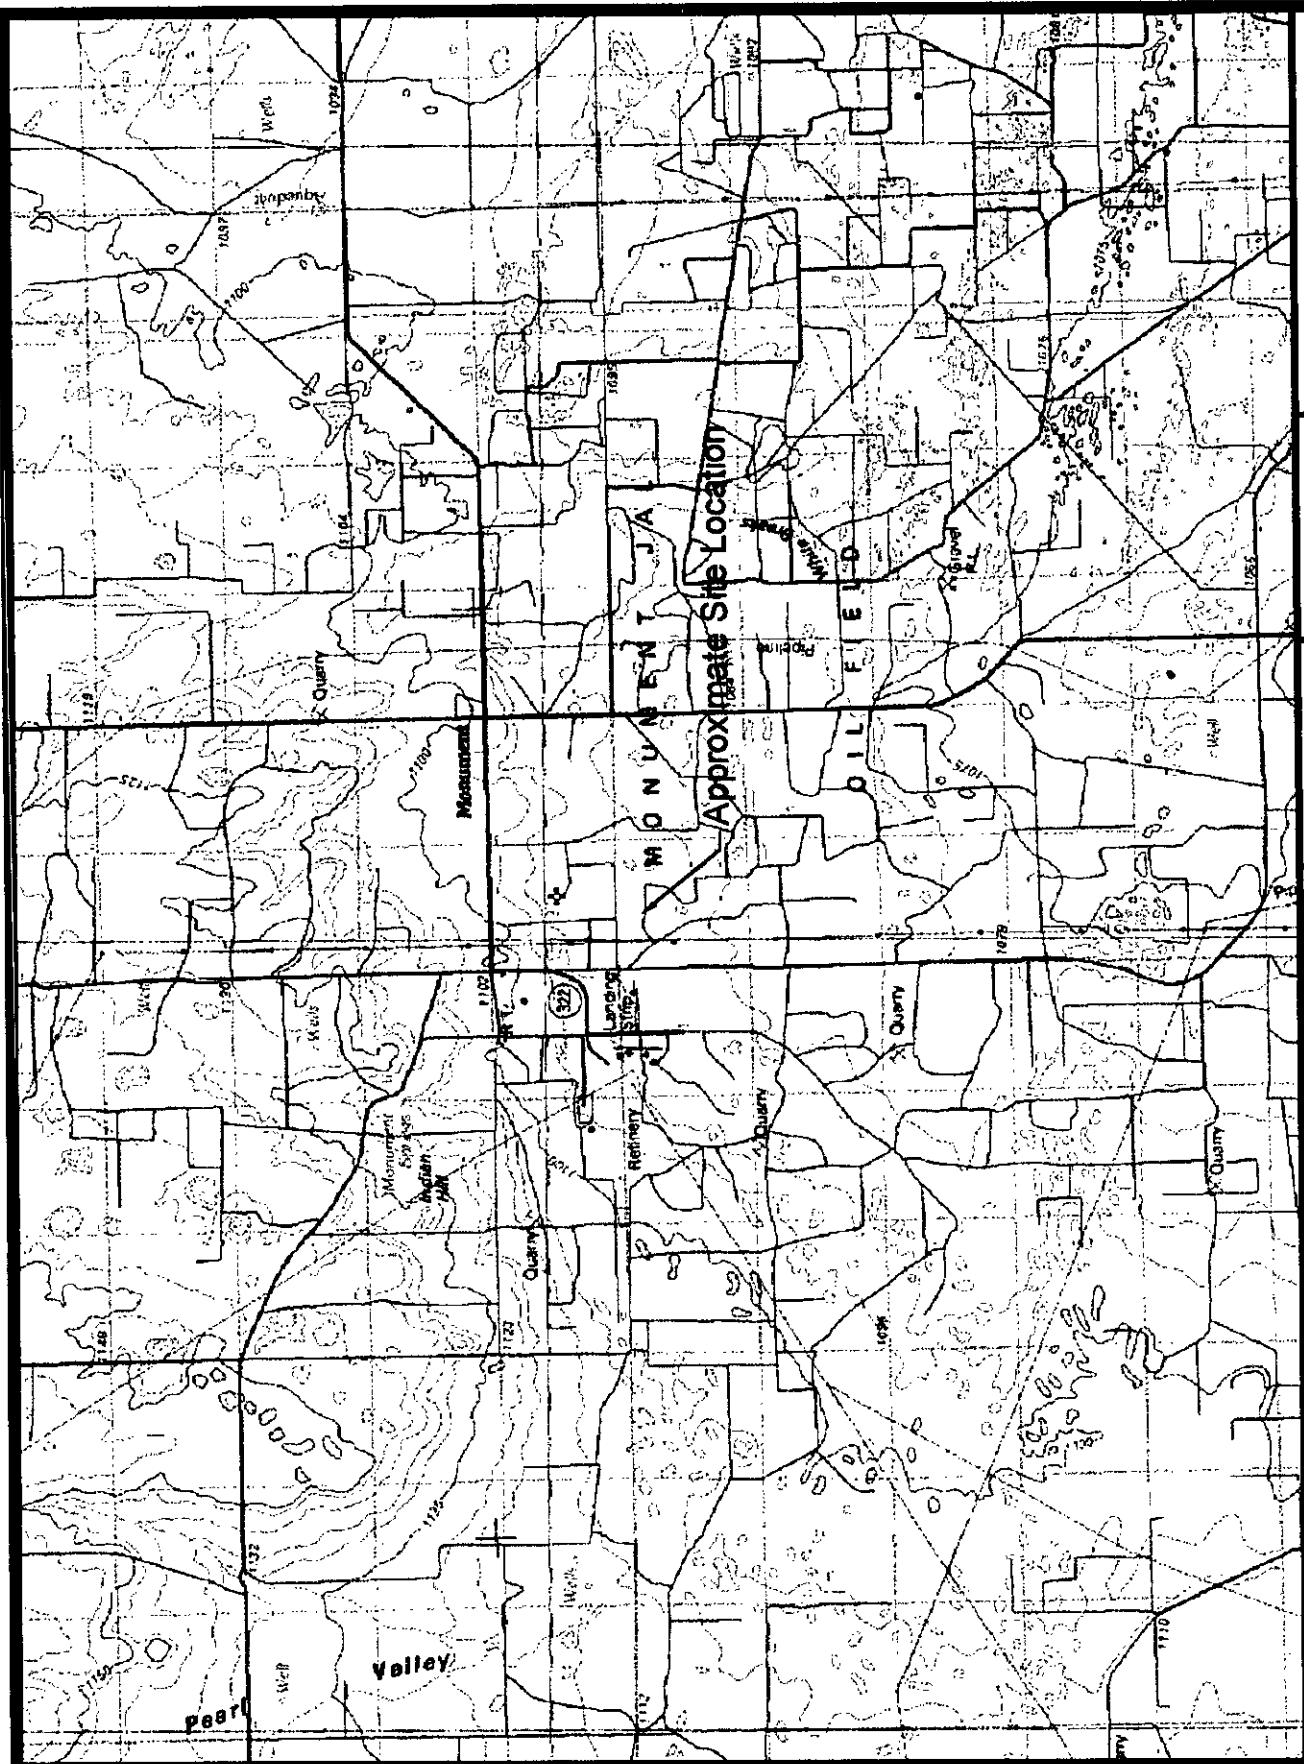

concentrations contained in the ground water samples collected from monitoring well MW-5 were below regulatory standards.

SUMMARY

This report presents the results of monitoring activities for the annual monitoring period of calendar year 2000. Ground water elevation contours, generated from the final quarterly event of calendar year 2000 water level measurements, indicated a general gradient of approximately 0.006 ft/ft to the southwest as measured between ground water monitoring wells MW-1 and MW-5.

Laboratory results for all of the site ground water samples, obtained during the calendar year 2000 monitoring period, indicated that Benzene and BTEX concentrations were below method detection limits for monitoring wells MW-1, MW-2, and MW-4. The Benzene and BTEX concentrations contained in the ground water samples collected from monitoring well MW-5 were below regulatory standards. An additional ground water monitoring well is scheduled to be installed at the release point in response to the OCD letter dated February 8, 2001. Contingent upon the laboratory results of the proposed monitoring well, a site closure request will be submitted to the OCD in the near future.

INTRODUCTION

Environmental Technology Group, Inc. (ETGI), on behalf of EOTT Energy Corp. (EOTT), prepared this annual report in compliance with the New Mexico Oil Conservation Division (OCD) letter of May 1998, requiring submittal of an annual report by April 1 of each year. The report presents the results of the quarterly ground water monitoring events only. For reference, a site location map is provided as Figure 1.

Ground water monitoring was conducted during four quarterly events in 1999 to assess the levels and extent of dissolved phase and free phase petroleum hydrocarbon constituents. The groundwater monitoring events consisted of measuring static water levels in the monitoring wells, checking for the presence of phase-separated hydrocarbons (PSH), and purging and sampling of each well exhibiting sufficient recharge. Monitoring wells containing measurable levels of PSH were not sampled.

FIELD ACTIVITIES

The site monitoring wells were gauged and sampled on March 4, May 13, August 25, and November 30, 1999. During each sampling event, the monitoring wells, designated to be sampled, were purged of approximately 3 well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Groundwater was allowed to recharge and samples were obtained using disposable Teflon samplers. Monitoring wells with a measurable presence of PSH were not sampled. Water samples were stored in clean, glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Pace Trucking, Hobbs, New Mexico, utilizing a licensed disposal facility (OCD AO SWD-730).

GROUNDWATER GRADIENT

Locations of the monitoring wells and the inferred ground water gradient, as measured on November 30, 1999, are depicted on Figure 2. The ground water elevation data are provided as Table 1. Groundwater elevation contours, generated from the final quarterly event of 1999 water level measurements, indicated a general gradient of approximately 0.008 ft/ft to the southwest. The depth to groundwater, as measured from the top of the well casing, ranged between 29.34 to 31.79 feet for the shallow alluvial aquifer. There was no PSH detected in the monitoring well.

LABORATORY RESULTS

Ground water samples obtained during the first and second sampling events were mailed to Xenco Laboratories in San Antonio, Texas. Ground water samples collected during the third and fourth event were hand delivered to Environmental Laboratory of Texas, Midland, Texas for determination of benzene, toluene, ethyl benzene and total xylenes (BTEX) concentrations by EPA Method SW846-8020 and 8021B. The ground water chemistry data are provided as Table 2 and the Laboratory Reports are provided as Appendix A.

Laboratory results for all of the site ground water samples, obtained during the 1999 annual period, indicated that BTEX concentrations were below detection limits for samples collected from MW-1, MW-2, MW-4, and MW-5 during the first sampling event. Subsequently, BTEX concentrations in samples collected from monitoring wells MW-1, MW-2 and MW-4 remained below detection limits, while the samples from monitoring well MW-5 ranged from 0.005 ml/L to 0.029 ml/L BTEX during the remaining sampling events.

SUMMARY

This report presents the results of monitoring activities for the annual monitoring period of calendar year 1999. No PSH was detected in the site well during the four monitoring events.

Laboratory results for all of the site ground water samples, obtained during the 1999 annual period, indicated that BTEX concentrations were below detection limits for samples collected from MW-1, MW-2, MW-4, and MW-5 during the first sampling event. Subsequently, BTEX concentrations in samples collected from monitoring wells MW-1, MW-2 and MW-4 remained below detection limits, while the samples from monitoring well MW-5 ranged from 0.005 ml/L to 0.029 ml/L BTEX during the remaining sampling events.

Dear S. Grover/ T. Nix:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with XENCO Chain of Custody Number -90927.r All results being reported to you apply only to the samples analyzed, properly identified with a Laboratory ID number. This letter documents the official transmission of the contents of the report and validates the information contained within.

All the results for the quality control samples passed thorough examination. Also, all parameters for data reduction and validation checked satisfactorily. In view of this, we are able to release the analytical data for this report within acceptance criteria for accuracy, precision, completeness or properly flagged.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 3 years in our archives and after that time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in COC No. -90927r will be filed for 60 days, and after that time they will be properly disposed of without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

XENCO operates under the A2LA guidelines. Our Quality System meets ISO/IEC Guide 25 requirements which is strictly implemented and enforced through our standard QA/QC procedures.

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie L. Clemons, II".

Eddie L. Clemons, II

Project Name: EOTT
Project ID: 810044-1-0
Project Address: Lea County, NM

Dear Stan Grover:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with XENCO Chain of Custody Number -91942.v All results being reported to you apply only to the samples analyzed, properly identified with a Laboratory ID number. This letter documents the official transmission of the contents of the report and validates the information contained within.

All the results for the quality control samples passed thorough examination. Also, all parameters for data reduction and validation checked satisfactorily. In view of this, we are able to release the analytical data for this report within acceptance criteria for accuracy, precision, completeness or properly flagged.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 3 years in our archives and after that time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in COC No. -91942v will be filed for 60 days, and after that time they will be properly disposed of without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

XENCO operates under the A2LA guidelines. Our Quality System meets ISO/IEC Guide 25 requirements which is strictly implemented and enforced through our standard QA/QC procedures.

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie L. Ciemons, II".

ATTN: MR. JESSE TAYLOR
P.O. BOX 4845
MIDLAND, TEXAS 79704
FAX: 505-392-3760

Sample Type: Water
Sample Condition: Intact/ Iced/HCl
Project #: TNM 98-02
Project Name: EOT 1015C
Project Location: Monument, N.M.

Sampling Date: 11/30/99
Receiving Date: 12/02/99
Analysis Date: 12/2 & 12/3/99

| ELT# | FIELD CODE | BENZENE (mg/L) | TOLUENE (mg/L) | ETHYLBENZENE (mg/L) | m,p-XYLENE (mg/L) | o-XYLENE (mg/L) |
