STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION

PETITION FOR HEARING BEFORE
A DIVISION EXAMINER REGARDING
DIRECTOR'S DECISION ON ABATEMENT
OF EAST BLINEBRY DRINKARD UNIT

CASE NO. 26126

PRE-HEARING STATEMENT

The New Mexico Oil Conservation Division ("OCD") submits this Pre-Hearing Statement pursuant to 19.15.4.13(B) NMAC.

I. IDENTIFICATION OF PARTY AND COUNSEL

Apache Corporation ("Apache") initiated this action by and through its counsel of record, Dalva Moellenberg. Oil Conservation Division ("OCD") is represented by Jesse Tremaine and the undersigned.

II. STATEMENT OF THE CASE

On or about March 12, 2026, OCD sent the letter attached hereto and incorporated as **Exhibit A** to Apache. As set out more thoroughly in **Exhibit A**, OCD, by and through its Environmental Bureau Chief, Rosa Romero, notified Apache that it has determined from reports submitted by Apache that groundwater has been impacted by Oil & Gas activity in excess of the standards outlined in 19.15.30.9 NMAC. OCD further notified Apache that OCD required Apache to submit an abatement plan pursuant to 19.15.30 NMAC. Apache responded, in part, by filing this case.

On or about February 19, 2025, the Oil Conservation Commission ("OCC")

entered Order No. R-23728, attached hereto and incorporated as **Exhibit B.** Thereafter, on or about April 17, 2025, OCD and Apache submitted a Joint Motion to Amend Order No. R-23728, which is attached hereto and incorporated **Exhibit C.** Apache represented in the Joint Motion that: "Following the hearing on this matter, Apache completed an additional round of groundwater monitoring including sampling and analysis of all existing monitoring wells and has reported the results to the Division. Apache and the Division have reviewed the results and additional historic information regarding the area to refine their understanding of site conditions and to attempt to identify possible sources of groundwater impacts. Based upon this information, Apache then proposed a revised plan for installation of additional groundwater monitoring wells and soil borings to meet all of the objectives of the Order, taking into account the additional information. The Division reviewed Apache's revised proposal and the parties then conferred and reached agreement on a modified plan, subject to the Commission's approval." *Id.* at p.2. Apache now seeks to avoid abatement of the contamination detected by the monitoring wells it agreed to install.

On or about June 5, 2025, OCD and Apache's Joint Motion to Amend Order No. R-23728 was unanimously granted by the OCC by Order No. R-23728-A, which is attached hereto and incorporated as **Exhibit D.** In part, the Order required Apache, as requested by Apache, to install approximately fifteen (15) groundwater monitoring wells. Apache also agreed to do soil borings on sites suspected of being a potential source for contaminants. Additional details as to the requirements of Apache's agreed testing are set out more thoroughly in **Exhibit D**. A partial

summary of samples taken both before and after the implementation of R-23728-A is attached hereto and incorporated by reference as **Exhibit E.**

The Field Activity Report referenced in **Exhibit A** is attached and incorporated hereto as **Exhibit F.** Said report, submitted to OCD by Apache, details contamination set out more thoroughly therein and led to OCD's determination that the groundwater had been impacted in excess of the standards outlined in 19.15.30.9 NMAC. Generally, OCD contends that Apache caused a release which was reported to OCD by Apache. Test results revealed that a release breached the vadose zone and entered groundwater, taking the matter beyond a typical "dig and haul" surface closure. 19.25.29.11 NMAC. OCD determined the release has caused water pollution in excess of allowable standards, causing a shift to abatement rules from the surface spill rule. 19.15.29.12 NMAC; 19.15.30 NMAC. Abatement is required when groundwater quality standards exceed legally allowable levels, as indicated by **Exhibit F**. 19.15.30.9 NMAC. Apache is a responsible party for the contamination and required abatement. 19.15.2 NMAC; 19.15.29.6 NMAC; 19.15.29.7 NMAC; 19.15.30.7. OCD properly mandated abatement pursuant to 19.15.29.12 and 19.15.30.11 NMAC.

III. PROPOSED EVIDENCE

WITNESSES:

1. Rosa Romero, OCD Environmental Bureau Chief

Testifying by live testimony

Ms. Romero is OCD's Environmental Bureau Chief. She has served with OCD in her current role since April of 2022. Ms. Romero's experience is more

thoroughly described in **Exhibit K**. She will testify regarding the procedural history of this matter, the rules associated with OCD's determination that Apache complete an abatement plan, the exhibits attached hereto, and other matters set out herein or potentially arising from the testimony of Apache's witnesses.

2. Brittany Hall, Environmental Supervisor-Environmental Field Compliance Group

Testifying by live testimony

Ms. Hall is an Environmental Supervisor in the Environmental Field Compliance Group at OCD and has served in that capacity for more than one year. She previously served as an Environmental Specialist at OCD since August of 2022. Her experience is more thoroughly set out in **Exhibit L**. She has knowledge of the testing, results, and day to day interactions between OCD and Apache. She will testify to many of the exhibits attached hereto, including **Exhibits G-I**. She may also testify to other matters that arise from the testimony of Apache's witnesses.

EXHIBITS:

Exhibit A	**March 12, 2026 letter from Rosa Romero to Apache**
Exhibit B	**OCC Order No. R-23728**
Exhibit C	**Joint Motion to Amend Order No. R-23728**
Exhibit D	**OCC Order No. R-23728-A**
Exhibit E	**Summary of Analytical Results**
Exhibit F	**Field Activity Report**
Exhibit G	**Timeline**
Exhibit H	**Map of wells near EBDU #37**
Exhibit I	**List of Wells around EBDU #37**
Exhibit J	**Sampling Event- Groundwater Gauging Data**

Exhibit K **CV of Rosa Romero**

Exhibit L **CV of Brittany Hall**

PROCEDURAL MATTERS

OCD has not identified any procedural matters to be resolved prior to the hearing.

Respectfully submitted,

Michael Hall
Assistant General Counsel
New Mexico Energy, Minerals, and Natural Resources Department

RE: Notification of Abatement for nDHR1922141227 East Blinebry Drinkard Unit #037, located in Unit letter E, Section 12, Township 21S, R37E

Dear Mr. Bole:

The New Mexico Oil Conservation Division (OCD) has reviewed Apache Corporation OGRID 873's (Apache) *Field Activity Report* submitted November 11, 2025, under application ID: 528526 for the East Blinebry Drinkard Unit (EBDU) #37, Incident ID# nDHR1922141227.

OCD has determined from the submitted report that groundwater has been impacted by Oil & Gas activity in excess of the standards outlined in 19.15.30.9 NMAC. Pursuant to 19.15.30 NMAC, OCD is requiring Apache to submit an abatement plan pursuant to 19.15.30.11 NMAC and Subsection A of 19.15.30.14 NMAC. Apache must submit a complete Stage 1 Abatement Plan proposal to OCD Permitting within 60 days of receipt of this letter. 19.15.30.13 A. NMAC. Apache may submit stage 1 and stage 2 abatement plan proposals together.

The public may view a copy of the *Field Activity Report* and the conditions online from OCD permitting under Incident ID# nDHR1922141227 at http://www.emnrd.state.nm.us/ocd/.

If Apache Corporation has any questions or concerns regarding this letter, please contact Brittany Hall at (505) 517-5333 or Brittany.Hall@emnrd.nm.gov.

Sincerely,

RosaM Romero

Rosa Romero
Environmental Bureau Chief

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION COMMISSION

APPLICATION OF APACHE CORPORATION FOR AN ADJUDICATION HEARING TO CONTEST THE DIVISION'S CONDITIONS OF APPROVAL ON APACHE CORPORATION'S SCOPE OF WORK FOR ADDITIONAL INVESTIGATION, LEA COUNTY, NEW MEXICO,

ORDER NO. R-23728
CASE NO. 24912

FINAL COMMISSION ORDER

This matter, having come before the Oil Conservation Commission ("Commission") on the referral of the Oil Conservation Division Director pursuant to Sections 70-2-6(B) and 70-2-11(B) NMSA 1978 of the Oil and Gas Act ("the Act"), and the Commission, having considered the testimony and other evidence of the parties presented before it at a hearing before the Commission on January 16 and 17, 2025, and having considered the closing statements of both parties, hereby finds, concludes, and orders as follows:

A. FINDINGS OF FACT SUPPORTED BY A PREPONDERANCE OF THE EVIDENCE:

1. The inception of this matter occurred when a release, or releases, of produced water was first reported to the Oil Conservation Division ("the Division") by Apache Corporation ("Apache") in July 2019. The report, on Division Form C-141, noted Apache as the responsible party.

2. The reported release occurred at a location known as the East Blinebury Drinkard Unit #037 ("the Site"), arising from oil and gas operations by Apache conducted pursuant to permit API 30-025-06556 ("the Permit"). However, according to its witness Larry Baker, it "had no idea what was lost."

3. As reflected in the aforementioned report, Apache solely owned and operated the Site and infrastructure thereon.

4. In this initial disclosure, Apache stated that it undertook all actions required to stop the release, contain the release, and secure and remediate the Site as required pursuant to 19.15.29.8.C NMAC.

5. In December 2019, based on the information before it at the time, the Division approved Apache's work plan for the Site, which included, *inter alia*, the installation of five (5) monitoring wells, including the aforementioned windmill.

6. Apache submitted a closure report to the Division dated February 9, 2021. *Apache Exhibit A-5*. It noted a "produced Water Spill." It disclosed exceedances of chloride in a majority of its soil samples and well samples. It described the area affected by the release as "approximately 25,000 square feet or 0.57 acres." It also proposed a remediation plan that consisted of limited soil excavation.

7. Based on subsequent soil samples from Apache that reflected increased chloride exceedances, in August, 2020, the Division approved modification of Apache's remediation plan, including the installation of several additional monitoring wells.

8. Beginning in June, 2022, the Division received correspondence from a neighboring landowner expressing concern that the approved remediation and closure plan would allow contamination of local groundwater, including sources of fresh water. *Division Exhibit 2*.

9. From July 2022 to shortly before Apache's request for a hearing, Apache provided additional data from its existing monitoring wells that reflected elevated levels of chlorides and total dissolved solids ("TDS") above normal exceedances, consistently

increasing in both scope and amount from what was previously disclosed previously to the Division. The most recent disclosures by Apache occurred in late 2024, again reflecting continuing increases in both scope and amount of chloride and TDS exceedances, including chloride exceedances over twenty times the established limits for groundwater. *Testimony of Brandon Powell, Tr. at 339.*

10. Chlorides do not break down in the environment.

11. In contrast to Apache's initial characterization of the scope of the release, the area contaminated from the release currently contains approximately 2.6 million square feet, or approximately 60 acres.

12. Based on the expertise of the Commission, the aforementioned exceedances reflect injury and damage to neighboring land, and a danger and threat to local sources of fresh water, public health, and the environment.

13. Apache cannot explain or identify the source contamination causing the exceedances of chloride and TDS from samples within the impacted area. Nor can the Division identify the source of the release or releases, or fully delineate the contamination on the Site.

14. Apache cannot estimate the volume of produced water necessary to cause the level of contamination observed in the ground water samples. In particular, Apache cannot explain or estimate the release volume causing the 'spike' in samples taken in October of 2024. Nor can Apache rule out a current and active release based on the increasing exceedances, or otherwise explain the cause of these increasing exceedances.

15. Apache does not contend that the release, or releases, have been contained.

16. Apache cannot explain what it concedes are "puzzling" non-tandem

patterns of chloride and TDS exceedances, which usually appear in tandem.

17. From approximately July 2022 through May, 2024, the Division and Apache attempted to reach consensus on a new scope of work that would fully address the Division's concerns regarding contamination and remediation, with increasing numbers of monitoring wells proposed by both sides. This process culminated in a final submission by Apache in approximately September 2024. The Division rejected Apache's proposal as not addressing all the Division's concerns. Apache then elected to pursue an appeal. The Division Director then referred the appeal to the Commission pursuant to Section 70-2-6(B) of the Act.

18. Based on the expertise of the Commission and its review of the evidence before it, the source or sources of groundwater contamination, and the likely future extent of the contamination from those sources, cannot be ascertained at this time with a reasonable degree of scientific certainty and requires additional monitoring as provided in this order.

19. The information currently available does not allow a full characterization of the contamination at the Site.

20. In light of the aforementioned and undisputed release or releases by Apache as the responsible party, and the exceedances resulting therefrom, the following final conditions of approval ("Final COA") attached as **Exhibit A** to this Order shall be a condition of the Permit. The Final COA is reasonably necessary to minimize further injury and damage to neighboring land, to reasonably assess the danger and threat to local sources of fresh water, public health, and the environment, and to provide additional water and soil samples which are necessary to identify sources of contamination that may be migrating to

groundwater and to facilitate a remediation plan.

21. The proposed wells in the Final COA are located to include areas either where the horizontal extent of the chloride plume is not fully delineated or within large gaps between existing wells with elevated samples, or to otherwise provide more predictive information regarding the extent of future contamination in the judgment of the Commission. In the individual wells listed as **1a** through **1m** in **Exhibit A**, the Commission provides additional justification for each location.

22. The Final COA differs from the Division's proposal in its closing argument in two respects. First, the Division's proposed well at "1b" was withdrawn by the Division but is included in the Final COA and moved 200 ft East of the windmill. Second, the well proposed by the Division at "1k" (now "1j" in **Exhibit A**) shall be moved to 200 ft Southwest of TMW 19.

23. The Final COA otherwise adopts the Division's proposal, including the strikethroughs included therein.

24. Based on the procedural basis of this appeal, the Commission does not consider at this time what further abatement and remediation may be required as a condition of the Permit, or whether the release or releases presented in this hearing constituted major or minor releases as defined at 19.15.29.7.A and B NMAC. Rather, the Commission is approving a scope of work that includes a monitoring plan that will facilitate a full assessment of the extent of the release or releases, and that will ultimately facilitate a proper remediation plan. Prior to that determination, and due to substantial gaps in knowledge of the release(s), continued investigation is necessary. The Final COA is reasonably calculated to provide such knowledge.

B. CONCLUSIONS OF LAW:

1. Pursuant to NMSA 1978, Section 70-2-6(B) of the Act, the Division and the Commission shall have "concurrent jurisdiction…to the extent necessary for the Commission to perform its duties as required by law."

2. Pursuant to NMSA 1978, Section 70-2-12(B)(7) (15) and (21) of the Act, the Commission, in exercising its aforementioned concurrent jurisdiction, shall:

> (7) to require wells to be drilled, operated and produced in such manner as to prevent injury to neighboring leases or properties…
>
> (15) to regulate the disposition, handling, transport, recycling, treatment and disposal of produced water during, or for reuse in, the exploration, drilling, production, treatment or refinement of oil or gas, including disposal by injection pursuant to authority delegated under the federal Safe Drinking Water Act, in a manner that protects public health, the environment and fresh water resources…
>
> (21) to regulate the disposition of nondomestic wastes resulting from the exploration, development, production or storage of crude oil or natural gas to protect public health and the environment.

3. Pursuant to 19.15.29.8.A NMAC, releases arising from oil and gas operations are prohibited.

4. Pursuant to 19.15.29.8.B NMAC, the operator responsible for a release shall remediate it.

5. Pursuant to 19.15.29.8.C NMAC, such remediation requires the following immediate actions:

> (1) **Source elimination and site security.** The responsible party must take appropriate measures to stop the source of the release and limit access to the site as necessary to protect human health and the environment.
> (2) **Containment.** Once the site is secure, the responsible party must contain the materials released by construction of berms or dikes, the use of absorbent pads or other containment actions to limit the area affected by the release and prevent potential fresh water contaminants from migrating to watercourses or areas that could pose a threat to public health and

> environment. The responsible party must monitor the containment to ensure that it is effectively containing the material and not being degraded by weather or onsite activity.
> (3) **Site stabilization.** After containment, the responsible party must recover any free liquids and recoverable materials that can be physically removed from the surface within the containment area. The responsible party must deliver material removed from the site to a division-approved facility.
> (4) **Remediation.** The responsible party may commence remediation immediately.

6. Pursuant to 19.15.29.8 NMAC, Apache is the operator responsible for the release and the responsible party.

7. Pursuant to 19.15.29.11.C NMAC:

> If the division determines that more information is needed to understand the character of the release and its potential impact on fresh water, public health and the environment, the division may request the responsible party submit additional information. Should the division request additional information, it must do so in writing to the responsible party within 30 days from receipt of the characterization report or remediation plan with what specific information the division is requesting and reasons why the additional information is needed. The responsible party has 14 days to respond to a written request for additional information. If the responsible party disagrees with the request for additional information, it may consult with the division, or file an application for hearing pursuant to 19.15.4 NMAC within 30 days of the issuance of the request for additional information.

8. To the extent that the Division requested more information from Apache after Apache repeatedly updated its information regarding chloride and TDS exceedances, the Division did so pursuant to 19.15.29.11.C NMAC.

9. The Final COA attached as **Exhibit A** is reasonably necessary to satisfy the Commission's obligations pursuant to Section 70-2-12(B), subparagraphs (7) (15) and (21) of the Act, as cited above, and to facilitate compliance with the above-cited rules at 19.15.29 NMAC.

10. This order does not preclude further amendments to the Permit in

accordance with the Act.

C. ORDER:

1. The Final COA attached as **Exhibit A** hereto shall be enforceable by the Division pursuant to 19.15.5.11 NMAC.

2. Pursuant to Section 70-2-25 of the Act, within twenty (20) days after entry of this order, a party of record adversely affected may file with the Commission an application for rehearing in respect of any matter determined by the order or decision, setting forth the respect in which the order or decision is believed to be erroneous. The commission shall grant or refuse the application in whole or in part within ten days after the application is filed, and failure to act on the application within that period shall be deemed a refusal and final disposition of that application. In the event the rehearing is granted, the commission may enter a new order or decision after rehearing as may be required under the circumstances. A party of record to the rehearing proceeding dissatisfied with the disposition of the application for rehearing may appeal to the district court pursuant to the provisions of Section 39-3-1.1 NMSA 1978.

SO ORDERED.

Gerasimos Razatos, Acting Chairman
New Mexico Oil Conservation Commission

EXHIBIT A – FINAL CONDITIONS OF APPROVAL

As part of Permit API 30-025-06556, Apache Corporation must commence the following within ninety (90) days of the date of this Order. The coordinates for each additional monitoring well are included in conditions 1. (a through n).

1a. TMW-30 shall be installed approximately 430 feet east of the TMW-28 well proposal, and 50 feet south. Better defining background concentrations. (32.482591, -103.120003)

1b. TMW-31 shall be installed approximately 200 feet east of the Windmill.

1c. TMW-32 shall be installed approximately 275 feet east of TMW-12. Reduces distance between adjacent wells for more precise characterization. (32.481354, -103.119876)

1d. TMW-33 shall be installed approximately 415 feet southwest of TMW-22. Reduces the distance between TMW-21 and TMW-13 for more precise characterization. (32.480643, - 103.118728)

1e. TMW-34 shall be installed approximately 350 feet west of TMW-14. Achieves more characterization near TMW-17 which conveys a high chloride level. (32.479492, - 103.120080)

1f. TMW-35 shall be installed approximately 190 feet northeast of TMW-15 Addresses more necessary characterization near TMW-17 (32.479341, - 103.119302)

1g. TMW-36 shall be installed approximately 175 feet southwest of TMW-17. Addresses need for more characterization near TMW-17 (32.478749, -103.120871)

1h. TMW-37 shall be installed approximately 275 feet southeast of TMW-17. Addresses need for more characterization near TMW-17. (32.478577, -103.119850)

1i. TMW-38 shall be installed approximately 300 feet northwest of proposed TMW-26.
More characterization and assessment needed in the southeast region of the release area. (32.477683, -103.119429)

1j. TMW-40 shall be installed approximately 200 feet southeast of TMW-19. Addresses lack of characterization and assessment between MW-19 and MW-18

1k. TMW-41 shall be installed approximately 275 feet east of TMW-24. Addresses lack of characterization and assessment between TMW-24 and TMW-23 (32.476499, - 103.121560)

1l. TMW-42 shall be installed approximately 220 feet east of TMW-23. Addresses lack of characterization and assessment between TMW-25 and TMW-26 (32.476456, - 103.119774)

1m. TMW-42 shall be installed approximately 75 feet NE of TMW-13. Addresses lack of characterization between TMW-13 and TMW-22. (32.4811185, -103.1189847)

2. The windmill well must be sampled and analyzed for barium in the next round of groundwater monitoring.
3. All additional monitoring wells must be logged by a qualified person and have soil sample analyses for TPH, chloride, and BTEX by EPA Methods 8260, EPA Method 300 and EPA Method 8015. Five (5) foot interval composite samples are acceptable.
4. Drilling for all wells is required to commence within ninety (90) days from this date of this Order.
5. Add an additional well located approximately halfway between the Windmill well and TMW-17.
6. Add an additional well located 200’ directly due west of TMW-19.
7. Include general chemistry water analysis on all samples including Cation/Anion results to understand TDS exceedances that are not chloride related.
8. In the next sampling event, sample all wells for the following 20.6.2.3103 NMAC constituents; (add all constituents with exceedances or which were not yet tested for)
    a. Barium, Cyanide, Boron, due to exceedances of their regulatory limits.
    b. Pentachlorophenol, atrazine, Ethylene dibromide (EDB) also known as 1,2-Dibromoethane as these constituents were either not previously analyzed or had reporting limits and/or minimum detection limits that are above the regulatory limits.
    c. Temperature and pH must be analyzed for in the field as they were reported out of hold time.
9. Apache shall complete and sample each additional well within thirty days of completion of drilling.
10. Apache must continue taking quarterly sampling and provide the results to the Division via the online permitting system. Results received by Apache must be submitted within 30 days, even if the report is still pending or waiting on additional results.
11. Apache shall include all field notes and calibration logs for field equipment used during groundwater monitoring events in all subsequent reports submitted through the OCD permitting system.

EXHIBIT C

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION COMMISSION

APPLICATION OF APACHE CORPORATION FOR AN ADJUDICATORY HEARING TO CONTEST THE DIVISION'S CONDITIONS OF APPROVAL ON APACHE CORPORATION'S SCOPE OF WORK FOR ADDITIONAL INVESTIGATION, LEA COUNTY, NEW MEXICO

CASE NO. 24912

APACHE CORPORATION AND THE OIL CONSERVATION DIVISION'S JOINT MOTION TO AMEND ORDER NO. R-23728

Apache Corporation ("Apache") and the Oil Conservation Division (the "Division"), (the "Parties") by and through their respective counsel, hereby respectfully submit to the Oil Conservation Commission (the "Commission") this Joint Motion to Amend Order No. R-23728 for the reasons specified herein.

1. This matter came before the Commission on the referral of the Division pursuant to NMSA 1978, Sections 70-2-6(B) and 70-2-11(B) of the Oil and Gas Act. The Commission held an adjudicatory hearing on this matter pursuant to 19.15.4 NMAC on January 16 and 17, 2025. Following the adjudicatory hearing, the Commission entered its findings, conclusions, and orders on February 19, 2025, in Order No. R-23728 ("Order") and Exhibit A – Final Conditions of Approval ("Order Ex. A"), attached as pages 9 and 10 of the Order. The Final Conditions of Approval relate to the Division's approval of Apache's proposal dated May 8, 2024, which proposed five new monitoring wells designated as TMW-25 to TMW-29.

2. Following the Commission's Order, Apache submitted its Application for Rehearing pursuant to NMSA 1978, Section 70-2-25(A) and 19.15.4.25 NMAC to the Commission on March 11, 2025. The Commission did not respond to Apache's Application for

Rehearing, and therefore the Commission's Order became a final disposition of Apache's Application to contest the Division's Conditions of Approval on March 25, 2025.

3. Following the hearing on this matter, Apache completed an additional round of groundwater monitoring including sampling and analysis of all existing monitoring wells and has reported the results to the Division. Apache and the Division have reviewed the results and additional historic information regarding the area to refine their understanding of site conditions and to attempt to identify possible sources of groundwater impacts. Based upon this information, Apache then proposed a revised plan for installation of additional groundwater monitoring wells and soil borings to meet all of the objectives of the Order, taking into account the additional information. The Division reviewed Apache's revised proposal and the parties then conferred and reached agreement on a modified plan, subject to the Commission's approval.

4. The revised plan jointly presented by Apache and the Division for the Commission's approval is presented in "Exhibit A – Modified Final Conditions of Approval" to this motion and, if approved, will replace Order Ex. A. Apache and the Division agree that this plan meets the objectives stated in the Order, provides equal or better spatial coverage to delineate groundwater conditions at the site, and modifies some well locations to reduce the risk of potential cross-contamination. This revised plan includes plans to drill a total of fifteen (15) monitoring wells and two (2) soil borings for further delineation and to ascertain the contents of the soils identified by the Division as areas of concern.

5. The fifteen wells specified in the Modified Conditions of Approval include (1) six monitoring well locations specified in Order Ex. A (TMW-31, TMW-33, TMW-34, TMW-36, TMW-37, and TWM-40); (2) three monitoring wells from Apache' September 23, 2024 proposal

(TMW-27, TMW-28, and TMW-30[1]); and (3) six new well locations that represent changes to the locations of some of the wells specified in Order Ex. A. Based on these changes, wells TMW-35 and TMW-42 as identified in the Final Conditions of Approval 1f and 1m, and wells TMW-25, TMW-26 and TMW-29 as identified in the May 8, 2024 Apache proposal will no longer be required as their purposes are addressed by other wells or soil boring locations.

6. The six "New" well locations relate to the following wells as specified in Order Ex. A: "New 1" (32.4825050°, -103.119588°) is a modification (approximately 100 feet east) of the well identified as TMW-30 in Order Ex. A and is moved to better define background conditions; "New 2" (32.481600°, -103.119705°) is a modification (approximately 150 feet east) of the well identified as TMW-32 in Order Ex. A and is moved to reduce the distance between adjacent wells for more precise characterization; "New 3" (32.477701°, -103.123321°) is a modification (approximately 150 feet west) of the well required in Condition 6 of Order Ex. A to provide delineation of the plume boundary to the west of well TMW-19); "New 4" (32.477662°, -103.118673°) is a modification (approximately 250 feet southeast) of the well identified as TMW-38 in the Order Ex. A and is to provide characterization in the southeast part of the site; "New 5" (32.475958°, -103.121591°) is a modification (approximately 200 feet south) of the well identified as TMW-41 in Order Ex. A and is to provide characterization at the southern extent of the release area; and "New 6" (32.475825°, -103.119373°) is a modification (approximately 200 feet southeast) of first of the two wells identified as TMW-42 in Order Ex. A and is to provide downgradient characterization at the southeastern extent of the release area. Generally, the purpose of these six wells is to define the perimeter of the plume.

[1] This well TMW-30 is at a much different location than well TMW-30 as referenced in the Order Ex. A. It is near the location of well TMW-39 as referenced in OCD's Conditions of Approval, which was not included in Order Ex. A.

7. Here is a comparison of the wells specified in the numbered conditions of Order Ex. A with those specified in the attached Modified Conditions of Approval:

Order Ex. A	Modified Conditions
1a: TMW-30	New 1
1b: same as Condition 5	TMW-31
1c: TMW-32	New 2
1d: TMW-33	TMW-33 with modified location
1e: TMW-34	No change
1f: TMW-35	Omitted
1g: TMW-36	No change
1h: TMW-37	No change
1i: TMW-38	New 4
1j: TMW-40	No change
1k: TMW-41	New 5
1l: TMW-42	New 6
1m: TMW-42	Omitted
5: ½ way between TMW-17 and windmill	TMW-31 (same as 1b)
6: 200’ west of TMW-19	New 3

8. The Division has identified areas of concern which Apache and the Division seek to address through soil boring and sampling as well as strategic placement of groundwater monitoring wells. Specifically, the locations for proposed monitoring wells TMW-42 (condition 1m) and TMW-30/TMW-39 were selected by the Division in areas devoid of vegetation and identified as possible historic sources of contaminants detected in groundwater. The Division and

Apache agreed that soil borings will be drilled in these locations, as described in Exhibit A hereto. Soil borings will enable evaluation of the soil column without creating a potential conduit to the groundwater. TMW-42 (condition 1m) will not be installed given the presence of existing TMW-13, proposed well New 2, and proposed well TMW-13. TMW-30 will be installed approximately 70 feet south of the location for the boring in this location.

9. Attached as Exhibit "B" hereto is a map to illustrate the locations of the wells and soil borings as specified in Exhibit "A" hereto.

10. The specifications for groundwater sampling and chemistry analysis are unchanged from requirements set forth in the Commission's Order Ex. A, and are in Condition 3 a-h of Exhibit "A" hereto.

11. Apache will comply with the deadlines for sampling and report submission as set forth by the Division.

12. The revised Conditions of Approval, attached as Exhibit A, shall be enforceable by the Division pursuant to 19.15.5 NMAC. Apache may submit a revised technical plan, in conformance with the Modified Conditions of Approval, with additional details for the Division's approval.

13. Apache and the Division respectfully request that the Commission amend Order No. R-23728 to replace "Exhibit A – Final Conditions of Approval" with the Modified Conditions of Approval attached hereto as "Exhibit A – Modified Final Conditions of Approval." Apache and the Division also respectfully request that the Commission amend Order No. R-23728 to reflect that "The Division may administratively extend deadlines related to drilling or sampling activities specified in this Order and may approve minor adjustments of well locations for good cause shown."

14. Apache agrees to waive its right to appeal the Order if the Commission grants this Joint Motion.

15. Pursuant to NMSA 1978, Sections 70-2-23 and 10-15-1(B), the Parties respectfully request that the Commission set this matter for hearing on its calendar during the week of April 21 to April 25, 2025.

WHEREFORE, the Parties respectfully request that the Commission grant their Joint Motion to Amend Order No. R-23728 to reflect the contents of Exhibit A, attached, and grant a hearing as stated in Paragraph 15, *supra*.

Respectfully submitted,

GALLAGHER & KENNEDY, PA

EXHIBIT A

Exhibit A: Modified Final Conditions of Approval

1. As part of Permit API 30-025-06556, Apache Corporation must commence the following within ninety (90) days of the date of the Oil Conservation Commission's Order granting the Joint Motion to Amend Order No R-23728. The coordinates for each monitoring well are included below. Groundwater Monitoring Wells:

    a. TMW-27 (32.479989°, -103.120675°) will serve to confirm the chloride plume is continuous between the source (near TMW-7) and TMW-17, which has shown elevated chlorides in recent sampling.

    b. TMW-28 (32.482492°, -103.121341°) will provide upgradient delineation. This well will be located approximately 750 feet upgradient of the source.

    c. TMW-30 (32.477327°, -103.120154°) will be located approximately 200 feet southeast of TMW-18 to provide information on stratigraphy and groundwater chemistry in the space between current TMW-18, TMW-23, and proposed New 4. This is the location identified as TMW-39 from the original OCD Conditions of Approval.

    d. TMW-31 (32.479032°, -103.121434°) will be installed approximately 200 feet east of the Windmill. This well is also requested in condition 5 of the OCD final order.

    e. TMW-33 (32.480650, - 103.118951) will be installed approximately 415 feet southwest of TMW-22. Reduces the distance between TMW-21 and TMW-13 for more precise characterization.

    f. TMW-34 (32.479492, - 103.120080) will be installed approximately 350 feet west of TMW-14. Achieves more characterization near TMW-17.

    g. TMW-36 (32.478749, -103.120871) will be installed approximately 175 feet southwest of TMW-17. Addresses need for more characterization near TMW-17

    h. TMW-37 (32.478577, -103.119850) will be installed approximately 275 feet southeast of TMW-17. Provides additional characterization near TMW-17.

    i. TMW-40 (32.477265°, -103.121711°) will be installed approximately 200 feet southeast of TMW-19. Addresses lack of characterization and assessment between TMW-19 and TMW-18

    j. New 1 (32.482505°, -103.119588°) This is a modification (approximately 100 feet east) of the OCD final order well TMW-30. Better defines background concentrations.

    k. New 2 (32.481600°, -103.119705°) This is a modification (approximately 100 feet northeast) of the OCD final order well TMW-32. Reduces distance between adjacent wells for more precise characterization.

    l. New 3 (32.477701°, -103.123321°) This is a modification (approximately 150 feet west) of the well requested in Condition 6 of the OCD final order well. Provides delineation west of TMW-19.

m. New 4 (32.477662°, -103.118673°) This is a modification (approximately 250 feet east) of the OCD final order well TMW-38. Better defines background concentrations. Provides characterization in the southeast of the site.

n. New 5 (32.475958°, -103.121591°) This is a modification (approximately 200 feet south) of the OCD final order well TMW-41. Provides downgradient characterization at the southern extent of the release area.

o. New 6 (32.475825°, -103.119373°) This is a modification (approximately 200 feet southeast) of the OCD final order well TMW-42 (condition 1l). Provides downgradient characterization at the southeastern extent of the release area.

2. Soil borings:

a. SB-1 (32.481164°, -103.118979°) This boring is proposed in a location approximately 180 feet northeast of existing monitoring well TMW-13. The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

b. SB-2 (32.477502°, -103.120147°) This boring is proposed approximately 230 feet southeast of existing TMW-18. The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

3. Sampling and monitoring:

a. The windmill well must be sampled and analyzed for barium in the next round of groundwater monitoring.

b. All additional monitoring wells must be logged by a qualified person and have soil sample analyses for TPH, chloride, and BTEX by EPA Methods 8260, EPA Method 300 and EPA Method 8015. Five (5) foot interval composite samples are acceptable.

c. Drilling for all wells is required to commence within ninety (90) days from the date of approval of the Order approving the Modified Conditions of Approval.

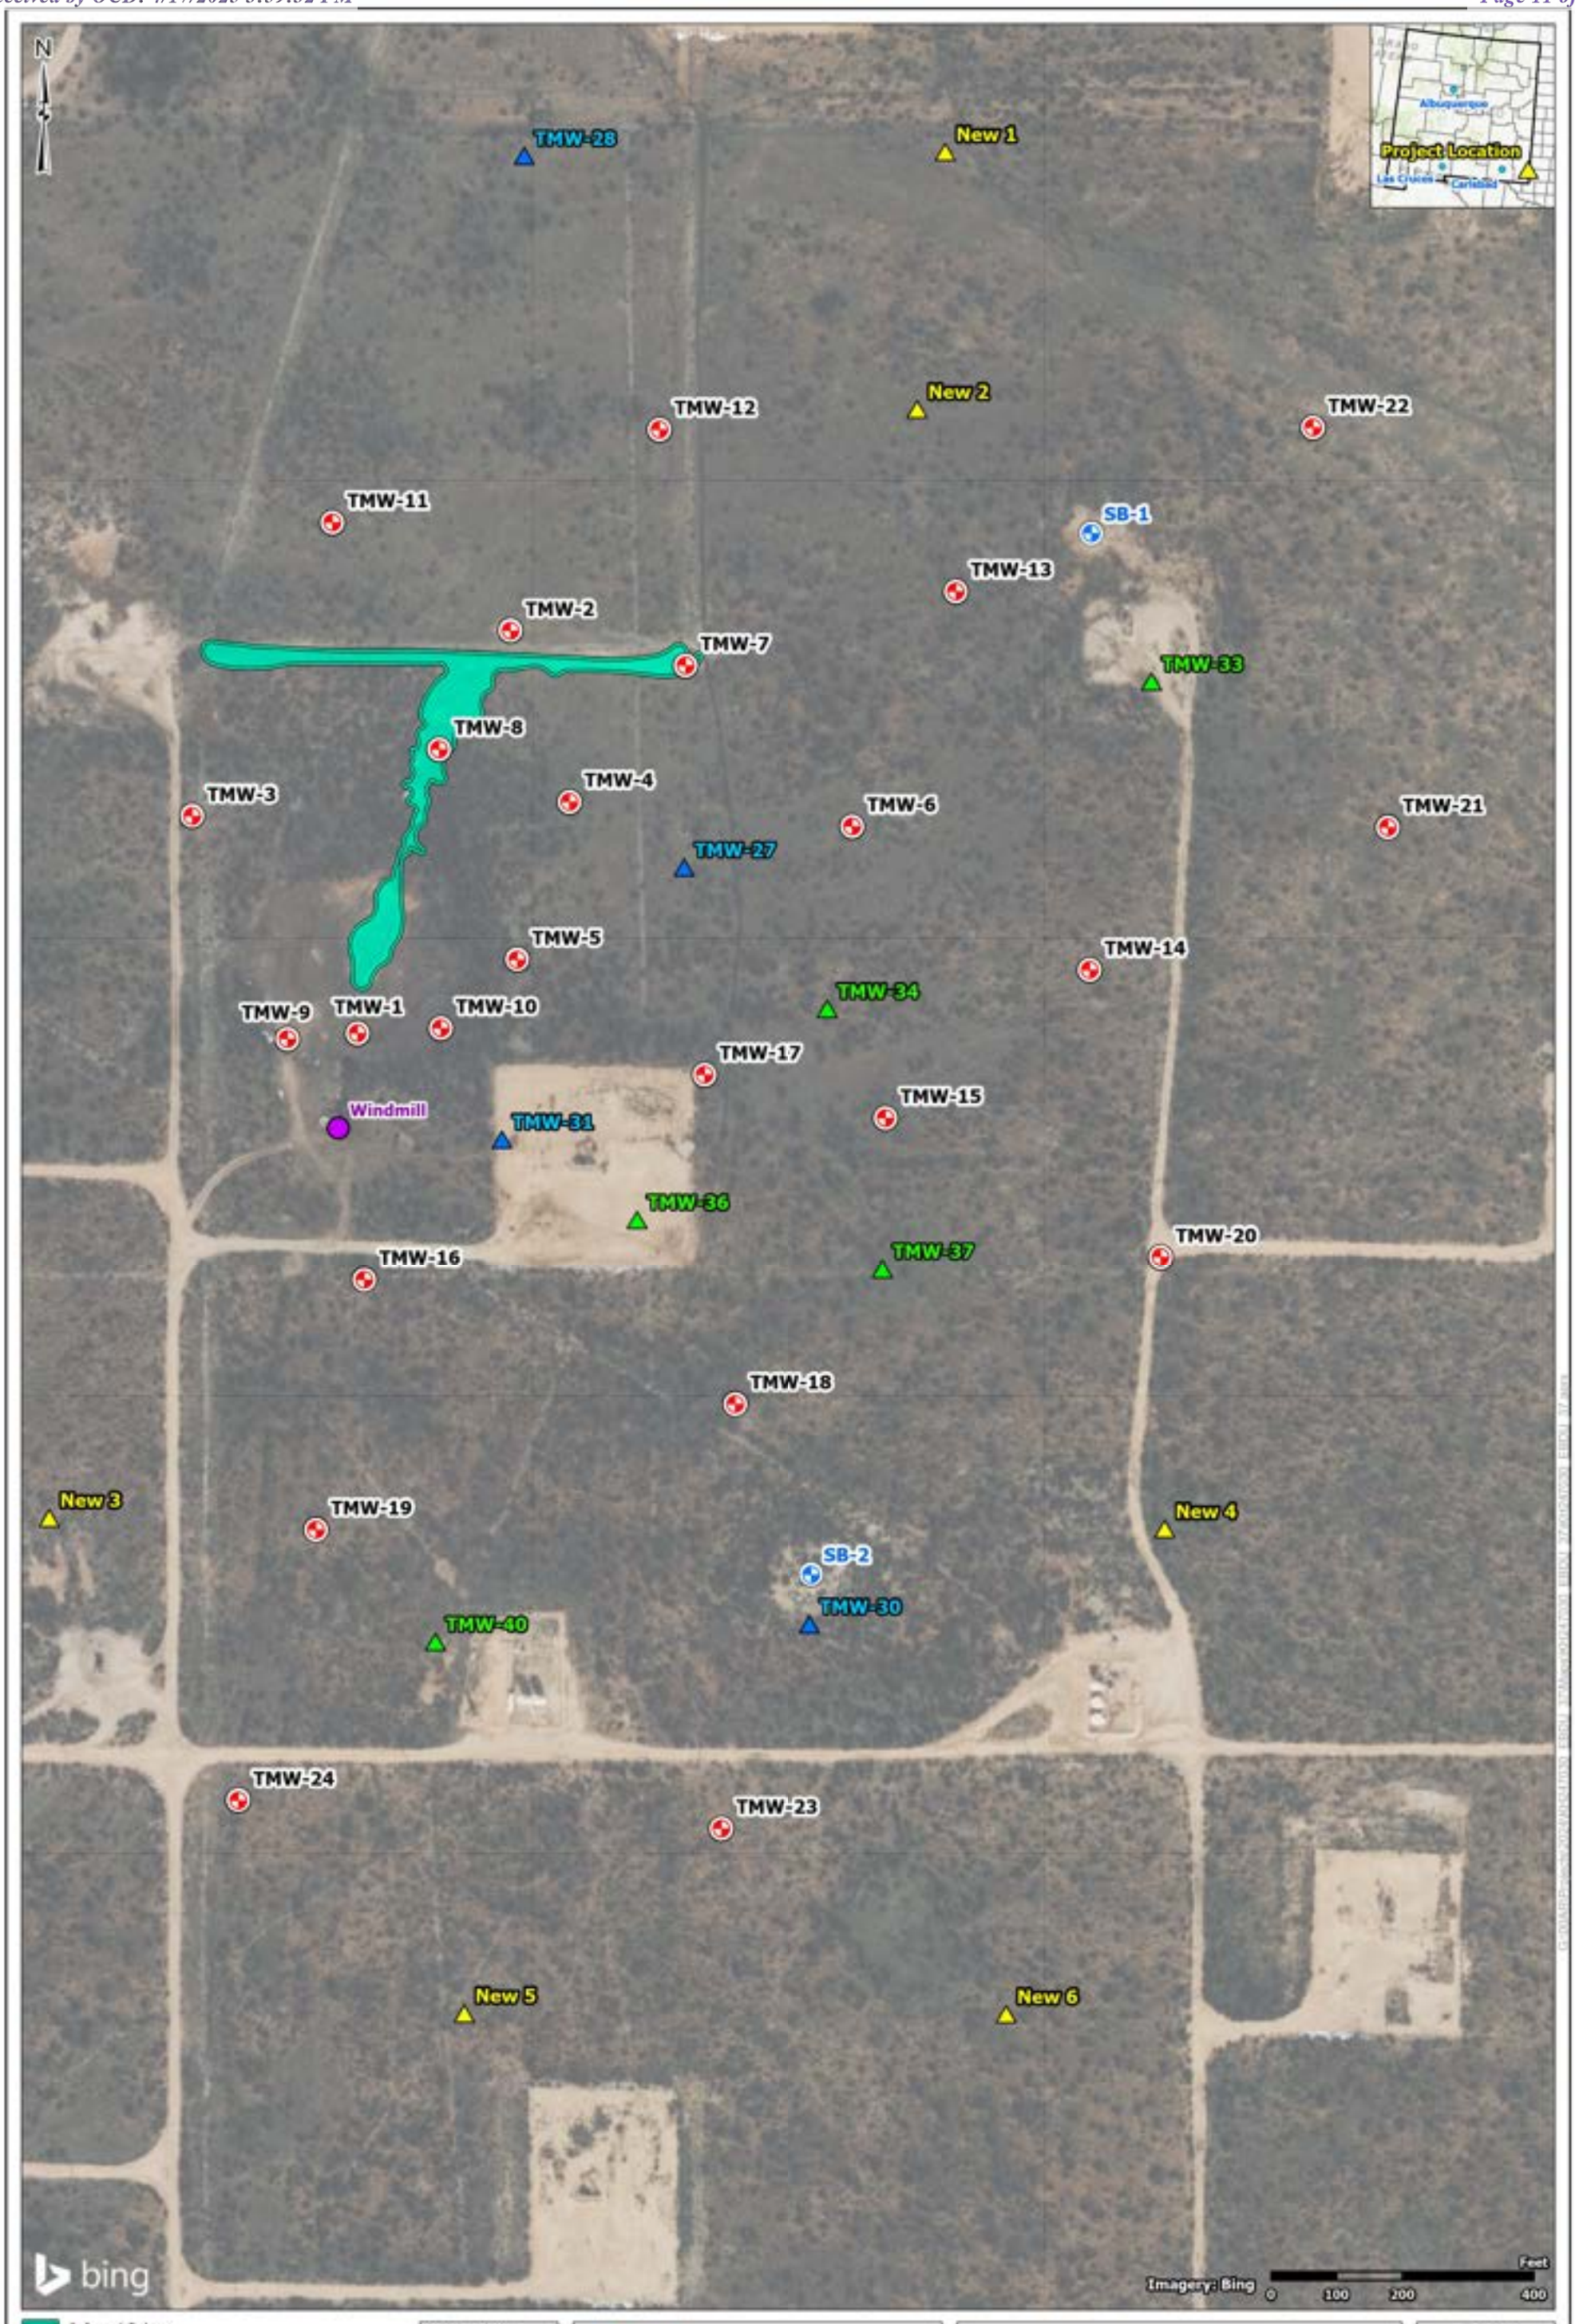
d. Include general chemistry water analysis on all samples including Cation/Anion results to understand TDS exceedances that are not chloride related.

e. In the next sampling event, sample all wells for the following 20.6.2.3103 NMAC constituents: (add all constituents with exceedances or which were not yet tested for)

i. Barium, Cyanide, Boron, due to exceedances of their regulatory limits.

ii. Pentachlorophenol, atrazine, Ethylene dibromide (EDB) also known as 1,2-Dibromoethane as these constituents were either not previously analyzed or had reporting limits and/or minimum detection limits that are above the regulatory limits.

iii. Temperature and pH must be analyzed for in the field as they were reported out of hold time.



f. Apache shall complete and sample each additional well within thirty days of completion of drilling.

g. Apache must continue taking quarterly sampling and provide the results to the Division via the online permitting system. Results received by Apache must be submitted (via email) within 30 days, even if the report is still pending or waiting on additional results.

h. Apache shall include all field notes and calibration logs for field equipment used during groundwater monitoring events in all subsequent reports submitted through the OCD permitting system.

4. The Division may administratively extend deadlines related to drilling or sampling activities specified in this Order and may approve minor adjustments to the specified well locations for good cause shown.

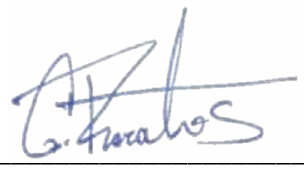
STATE OF NEW MEXICO
DEPARTMENT OF ENERGY, MINERALS AND NATURAL RESOURCES
OIL CONSERVATION COMMISSION

IN THE MATTER OF
APPLICATION OF APACHE CORPORATION
FOR AN ADJUDICATORY HEARING TO
CONTEST THE DIVISION'S CONDITIONS OF
APPROVAL ON APACHE CORPORATION'S
SCOPE OF WORK FOR ADDITIONAL
INVESTIGATION, LEA COUNTY, NEW MEXICO

OCC CASE NO. 24912
ORDER NO. R-23728-A



ORDER GRANTING APACHE CORPORATION AND THE OIL CONSERVATION DIVISION'S JOINT MOTION TO AMEND ORDER NO. R-23728

This matter is before the Commission on OCC CASE NO. 24912 on APACHE CORPORATION and the OIL CONSERVATION DIVISION'S JOINT MOTION to amend ORDER NO. R-23728. Having considered the request, and being fully appraised in the matter,
IT IS HEREBY ORDERED as follows:

1. On April 17, 2025, APACHE CORPORATION and the OIL CONSERVATION DIVISION filed a JOINT MOTION to amend ORDER NO. R-23728.
2. On April 21, 2025, APACHE CORPORATION and the OIL CONSERVATION DIVISION appeared at the OCC meeting and provided an oral explanation for the Motion.
3. The OCC voted unanimously to grant the Motion.
4. Therefore, good cause does exist to grant the Motion and the Motion therefore is GRANTED.

IT IS SO ORDERED.

DATED: 06/05/2025

Gerasimos Razatos, Acting Chairman
New Mexico Oil Conservation Commission

EXHIBIT A

Exhibit A: Modified Final Conditions of Approval

1. As part of Permit API 30-025-06556, Apache Corporation must commence the following within ninety (90) days of the date of the Oil Conservation Commission's Order granting the Joint Motion to Amend Order No R-23728. The coordinates for each monitoring well are included below. Groundwater Monitoring Wells:

    a. TMW-27 (32.479989°, -103.120675°) will serve to confirm the chloride plume is continuous between the source (near TMW-7) and TMW-17, which has shown elevated chlorides in recent sampling.

    b. TMW-28 (32.482492°, -103.121341°) will provide upgradient delineation. This well will be located approximately 750 feet upgradient of the source.

    c. TMW-30 (32.477327°, -103.120154°) will be located approximately 200 feet southeast of TMW-18 to provide information on stratigraphy and groundwater chemistry in the space between current TMW-18, TMW-23, and proposed New 4. This is the location identified as TMW-39 from the original OCD Conditions of Approval.

    d. TMW-31 (32.479032°, -103.121434°) will be installed approximately 200 feet east of the Windmill. This well is also requested in condition 5 of the OCD final order.

    e. TMW-33 (32.480650, - 103.118951) will be installed approximately 415 feet southwest of TMW-22. Reduces the distance between TMW-21 and TMW-13 for more precise characterization.

    f. TMW-34 (32.479492, - 103.120080) will be installed approximately 350 feet west of TMW-14. Achieves more characterization near TMW-17.

    g. TMW-36 (32.478749, -103.120871) will be installed approximately 175 feet southwest of TMW-17. Addresses need for more characterization near TMW-17

    h. TMW-37 (32.478577, -103.119850) will be installed approximately 275 feet southeast of TMW-17. Provides additional characterization near TMW-17.

    i. TMW-40 (32.477265°, -103.121711°) will be installed approximately 200 feet southeast of TMW-19. Addresses lack of characterization and assessment between TMW-19 and TMW-18

    j. New 1 (32.482505°, -103.119588°) This is a modification (approximately 100 feet east) of the OCD final order well TMW-30. Better defines background concentrations.

    k. New 2 (32.481600°, -103.119705°) This is a modification (approximately 100 feet northeast) of the OCD final order well TMW-32. Reduces distance between adjacent wells for more precise characterization.

    l. New 3 (32.477701°, -103.123321°) This is a modification (approximately 150 feet west) of the well requested in Condition 6 of the OCD final order well. Provides delineation west of TMW-19.

m. New 4 (32.477662°, -103.118673°) This is a modification (approximately 250 feet east) of the OCD final order well TMW-38. Better defines background concentrations. Provides characterization in the southeast of the site.

n. New 5 (32.475958°, -103.121591°) This is a modification (approximately 200 feet south) of the OCD final order well TMW-41. Provides downgradient characterization at the southern extent of the release area.

o. New 6 (32.475825°, -103.119373°) This is a modification (approximately 200 feet southeast) of the OCD final order well TMW-42 (condition 1l). Provides downgradient characterization at the southeastern extent of the release area.

2. Soil borings:

   a. SB-1 (32.481164°, -103.118979°) This boring is proposed in a location approximately 180 feet northeast of existing monitoring well TMW-13. The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

   b. SB-2 (32.477502°, -103.120147°) This boring is proposed approximately 230 feet southeast of existing TMW-18. The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

3. Sampling and monitoring:

   a. The windmill well must be sampled and analyzed for barium in the next round of groundwater monitoring.

   b. All additional monitoring wells must be logged by a qualified person and have soil sample analyses for TPH, chloride, and BTEX by EPA Methods 8260, EPA Method 300 and EPA Method 8015. Five (5) foot interval composite samples are acceptable.

   c. Drilling for all wells is required to commence within ninety (90) days from the date of approval of the Order approving the Modified Conditions of Approval.

   d. Include general chemistry water analysis on all samples including Cation/Anion results to understand TDS exceedances that are not chloride related.

   e. In the next sampling event, sample all wells for the following 20.6.2.3103 NMAC constituents: (add all constituents with exceedances or which were not yet tested for)

      i. Barium, Cyanide, Boron, due to exceedances of their regulatory limits.

      ii. Pentachlorophenol, atrazine, Ethylene dibromide (EDB) also known as 1,2-Dibromoethane as these constituents were either not previously analyzed or had reporting limits and/or minimum detection limits that are above the regulatory limits.

      iii. Temperature and pH must be analyzed for in the field as they were reported out of hold time.

f. Apache shall complete and sample each additional well within thirty days of completion of drilling.

g. Apache must continue taking quarterly sampling and provide the results to the Division via the online permitting system. Results received by Apache must be submitted (via email) within 30 days, even if the report is still pending or waiting on additional results.

h. Apache shall include all field notes and calibration logs for field equipment used during groundwater monitoring events in all subsequent reports submitted through the OCD permitting system.

4. The Division may administratively extend deadlines related to drilling or sampling activities specified in this Order and may approve minor adjustments to the specified well locations for good cause shown.

Notes:

Blue denotes concentrations exceeding water quality standards as described in 20.6.2.3103 NMAC

a. The original TDS value reported for this sample was 17,900. Please refer to lab report J109606-1 for lab commentary on this result.

Rows highlighted yellow are data OCD added to table as Apache only provided the lab reports. Red font denotes results above regulatory standards.

Samples with sample IDs that included "Dup" were not included in OCDs update to the table as OCD could not discernt what wells the duplicates were collected from.

RE: Field Activity Report
East Blinebry Drinkard Unit (EBDU) #37
Lea County, New Mexico

Terracon Project No. AR25P108

Dear Mr. Bole:

Terracon Consultants, Inc. (Terracon) is pleased to submit to Apache Corporation (Apache) the enclosed Field Activity Report (FAR) completed for the East Blinebry Drinkard Unit (EBDU) #37 project Site in Lea County, New Mexico. The work reported includes the installation of 15 monitoring wells and two soil borings between August 5 and August 11, 2025 and conducting one groundwater monitoring event between August 11 and August 28, 2025.

This FAR includes the descriptions of the field activities, boring logs, tables presenting depth to water measurements, field parameter measurements, groundwater analytical results, figures illustrating the Site location, well locations, the groundwater gradient and chemical detections in each sampling location, and conclusions and recommendations from the site activities.

Terracon appreciates this opportunity to provide environmental consulting services to Apache. Should you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
Terracon

1.0 Executive Summary

Terracon Consultants, Inc. (Terracon) has prepared this Field Activity Report (FAR) on behalf of Apache Corporation (Apache) for submittal to the New Mexico Oil Conservation Division (NMOCD). The project location is the East Blinebry Drinkard Unit (EBDU) #37 (Site) located in Lea County, New Mexico, geodetic position North 32.4807053, West -103.123085. The scope of work discussed in this report implements the agreed upon actions as described in Order No. R-23728-A issued by the New Mexico Oil Conservation Commission (OCC) in Case No. 24912. Following is a summary of the work completed:

- Installed 15 groundwater monitoring wells: TMW-27; TMW-28; TMW-30; TMW-31; TMW-33; TMW-34; TMW-36; TMW-37; TMW-40; TMW-41 (New 1); TMW-42 (New 2); TMW-43 (New 3); TMW-44 (New 4); TMW-45 (New 5) and TMW-46 (New 6). Note that the reference to "New #" refers to a well designation from Order No. R-23728-A.
    - Soil samples were collected at 5-foot intervals in each boring advanced for the monitoring well installations and were analyzed for total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), and for chloride.
- Completed two soil borings in areas suspected of being a former drilling pit (SB-1) and a former disposal pit (SB-2).
    - Soil samples were collected at 2-foot intervals from each of the two borings and were analyzed for TPH, BTEX, and chloride
- Completed a survey of ground elevation, top of casing elevation, and location for all monitoring wells
- Gauged water levels in all existing and new monitoring wells (39 monitoring wells)
- Collected groundwater samples from the existing and new monitoring wells (39 monitoring wells) and the Windmill Well. Each groundwater sample was analyzed for the constituents in the New Mexico Water Quality Control Commission (WQCC) list in subsections A, B and C of 20.6.2.3103 New Mexico Administrative Code (NMAC), hereinafter referred to as the 3103 standards.

Summary of Results

Two soil borings, SB-1 and SB-2, were advanced with the objective of identifying potential sources of chloride impacts to groundwater. Soil samples from SB-1 exhibited chloride concentrations above the NMOCD closure criterion of 600 milligrams per kilogram (mg/kg) in samples from the ground surface to 15 feet below ground surface (bgs) (as described in Table 1, 19.15.29 NMAC (Table 1 standards)). However, the elevated chlorides did not extend to the water table, evidencing that this area is not a likely source of chloride impacts to groundwater. Soil samples from SB-2 exhibited chloride concentrations above 600 mg/kg in samples from the ground surface to the 50-foot bgs termination depth of the boring, providing evidence that this area may be a potential source of chloride impacts to groundwater. Chloride concentrations were also above Table 1 standards at two select depth intervals [10 to 15 ft bgs and 30 to 35 ft bgs] in TMW-30, located approximately 60 feet south of SB-2. Soil samples from TMW-40 exceeded 600 mg/kg from the ground surface to 20 feet bgs, but did not extend to the water table. The only TPH detections in soil above Table 1 standards were in samples collected from the ground surface to eight (8) feet bgs at boring SB-2.

The general direction of groundwater flow is to the south-southwest, consistent with past observations. A groundwater high is noted in the area of TMW-1, which is also consistent with past observations.

Contaminants of concern in groundwater are chloride and total dissolved solids (TDS). BTEX and Polycyclic Aromatic Hydrocarbons (PAHs) were not reported to be present in any of the groundwater samples. Several metals (notably Iron, Aluminum and Boron) and radiological parameters were detected in several wells above the 3103 standards, without discernable pattern.

TDS concentrations in groundwater were found to be highest in the center of the project area near wells TMW-17, TMW-34, and TMW-36 – an area several hundred feet south and east of the 2019 release location in the vicinity of TMW-7. The concentration of chloride in groundwater correlates strongly with TDS, and was also found to be highest in the center of the project area. Wells at the furthest upgradient and downgradient locations were reported with chloride and TDS concentrations over the 3103 standards. The precise source or sources of chloride/TDS at the Site, which has been host to oil and gas activity for over 80 years, is unclear, but it appears unlikely that the 2019 release is a significant source of the observed groundwater impacts. Rather, it is more likely that the groundwater impacts are a result of produced water disposal into disposal pits utilized by previous oil and gas operators on the property.

2.0 Introduction

This report presents project data from 2019 to present with a focus on the results of field work, which took place from August 5 through August 28, 2025. This work included installation of 15 groundwater monitoring wells, two soil borings, soil sampling from the wells and borings, and groundwater gauging and sampling. **Figure 1** presents a Site location map. **Figure 2** presents a Site map with well locations and buried and overhead utilities.

Project History

On July 14, 2019, a spill originated from a flowline carrying produced water near a pipeline junction located about 720 feet east from EBDU Well #37 **(Figure 2)**. Produced water flowed west approximately 675 feet from the release point. Approximately 350 feet west from the release the water flowed south approximately 450 feet before terminating in a low-lying area. The volume of the release and recovered fluid volume are unknown. The spill covered an area measuring approximately 31,320 square feet (0.72 acres). The initial C-141 notification was submitted to OCD on July 26, 2019, and was assigned remediation permit number 1RP-5636.

Apache quickly responded to the release by sampling and then excavating impacted soil at the release Site and conducting a soil and groundwater investigation. A general timeline of the work completed to date is presented below:

- July 14, 2019 – release discovered
- July 17 to 25, 2019 – release delineation and soil sampling

- July 25 to August 8, 2019 – excavated to 12 feet over an area of 4,431 ft^{2}in the low-lying area.
- August 14-15, 2019 – advanced 4 direct push borings to 28-40 feet bgs
- August 27-28, 2019 – advanced three borings with air rotary rig to 40-50 feet bgs.
- September 19, 2019 – installed two monitoring wells (TMW-1 and TMW-2).
- June 9 through July, 2020 – completed additional soil excavation along the spill path and low-lying area.
- September 19, 2020 – installed TMW-3 and TWM-4
- November 28-30, 2022 - installed TMW-5 and TMW-6
- June 12-13, 2023 – installed TMW-7 through TMW-10
- November 28 to December 12, 2023 – installed TMW-11 through TMW-24
- August, 2025 – installed soil borings SB-1, SB-2 and monitoring wells TMW-27, 28, 30, 31, 33, 34, 36, 37, 40, 41, 42, 43, 44, 45, 46.
- Groundwater monitoring events have occurred on or around the following dates: 09/23/2019, 12/26/2019, 09/30/2020, 12/07/2020, 03/11/2021, 06/10/2021, 10/11/2021, 12/22/2021, 03/01/2022, 05/23/2022, 08/16/2022, 12/15/2022, 03/14/2023, 06/22/2023, 09/06/2023, 12/21/2023, 03/14/2024, 10/23/2024, 11/06/2024, 02/03/2025, and 08/28/2025.

Hydrogeologic Setting

The groundwater bearing unit beneath the Site is referred to as the Piedmont Alluvial Aquifer in the 2016 Lea County Regional Water Plan[1] (**Figure 3**). This unit is a discontinuous and unconfined aquifer in mostly fine grained alluvial and eolian sand and silt which were deposited in topographically low areas where the Ogallala formation had been eroded away[2]. The unconsolidated sediments of the alluvial aquifer unconformably overlie the silty clays of the Triassic aged Chinle Formation, which are commonly referred to as the red beds.

Each of the 15 additional wells was drilled through the alluvium to the top of the Triassic red beds. The boring data show that the alluvium is typically 60 ft – 70 ft thick in the area of the Site, thickening to the south following the southward dip in the surface of the red beds. The saturated thickness as recorded in August 2025 is approximately 20 ft to 30 ft. Cross sections showing the observed lithology are presented as **Figures 4 and 4A-4D**. Boring logs are presented in **Appendix A.**

The region where the Site is located has been extensively developed for oil & gas production from the Central Basin Platform of the Permian Basin, with many of the wells in the area producing from the Drinkard, Tubb, Blinebry, and Paddock members of the Yeso Formation. A review of historical aerial imagery shows some of this past production infrastructure, showing a disposal pit located where SB-2 was advanced. The pit is clearly visible in the 1955 image, and is also present in the 1968 image (**Figure 12**).

Oil production in Lea County began in the late 1920's. Historically, and prior to adoption of the "pit rule," brine was discarded in evaporation pits near the oil wells. Pits were unlined and not large enough for evaporation to take place at an effective rate. The vast majority of the brine did not

[1] *Lea County Regional Water Plan, State of New Mexico Interstate Stream Commission, Office of the State Engineer, December 2016*

[2] *Nicholson, A., and Clebsch, A., Geology and Ground-Water Conditions in Southern Lea County, New Mexico, Ground-Water Report 6, State Bureau of Mines and Mineral Resources, New Mexico Institute of Mining and Technology, 1961*

evaporate, and the brine itself was not able to evaporate easily due to thin layers of oil on the surface preventing evaporation. The majority of the brine percolated into the sand, and in some cases the caliche at the surface was broken up in order for the water to more easily pass down[3].

Brine from disposal pits moves downward due to gravity until it encounters a less permeable layer, such as clay beds within unconsolidated sediments or the red-beds at the base of the aquifer. Upon reaching the water table limited mixing occurs, but the denser brine tends to settle in the aquifer's lowest areas. The shape of the aquifer base influences brine distribution—brine release above a channel may follow a narrow path, while brine release above a ridge may disperse into multiple channels. Although density differences limit mixing, variations in permeability within the aquifer promote it (Broadhead et al, 2004[3]).

This well documented history of produced water management illustrates the complexity of addressing brine impacts to freshwater aquifers in the oil field. Given the long history of multiple sources of produced water across the area, identifying one source from another is exceptionally difficult.

3.0 Field Activities

Safety and Subsurface Utilities

Terracon is committed to the safety of all its employees. As such, and in accordance with our Incident and Injury Free® safety goals, Terracon conducted the fieldwork under a Site-specific health and safety plan. The plan identified Site-specific job hazards and proper pre-task planning procedures. Work was performed using U.S. EPA Level D work attire consisting of hard hats, high-visibility attire, safety glasses, protective gloves, and protective boots. Terracon requested location and markings for subsurface utilities before commencing intrusive activities at the Site. Daily tailgate safety meetings were conducted and documented (**Appendix C**).

Field Procedures

Boring/Well Advancement and Field Screening

Drilling services were performed by a State of New Mexico licensed driller using an air rotary drilling rig. Terracon provided two field geologists on-site at all times to oversee the drilling and sampling activities. Soil cuttings were observed continuously to document soil lithology, color, moisture content and sensory evidence of impact. Soil samples collected from the monitoring well and soil boring locations were field-screened using a MiniRae photoionization detector (PID) to indicate the presence of volatile organic compounds (VOCs). The PID was calibrated in accordance with the manufacturer's recommendations before the field activities. **Appendix C** provides field calibration documentation. The boring logs in **Appendix A** include the lithology and field screening results for each soil boring. Photographs from the field activities are presented in **Appendix D**.

[3] *Broadhead, R.F., Zhou, J., and Raatz, W.D., Play analysis of Major Oil Reservoirs in the New Mexico Part of the Permian Basin: Enhanced Production through Advanced Technologies, New Mexico Bureau of Geology and Mineral Resources, Open File Report 479, 2004.*

At each monitoring well location, the boring was advanced to a depth where samples indicated the borehole had reached the Triassic Red Beds which underlie the unconsolidated Cenozoic alluvial and fluvial deposits. The two soil borings were terminated at 50 feet depth bgs as described in OCC Order R-23728-A.

Drilling equipment was cleaned using a high-pressure washer prior to beginning the project and before beginning each soil boring. Non-dedicated sampling equipment was cleaned using an Alconox® wash and potable water rinse prior to the beginning of the project and before collecting each soil sample.

Monitoring Well Construction and Development

The monitoring wells were constructed using the following methodology:

- Well screens were installed with the intention of screening the entire thickness of the unconsolidated Cenozoic groundwater bearing unit;
- Installation of 40 to 50 feet of 2-inch diameter, 0.010-inch machine-slotted polyvinyl chloride (PVC) well screen with a threaded bottom cap;
- Installation of 2-inch diameter, threaded, PVC riser pipe to approximately 3 feet above the ground surface;
- Addition of a pre-sieved 20/40-grade annular silica sand pack from the bottom of the boring to approximately 2 feet above the top of the well screen;
- Addition of hydrated bentonite seal from above the sand pack filter zone to approximately 20 feet below the surface; and,
- Installation of a 3 foot stickup monitoring well cover with a concrete well pad.

A table presenting monitoring well completion information is included as **Table 1**. Additional well construction details are presented on the soil boring logs in **Appendix A** and the state well records in **Appendix B**. **Appendix C** provides the field notes collected during boring drilling and well installation activities.

The monitoring wells were developed by surging and removing groundwater with a submersible pump that was cleaned with an Alconox® wash and potable water rinse between sample locations until the groundwater was relatively free of fine-grained sediment based on visual observation of the purge water. Approximately 20 gallons of groundwater were removed from each monitoring well during development. Water generated during development of the wells was collected in totes and disposed of off-Site.

Water Level Measurements

Depth to water in the monitoring wells was measured on August 28, 2025, utilizing an electronic water level meter, with measurements ranging from 49.81 feet below top of casing (TOC) (TMW-1) to 69.31 feet below TOC (TMW-22). A summary of the groundwater gauging data is presented in **Table 2** and the water level measurement notes are presented in **Appendix C.** Hydrographs graphically presenting water levels over time are presented as **Figures 5 and 5A to 5D**, and show that the groundwater elevation has dropped in all but two wells (TMW-1 and TMW-14) since the February gauging event. At the wells that have been in place since 2020, the water table has declined by approximately 1.5 feet over the past five years.

The groundwater potentiometric surface as measured on August 28, 2025, is depicted in **Figure 6**. For comparison purposes **Figure 6A** presents groundwater gradient maps from December 21, 2023, March 14, 2024, October 23, 2024, and February 5, 2025. As depicted in **Figure 3**, groundwater flow is generally to the south-southwest with a gradient of approximately 0.0018 ft/ft, which is generally consistent with past monitoring data. The groundwater anomalies at TMW-19 and TMW-4 that were reported during gauging events in May 2024 and October 2024 (Larson, May 8, 2024; and Terracon January 23, 2025) are absent or far less pronounced. The area of elevated groundwater levels observed in the past at TMW-1 has remained and is also observed in the August 2025 data. This "mounding" is thought to be the result of infiltration of precipitation which may flow to this area, and water from the windmill which runs nearly continuously and flows into the low-lying area where TMW-1 is located. Note that the groundwater potentiometric surface map presented as Figure 3 was drawn without the data recorded at TMW-14. The water level recorded during the August 28 gauging event was exactly 1.00 feet higher than the number recorded while sampling the well two days prior on August 26, and is believed to be a field transcription error. Inclusion of the gauging reading from TMW-14 on August 28 would result in a pronounced mound centered on TMW-14, which has not been observed in the past and not believed to be representative of site conditions.

Soil and Groundwater Sample Collection and Handling

At the monitoring well locations, soil samples for laboratory analysis were collected from the drill cuttings at 5-foot intervals from the ground surface until moisture was encountered. At the two soil boring locations a split spoon sampler was used to collect undisturbed samples from beneath the level of the rotary bit. Split spoon samples were collected at 2-foot intervals from the ground surface to 20 feet bgs then every five feet to the 50 foot termination depth of the borings.

Soil samples were collected into laboratory-prepared containers containing the appropriate preservative, labeled, and placed on ice in sample coolers. The samples were secured with a custody seal and delivered to the selected analytical laboratory. Soil sample intervals for each boring are presented on the laboratory chains of custody included in **Appendix E**.

Groundwater samples were collected using low-flow sampling techniques with the intake set at the mid-point of the water column. The monitoring wells were purged prior to sampling until consistent values were obtained for select geochemical parameters (temperature, pH, conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP)). Once these parameters stabilized, the groundwater samples were collected. The final groundwater parameters measured during sampling are presented in **Table 6**. The field parameters collected during well purging is documented in the field notes presented in **Appendix C**.

Groundwater samples for laboratory analysis were collected into laboratory-prepared containers containing the appropriate preservative, labeled, and placed on ice in sample coolers. The samples were secured with a custody seal and delivered to the selected analytical laboratory. The sample coolers and completed chain-of-custody forms (**Appendix F**) were relinquished to Eurofins Environment Testing (Eurofins) in Houston, Texas for analysis on standard turnaround times.

One groundwater sample was collected from the Windmill Well. At the time of sampling, the Windmill Well was actively pumping groundwater into a series of open tanks, which then discharges to ground and flows into the low-lying area towards TMW-1. The sample was collected directly from the Windmill

Well outlet before the first tank. Photographs on Page 3 of the photolog in **Appendix D** show the windmill and associated water tanks. Completion details such as well depth and screened interval are not known for the Windmill Well.

Laboratory Analytical Methods

The groundwater samples from all of the monitoring wells and the Windmill Well were analyzed for the suite of parameters described in 20.6.2.3103 NMAC as follows:

- Volatile organic compounds (VOCs) using Method SW846 8260D
- Semi volatile organic compounds (SVOCs) using Method SW846 8270E
- Polychlorinated biphenyls (PCBs) by method SW846 8082A
- Anions (nitrate, nitrite, fluoride, sulfate, and chloride) using EPA Method 300.0
- Metals using Method SW846 6020B and 6010D
- Mercury using Method SW846 7470A
- Total phenols using EPA Method 420.4
- Total cyanide using EPA Method Kelada 01
- TDS using Method SM 2540C
- Radium-226 using EPA Method 903.0
- Radium-228 using EPA Method 904.0
- General chemistry (pH and temperature) using Method 9040CSM 4500 H+ B. pH and Temperature were also measured in the field during sample collection.

The soil samples collected from the monitoring well and soil boring locations were analyzed for the following parameters:

- chloride using EPA Method E300.0
- Total Petroleum Hydrocarbons using EPA Method 8015 NM
- TPH-GRO, TPH-DRO, and TPH-DRO using EPA Method 8015B NM
- Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) using EPA Method 8260D
- Calculated result for total BTEX

Investigation-Derived Waste (IDW)

Groundwater and equipment cleaning water generated during the field activities were placed in totes, which were closed and appropriately labeled with project-specific information and initial accumulation date. Soil cuttings generated during the drilling were placed in roll-off boxes. A total of three 20 cubic yard roll off boxes containing soil cuttings, five 250-gallon totes containing groundwater and equipment cleaning water were generated during these field services and were characterized as non-hazardous waste and subsequently transported to Northen Delaware Basin Landfill 2029 West NM Highway 128, Jal, New Mexico for disposal in accordance with applicable regulations. The associated waste manifests are included in **Appendix F**.

Excess purge water generated during groundwater sampling was containerized in 55-gallon drums located at each well and left on-site to be used to collect water from future monitoring events.

4.0 Analytical Results

Soil Analytical Results

Soil analytical results are presented in **Table 3**, and chloride results are depicted graphically on a map in **Figure 7**. The laboratory reports and chains of custody are presented in **Appendix E**. Laboratory analytical results from the soil samples collected at monitoring well and soil boring locations are compared to the Closure Criteria listed in Table 1, 19.15.29 NMAC as follows:

Parameters	Closure Criteria	Analytical Method
Chloride	600 mg/kg	EPA Method 300
Total Petroleum Hydrocarbons, TPH-GRO, TPH-DRO and TPH-MRO	100 mg/kg each parameter	EPA Method 8015B NM
Total Benzene, Toluene, Ethylbenzene and Xylenes (Total BTEX)	50 mg/kg	EPA Method 8260B
Benzene	10 mg/kg	EPA Method 8260B

Benzene was not reported above the OCD Table 1 criteria in any of the soil samples collected during this investigation. Similarly, Total BTEX was not reported above the Table 1 closure criteria in any of the samples collected during this investigation. Several samples collected between 2.5 feet and 8 feet bgs at SB-02 reported detections of Total BTEX, with the highest concentration of 8.75 mg/kg in the sample collected from 2.5-3.0 feet bgs. None of the detected BTEX constituents were reported at values exceeding the Table 1 criteria of 10 mg/kg Benzene or 50 mg/kg Total BTEX.

TPH was detected at concentrations above the Table 1 criteria of 100 mg/kg in samples collected from SB-2 between the ground surface and 8 feet bgs as follows: 0-2.5 ft=5,250 mg/kg; 2.5-3 ft=2,150 mg/kg; 4-4.5 ft=1,720 mg/kg, 6 ft=318 mg/kg, and 8 ft=434 mg/kg. TPH did not exceed the Table 1 criteria in any of the other samples.

Chloride concentrations exceeded the OCD Table 1 criteria of 600 mg/kg in the following samples:

- **SB-1:** 0 - 1 ft; 5 ft; 10 ft; 15 ft
- **SB-2:** 0 - 2.5 ft; 2.5 - 3 ft; 4 - 4.5 ft; 6 ft; 8 ft; 12 ft; 18 ft; 20 ft (sample and duplicate); 25 ft; 30 ft; 35 ft; 45 ft; 50 ft
- **TMW-30:** 10 - 15 ft; 30 - 35 ft
- **TMW-40:** 0 - 5 ft; 5 - 10 ft; 10 - 15 ft; 15 - 20 ft

There were several locations where chloride was reported at concentrations above what would reasonably be considered background, but below the 600 mg/kg action level. For the purposes of discussion, we are using a value of 100 mg/kg as a value above which there is likely an anthropogenic source of chloride[4]. Also note that the depth to groundwater recorded in the completed wells indicates

[4] *100 mg/kg was selected in recognition of the uncertainty introduced by the sample collection method at monitoring well locations from air rotary drill cuttings, which may contain soil from shallower depth intervals.*

the water table occurs at depths of 55 feet to 65 feet bgs, such that samples below these depths reflect conditions in the saturated zone. On this basis, the following soil locations at depth intervals above the saturated zone exhibited chloride above background but below Table 1 criteria:

- SB-1 0 to 35 feet bgs
- SB-2 0 to 50 feet bgs (termination depth of the boring)
- TMW-30 5 to 60 feet bgs
- TMW-31 0 to 15 feet bgs
- TMW-34 5 to 15 and 30 to 40 feet bgs
- TMW-36 0 to 20 and 30-40 feet bgs
- TMW-40 0 to 30 feet bgs
- TMW-43 0 to 20 feet bgs
- TMW-44 0 to 50 feet bgs
- TMW-45 5 to 20 feet bgs
- TMW-46 5 to 15 feet bgs

Thus, the only area identified where chloride is possibly sourced from the soil to groundwater is in the vicinity of the former disposal pit at SB-2 and TMW-30. There were also several locations where soil samples collected from depths of 60 feet or deeper reported chloride over 100 mg/kg, but with shallower soil samples from the same locations exhibiting chloride concentrations below 100 mg/kg. In these locations (TMW-31, TMW34, and TMW-36), the elevated chloride was reported in saturated soil samples below the water table. The elevated chloride reported in soil at these locations reflects the presence of chloride in groundwater, and do not represent a source of chloride in the soil at these locations.

The two soil borings were advanced with the specific objective of identifying potential sources of contamination from the ground surface to the aquifer. The rationale for these two borings from OCC Order R-23728-A and a summary of the investigation results are presented below:

SB-1: The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

> **Findings:** Chloride was present above the Table a criteria of 600 mg/kg in samples from the ground surface to 15 feet bgs. The elevated chloride did not extend to the water table. The elevated chloride in shallow soil likely accounts for the lack of vegetation in this area, but it does not appear to be a likely source of impacts to groundwater. Based on the location of this area and a review of historical aerial imagery, this location is suspected to have been a former drilling pit.

SB-2: The boring is located centered on an area with restricted vegetation growth suspected of being a potential source of contaminants leaching to groundwater.

Findings: TPH was present above Table 1 criteria of 100 mg/kg from the ground surface to 8 feet bgs. Chloride was present above the Table 1 criteria of 600 mg/kg in samples from the ground surface to 50 feet bgs. The results indicate this area is a likely source of impacts to groundwater.

A review of historical aerial imagery clearly identifies the area of SB-2 as being a former disposal pit. The pit is clearly visible in the 1955 image, and is also present in the 1968 image presented (**Figure 12**).

Soil samples from TMW-30, located approximately 60 feet South of SB-2, reported chloride concentrations above background (assumed to be 100 mg/kg for chloride) from the ground surface to 60 feet bgs (i.e., to groundwater). Samples from 10-15 foot depth interval and 30-35 foot depth interval reported chloride over the Table 1 criteria of 600 mg/kg.

Groundwater Analytical Results – Section 3103 Parameters Excluding TDS and Chloride

Groundwater samples collected in August 2025 from each of the 39 monitoring wells and the Windmill Well were analyzed for the suite of parameters listed in 20.6.2.3103 NMAC (Section 3103). Terracon worked with Eurofins Laboratory in an attempt to ensure the laboratory detection limits were equal to or less than the groundwater standards listed in section 3103. The laboratory was able to meet these detection limits with the exception of Benzo(a)pyrene (discussed below) and several parameters (fluoride, antimony, arsenic, beryllium, and cadmium) at TMW-17, TMW-34, and TMW-36 where TDS concentrations were greater than 10,000 mg/L, necessitating dilution of the samples to run the analyses. For the purposes of evaluating non-detection results against the 3103 standards, a value of ½ the sample detection limit was used for the comparison. If ½ the detection limit exceeded the 3103 standard, then that well is reported to have a value over the 3103 standard.

The Polynuclear Aromatic Hydrocarbon (PAH) Benzo(a)pyrene has been reported with a detection limit between 0.285 to 0.29 micrograms per liter (µg/L), which exceeds the 3103 standard of 0.2 µg/L. All sample results were reported below these detection limits. There were no detections of any of the other PAHs above detection limits or 3103 standards (with the exception of 1-methylnaphthalene and 2-methylnaphthalene in TMW-41 and TMW-42 at levels well below the 3103 standards). Assuming a concentration equal to ½ the detection limit would result in values of 0.143 µg/L to 0.145 µg/L, which are below the groundwater standard of 0.2 µg/L. Therefore we are not considering the non-detect results to indicate that Benzo(a)pyrene exceeds the 3103 standard.

The bulleted list below provides a summary of the locations that reported one or more parameters over the 3103 standards, with the exception of chloride and TDS which are discussed separately in the following section. These results are also presented in **Table 4**, and are depicted graphically on the map presented as **Figure 8**.

- The laboratory presented results from 109 constituents at the 39 monitoring wells and the Windmill well, resulting in approximately 4,360 analytes reported (not including duplicates). Out of these 4,360 analytes, 39 individual analytes were reported with concentrations above the 3103 human health standards. In addition, there were eight (8) instances where results were reported below the Method Detection Limit (MDL), but ½ of the MDL was greater than the 3103 standard.
- Concentration or detection limit exceedances to one or more 3103 constituents other than chloride and TDS were reported at 22 monitoring wells:
    - TMW-3; TMW-4; TMW-7; TMW-8; TMW-9; TMW-11; TMW-13; TMW-16; TMW-17; TMW-20; TMW-23; TMW-27; TMW-28; TMW-31; TMW-33; TMW-34; TMW-36; TMW-40; TMW-42; TMW-44; TMW-45; TMW-46
- Six wells reported exceedances of combined radium ($^{226}R+^{228}R$)
- Thirteen wells reported exceedances of Iron
- Five wells reported exceedances of Fluoride
- Six wells reported exceedances of Aluminum
- Six wells reported exceedances of Boron
- One well reported an exceedance of Manganese
- Select parameters were reported below the MDL, but the value of ½ the MDL exceeded the 3103 standard at the following locations:
    - TMW-9: Pentachlorophenol
    - TMW-17: Beryllium
    - TMW-27: Fluoride
    - TMW-34: Antimony, Arsenic, Beryllium, Cadmium, Lead
    - TMW-36: Beryllium

Review of the geographic distribution of exceedances to the 3103 constituents on Figure 10 does not reveal a clear pattern. Some of the wells with 3103 exceedances have high TDS, some do not. For example, several of the wells with high TDS (e.g. TMW-15, TMW-18, TMW-37) have no exceedances to the 3103 constituents, whereas several of the wells with low TDS (e.g. TMW-9, TMW-44) do have 3103 exceedances.

Groundwater Analytical Results – Chloride and TDS

Chloride concentrations from the August 2025 sampling event ranged from 110 mg/L in TMW-1 to 6,930 mg/L in TMW-34. TDS concentrations from the August sampling event ranged 593 mg/L in TMW-1 to 15,000 mg/L in TMW-36. **Table 5** presents the laboratory results from TDS and chloride groundwater samples collected from the beginning of the project to current. **Figure 9** presents a chloride isoconcentration map and **Figure 10** presents a TDS isoconcentration map for the August 2025 samples.

Background Chloride and TDS

Monitoring wells TMW-28 and TMW-41 were installed for the purpose of better defining background conditions. TMW-41 was installed further south than originally planned due to the presence of overhead utilities and buried flowlines in the targeted location, and therefore may not represent background conditions. Instead, we consider monitoring wells TMW-11, TMW-28, TMW-22, and TMW-21, located around the northern perimeter of the plume upgradient from the release location, to be representative of background conditions in the area. Chloride and TDS values for these four monitoring wells are summarized in the following table.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-11	08/12/2025	380	1550
TMW-21	08/13/2025	269	1060
TMW-22	08/20/2025	278	1090
TMW-28	08/13/2025	325	1200
	Average	**313**	**1225**

August 2025 Monitoring Wells

The additional 15 monitoring wells were installed with specific objectives for each location as stated in the June 5, 2025 OCC Order No. R-23728-A. The objectives as stated in the OCC order are presented below followed by a discussion of the investigation findings at that location.

a. TMW-27 will serve to confirm the chloride plume is continuous between the source (near TMW-7) and TMW-17, which has shown elevated chlorides in recent sampling.

Findings: Concentrations of TDS and chloride in groundwater at TMW-27 are intermediate between the low levels seen in the area of the 2019 release (TMW-7, TMW-8), and the highest values at the Site reported in wells TMW-17, TMW-34, and TMW36.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-7	8/20/25	880	2,500
TMW-8	8/20/25	442	1,390
TMW-27	**8/14/25**	**3,880**	**7,780**
TMW-17	8/27/25	5,700	11,600
TMW-34	8/26/25	6,930	14,500
TMW-36	8/27/25	6,550	15,000

The highest chloride values reported from soil samples at TMW-27 were 40 mg/kg, indicating this soil at this location is not a source of chloride in groundwater. The elevated concentration of chloride observed in groundwater imply chloride migration to this area.

b. TMW-28 will provide upgradient delineation. This well will be located approximately 750 feet upgradient of the source.

Findings: Groundwater at TMW-28 reported chloride (325 mg/L) and TDS (1,200 mg/L) over the 3103 standards but at levels thought to be representative of background conditions in this area. TMW-28 is located approximately 670' upgradient from the source of the 2019 release. Chloride concentrations in the soil samples collected from TMW-28 have very low concentrations (<26 mg/kg) reflecting background concentrations.

c. TMW-30 will be located approximately 200 feet southeast of TMW-18 to provide information on stratigraphy and groundwater chemistry in the space between current TMW-18, TMW-23, and proposed New 4 (TMW-44). This is the location identified as TMW-39 from the original OCD Conditions of Approval.

Findings: TMW-30 is located approximately 60 feet South of SB-2 at the location of the former disposal pit dating to the 1950's. Soil samples from TMW-30 reported elevated chloride concentrations from the ground surface to 60 feet bgs (**Figure 7, Table 3**). Samples from 10-15 foot depth interval and 30-35 foot depth interval reported chloride over the Table 1 criteria of 600 mg/kg. The soil sample collected from 55 ft to 60 ft depth bgs reported chloride at 344 mg/kg. Groundwater was measured at 59.29 ft bgs at TMW-30, indicating chloride in soil extends to the water table at this location but at lower levels than observed in SB-2. Groundwater concentrations of TDS and chloride are intermediate between the levels reported at TMW-18, TMW-23 and TMW-44 (New 4).

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-18	08/25/2025	1,330	3,310
TMW-23	08/20/2025	951	2,130
TMW-30	**08/25/2025**	**1,010**	**2,340**
TMW-44	08/19/2025	191	803

d. TMW-31 will be installed approximately 200 feet east of the Windmill.

Findings: The groundwater sample from TMW-31 reported concentrations of chloride (2,970 mg/L) and TDS (6,460 mg/L) exceeding the 3103 standards. The chloride concentration in the soil samples collected at TMW-31 do not implicate a local source. The elevated concentration of chloride in groundwater imply chloride migration to TMW-31.

e. TMW-33 will be installed approximately 415 feet southwest of TMW-22. Reduces the distance between TMW-21 and TMW-13 for more precise characterization.

Findings: Concentrations of TDS and chloride at TMW-33 were reported above the concentrations reported for TMW-21 and TMW-13.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-13	08/21/2025	1,620	3,480
TMW-21	08/19/2025	269	1,060
TMW-33	**08/21/2025**	**2,330**	**5,340**

The chloride concentration in the soil samples collected at TMW-33 do not implicate a local source. The elevated concentration of chloride in groundwater imply chloride migration to TMW-33.

f. TMW-34 will be installed approximately 350 feet west of TMW-14. Achieves more characterization near TMW-17.

Findings: See discussion below for TMW-36

g. TMW-36 will be installed approximately 175 feet southwest of TMW-17. Addresses need for more characterization near TMW-17

Findings: Concentrations of TDS and chloride in Groundwater at TMW-36 and TMW-34 were reported above the concentrations reported for TMW-17. Collectively, these three wells define the area of highest chloride and TDS concentrations at the Site.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-17	08/27/2025	5,700	11,600
TMW-34	08/26/2025	6,930	14,500
TMW-36	**08/27/2025**	**6,550**	**15,000**
TMW-37	08/25/2025	1,370	3,440

Similar to the above findings, the chloride concentrations from soil samples at TMW-34 and TMW-36 do not suggest there is a local source at this location, suggesting the chloride observed in groundwater at these wells has migrated from elsewhere.

h. TMW-37 will be installed approximately 275 feet southeast of TMW-17. Provides additional characterization near TMW-17.

Findings: chloride and TDS in groundwater were reported at concentrations significantly below the concentrations reported in the center of the plume at TMW-17, TMW-34, and TMW-36 (see table above under item g). Chloride concentrations in the soil of boring TMW-37 do not indicate a local source.

i. TMW-40 will be installed approximately 200 feet southeast of TMW-19. Addresses lack of characterization and assessment between TMW-19 and TMW-18.

Findings: TDS and chloride in Groundwater at TMW-40 were reported at concentrations below those seen in TMW-18 and TMW-19.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-18	08/25/2025	1,330	3,310
TMW-19	08/20/2025	808	2,440
TMW-40	**08/20/2025**	**440**	**1,470**

Chloride concentrations in the soil samples collected from TMW-40 indicate a surface source with elevated chloride concentrations from ground surface to 20 feet bgs. However, this source of chloride does not extend beyond 20 feet, with background levels indicated throughout the remainder of the boring.

j. New 1 (TMW-41) This is a modification (approximately 100 feet east) of the OCD final order well TMW-30. Better defines background concentrations.

Findings: TMW-41 is one of five wells clearly upgradient of the release area and upgradient of any areas of known impact at the Site. Concentrations of TDS and chloride are summarized in the table below. The concentrations in TMW-41 are slightly higher than the other nearby monitoring wells. The soil data for chloride do not reflect a local source.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-11	08/12/2025	380	1,550
TMW-12	08/13/2025	443	1,320
TMW-22	08/20/2025	278	1,090
TMW-28	08/13/2025	325	1,200
TMW-41	**08/11/2025**	**729**	**1,970**

k. New 2 (TMW-42) This is a modification (approximately 100 feet northeast) of the OCD final order well TMW-32. Reduces distance between adjacent wells for more precise characterization.

Findings: TDS and chloride concentrations in groundwater at TMW-42 are similar to that observed in TMW-13 (adjacent south) and higher than the levels reported in TMW-12 (adjacent west), TMW-22 (adjacent east), and TMW-41 (adjacent north).

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-12	08/13/2025	443	1,320
TMW-22	08/20/2025	278	1,090
TMW-41	08/11/2025	729	1,970
TMW-42	**08/11/2025**	**1,320**	**3,290**
TMW-13	08/21/2025	1,620	3,480

The chloride concentrations in the soil samples collected from TMW-42 are at background levels and do not implicate a source in this area of the Site.

l. New 3 (TMW-43) Provides delineation west of TMW-19.

Findings: TDS and chloride concentrations reported in groundwater at TMW-43 are below the concentrations reported in TMW-19, but are above the 3103 standards.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-19	08/20/2025	808	2,440
TMW-43	**08/19/2025**	**606**	**1,620**

Slightly higher than background concentration of chloride was reported in the shallow soil samples but the majority of the chloride concentrations in the remainder of the boring was at background levels. No source is implicated at this location.

m. New 4 (TMW-44) Better defines background concentrations. Provides characterization in the southeast of the Site.

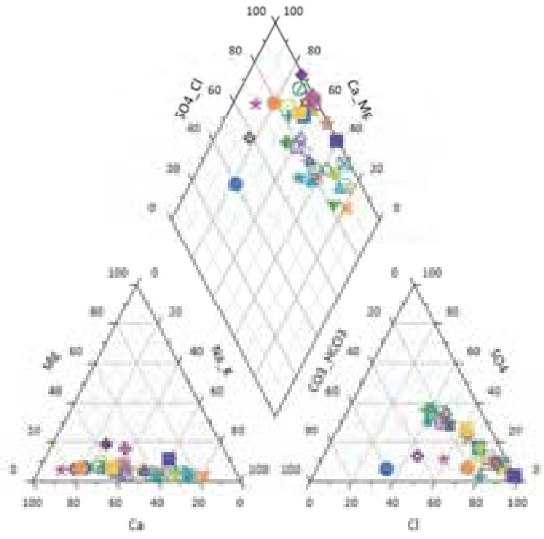
Findings: Groundwater at TMW-44 exhibits TDS (803 mg/L) and chloride (191 mg/L) concentrations below the 3103 standards and provides plume delineation to the southeast.

n. New 5 (TMW-45). Provides downgradient characterization at the southern extent of the release area.

Findings: see discussion for New 6 (TMW-46) below.

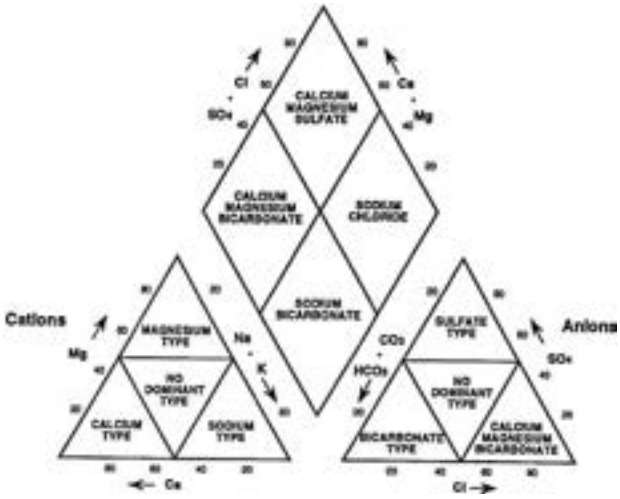
o. New 6 (TMW-46). Provides downgradient characterization at the southeastern extent of the release area.

Findings: Concentrations of TDS and chloride in groundwater at the downgradient extent of the plume are defined by wells TMW-23, TMW-24, TMW-45, and TMW-46. As outlined in the table below, chloride was reported over 250 mg/L in all four of these wells, and TDS was over 1,000 mg/L in three of the four wells.



Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-23	08/20/2025	951	2,130
TMW-24	08/19/2025	273	999
TMW-45	08/21/2025	1,370	3,720
TMW-46	08/21/2025	455	1,580
	Average	**762**	**2,107**

Slightly elevated chloride concentrations in TMW-45 and TMW-46 were observed near surface soil (tope 20 feet or less) but the concentrations at greater depths reflected background levels, indicating that the chloride in this area of the Site migrated from an upgradient source.



Groundwater General Chemistry

Analytical data from the August 2025 groundwater sampling event was evaluated using Piper diagrams to characterize groundwater conditions at the individual well locations (**Figure 11**). Piper diagrams show the relative proportions of major cations and anions separately on individual ternary plots, with the results from the ternary plots projected onto a central diamond for comparison and classification purposes[5].

Piper Plot of EBDU Wells (Figure 11)

Generalized Water Types

[5] *Piper, A.M. (1944).* A Graphic Procedure in the Geochemical Interpretation of Water-Analyses*. Transactions of the American Geophysical Union, 25(6), 914–928.*

The groundwater data from EBDU monitoring wells were compared to geochemical data for produced water from the Blinebry and Drinkard units in Lea County obtained from the USGS Produced Water database[6]. The specific produced water data points included in the Piper diagrams were from three datasets:

- PWA – Averages of 81 samples from combined Blinebry and Drinkard Units in Lea County, NM
- PWB – Averages of 62 samples from the Drinkard Unit in Lea County, NM
- PWC – Averages of 19 samples from the Blinebry Unit in Lea County, NM

Water from the EBDU monitoring wells can be categorized mostly as calcium-magnesium sulfate and sodium chloride water types. Within these broad categories several distinctions can be noted.

- TMW-1, TMW-9, TMW-10 and the Windmill are distinguished as having higher proportions of calcium and bicarbonate with lower proportions of sodium-potassium and chloride than the other locations. The chemical signature at these wells is likely a result of the influence of freshwater infiltration in the low area.
- The produced water data, and wells with highest concentrations of chloride and TDS, mostly fall within the calcium-magnesium sulfate type and are characterized with chloride the dominant anion and very low to absent bicarbonate.
- Background wells and wells outside the center of the plume trend into the sodium chloride type and generally show lower proportions of chloride, and higher bicarbonate.
- There is no clear distinction in the data to differentiate between different potential sources of impact across the area.

Discussion

The additional groundwater data provided from the newly installed wells confirms and reinforces the observations from the past monitoring events that there is an area of elevated chloride and TDS in the central portion of the Site centered on TMW-17, TMW-36 and TMW-34. This is an area located approximately 500-600 feet south-southeast of the 2019 release, with a number of wells (e.g. TMW-7, TMW-4, TMW-5, TMW-27) between the center of the plume and the 2019 release location that exhibit lower concentrations of contaminants. Analytical results from soil samples did not identify a local source in the vicinity of the current area of high chloride/TDS concentrations.

There are a number of wells upgradient from the 2019 release area. All of these wells were reported to have concentrations over the groundwater standards of 1,000 mg/L TDS and 250 mg/L chloride as shown in the table presented below. It is not likely that the TDS/chloride in these wells was a result of the 2019 release.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-11	08/12/2025	380	1,550
TMW-12	08/13/2025	443	1,320
TMW-22	08/20/2025	278	1,090
TMW-28	08/13/2025	325	1,200
	Average	**357**	**1,290**

[6] *U.S. Geological Survey. (2023).* National Produced Waters Geochemical Database (Version 3.0) *[Data set]. U.S. Geological Survey. Retrieved from https://www.usgs.gov/tools/us-geological-survey-national-produced-waters-geochemical-database-viewe*

Wells on the downgradient edge of the plume include TMW-24, TMW-45, TMW-23, and TMW-46 (table below). The elevated TDS and chloride at these wells are likely a result of the historic leaching from the former disposal pit at SB-2 and not a result of the 2019 release near TMW-7.

Sample Location	Sample Date	Chloride (mg/L)	TDS (mg/L)
TMW-23	08/20/2025	951	2,130
TMW-24	08/19/2025	273	999
TMW-45	08/21/2025	1,370	3,720
TMW-46	08/21/2025	455	1,580
	Average	**762**	**2,107**

The source of the plume currently centered on TMW-17, TMW-34, and TMW-36 is not known. These wells are 400 feet to 500 feet southeast of the release location and low area. Gradient maps indicate groundwater may flow towards the center of the plume from the low area where the spill accumulated, which may have allowed migration of chloride from the release area to the western portion of this impacted zone (i.e., towards TMW-31 and maybe TMW-36) but it is not likely that contaminants could have migrated to the eastern areas of the impacted zone (i.e., TMW-17 or TMW-34). More significantly, the monitoring wells located between the center of the plume and the 2019 release location have consistently exhibited lower concentrations of contaminants (e.g. TMW-4, TMW-5, TMW-27) than at the center of the current plume (i.e., TMW-17, TMW-34, and TMW-36). Migration from the 2019 release is therefore highly unlikely.

Evaluation of the groundwater geochemistry did not identify multiple sources of contaminants which might indicate different releases. This is perhaps unsurprising given the long and complex history of oil & gas operations in the area, with precise sources and volumes of produced water releases being unknown.

Given the data collected and subsequent analysis, it is unlikely that the 2019 release could not have accounted for the extent of observed groundwater impacts in this area. Rather, the more plausible and cause is produced water management practices over the past 100 years of oil & gas production in the area. As Broadhead et al (2004) described, brine which has leached into the ground from surface disposal pits will sink to the base of the aquifer due to its greater density, and can migrate following contours in the surface of the red beds. We do not have sufficient granularity on the topography of the red beds to rule out the possibility that brine from the former disposal pit located near SB-2 has migrated to the area near TMW-34, TMW-17, and TMW-36.

5.0 Conclusion and Summary

Groundwater flow is to the south-southwest with localized flows to the southeast, consistent with past observations. A groundwater high is noted in the area of TMW-1, which is also consistent with past observations. This is likely related to freshwater infiltration into the low area north of the Windmill.

Contaminants of concern in groundwater are chloride and TDS. BTEX and PAHs were not present in groundwater samples from the monitoring wells. Several metals (notably iron, aluminum and boron) and radiological parameters were detected in several wells above the 3103 standards, without a discernable pattern.

TDS and chloride concentrations in groundwater were found to be highest in the center of the project area centered on wells TMW-17, TMW-34, and TMW-36 in an area 400 to 500 feet south and east of the 2019 release location. The concentration of chloride in groundwater correlates strongly with TDS, and was also found to be highest in the center of the project area. The presence of higher TDS/chloride concentrations away from the release area may indicate plume migration away from the source area over time; however, the groundwater gradient and the hydraulic conductivity associated with the aquifer formation type do not fully support this presumption. Thus, the occurrence of higher TDS/chloride concentrations in the center of the Site compared to the source area implies the occurrence of other releases from historical operations.

Soil boring SB-1 was advanced to investigate the barren area at the former drilling pit as a potential source of impacts to groundwater. At this location, chloride in soil was reported above the NMOCD delineation criteria of 600 mg/kg in samples from the ground surface to 15 feet below ground surface (bgs) but did not extend to groundwater.

Soil boring SB-2 was advanced through a former disposal pit to investigate this area as a potential source of impacts to groundwater. At this location, chloride in soil was reported above the NMOCD delineation criteria of 600 mg/kg from the ground surface to the 50 foot bgs termination depth of the boring. There were also several detections of chloride above 600 mg/kg in samples from TMW-30, drilled approximately 60 feet South-Southeast of SB-02. This area suspected of being a former disposal pit was most likely a source of impacts to groundwater.

6.0 Recommendations

Terracon has evaluated the site for the presence of COCs in the on-site soil and groundwater. Based on review of the data Terracon recommends the following:

- Resample all monitoring wells on a semi-annual basis with focus on chloride and TDS only.
- Groundwater samples during future monitoring events should be collected using passive samplers such as HydraSleeves which allow collection of a sample from a discrete interval of the well.
- Evaluate potential density-based stratification in the aquifer by collecting one round of groundwater samples from the top and bottom of the water column in each well to be analyzed for chloride and TDS.
- Develop and submit semi-annual groundwater monitoring reports.

Notes:

Blue denotes concentrations exceeding Closure Criteria as listed in Table 1, 19.15.29 NMAC

Solid font denotes concentrations exceeding laboratory detection limits

Gray font denotes concentrations below laboratory detection limits

U = analyte was analyzed for but not detected

J = estimated value, constituent detected above Method Detection Limit but below the Reporting Limit

*+ = lab control sample or lab control sample duplicate is outside acceptance limits, high biased

F1 = Matrix Spike and/or Matrix Spike Duplicate recovery exceeds control limits

NM_OCD_SO_0_50 = Closure Criteria for Soils Impacted by a Release from Table 1 of NMAC 19.15.29

TPH = Total Petroleum Hydrocarbons

DRO = Diesel Range Organics

GRO = Gasoline Range Organics

ORO = Oil Range Organics

mg/kg = miligram per kilogram

Table 4
Summary of Ground Water Results - Human Health Standard Parameters
EBDU 37 | Lea County, NM
Terracon Project No. AR25P108

Table 4 Footnotes

Blue denotes concentrations exceeding New Mexico Water Quality Control Commission standards
Soilid font denotes concentrations exceeding laboratory detection limits
Gray font denotes concentrations below laboratory detection limits
SDL = laboratory sample detection limit
J = Estimated value, constituent detected above laboratory SDL but below the method quantitation limit (MQL)
--- = Not analyzed
^2 = Calibration Blank is outside acceptance limits
*- = LCS and/or LCSD is outside acceptance limits, low biased
*1 = LCS/LCSD RPD exceeds control limits
*3 = ISTD response or retention time outside acceptable limits
G = The Sample MDC is greater than the requested RL
B = Compound was found in the blank and sample
MDC = Minimun Dectectable Concentration (Radiochemistry)
RL = Reporting Limit or Requested Limit (Radiochemistry)
U = Result is less than the sample detection limit
(-) = The uncertainty level pushing the MDC below zero
HF = Parameter with a holding time of 15 minutes
1. pH and Temperature were also recorded in the field and reported on the Field Parameters Table
2. The original TDS value reported for this sample was 17,900. Please refer to lab report J109606-1 for lab commentary on this result.

DEPTH	MATERIAL DESCRIPTION	INSTALLATION DETAILS
5.0	**Caliche with Sand:** caliche:10yr 8/1, white to light gray, very small to large, subangular, granules. Sand: 10 yr 8.5/1 light grey, medium to coarse gained, poor to moderate sorted with some silt, some topsoil, some roots, some gravel, dry, no odor	Well Completion: 3.25' Protective Steel Stickup
	Sand with silt: yr 8.5/1 light grey, very fine to fine grained, well-medium sorted, with some caliche granules, with some silt and some gravel and topsoil, dry, no odor	Cement
15.0	10yr 8/2 light brown to tan, very fine to fine grained well-medium sorted, with some small to medium subangular sand stones granules, dry, no odor	
20.0	7.5yr 7/4 light brown, very fined to fine grained, poorly sorted, with some grey, small to medium, subangular silt stones, with some small subangular sandstones, some silt, slightly moist, no odor	
		Bentonite
35.0	Calcareous, grey	
40.0	7.5yr 4/6 reddish brown, very fine to fine grained, poor to moderately sorted with small subangular sandstone granules, with some small grey silt stones, moist, chemical odor	
45.0	**Sand with clay**: 5yr 4/6, reddish brown, fine grained, some silt, poorly to moderately sorted, moist, no odor	
		Sand 0.10 Slotted PVC
70.0	-5yr 5/8 reddish brown, very fine to fine grained, poor to med sorted with small subangular sand-stone granules, with some small grey silt stones, moist, no odor	
75.0	**Sandy Clay: sand:** 5yr 4/6, dark brown to reddish, medium to coarse grained, well sorted Clay: 5yr 4/6, dark brown to reddish, pliable, low to medium plasticity, with medium to large subangular, grey siltstones, moist, no odor

Terracon FIELD ACTIVITY LOG

Date: 08/05/25

PROJECT NAME: Apache - EBDU PROJECT NO. K8252108

Field Activity Subject: Drilling Monitoring Wells

Description of Activities and Events:

Calibrated PID, passed ✓

Arrived on location at 6:00 am. Met w/ drill crew. Had safety talk and signed JSA for Terracon and Talon. Arrived at TMW-41 at 0900, because we found out that the route to TMW-28 was impassable for the drill Rig. We would have to cross over a flow line and Talon will not drive the drill rig over any lines without a caliche ramp. TMW-41 well location was moved due to being too close to flow lines and electrical lines. Drilling for this well was completed around 1300. Had to OK so long because the hole of the well kept sluffing into itself, so I had the drillers drill out the sluff until it stopped. TD @ 90', Bottom of screen @ 87' because the contact of the red beds was seen there, Tom Larson wanted 50' screen, so top of screen is @ 37'. Left TMW-41 @ 1430 and arrived at TMW-42 @ 1440. Started drilling @ 1500 and completed around 1700. TD @ 90', Red bed @ 87'. Bottom of screen @ 87' with 50' of screen. Top of screen @ 37' per Tom's request. Left location by 1745 and arrived at the hotel @ 1815.

Corrisponded with John Grams about moving well locations due to being too close to flow lines and electrical lines. Such as TMW-41 and TMW-33. They have new GPS locations. Please call me or John for those new coordinates if you need them. We also addressed about the pathways not being big enough for the drill rig to maneuver around and the areas around each well is not big enough for the drill rig. John grams is having someone come out tomorrow to address these issues. The person who is operating the back hoe, is also building caliche ramps over all the flow lines to get to a good chunk of the wells. He will also develope a map of all the lines.

SKETCH

N/A

Changes from Plans & Specification, and Other Special Orders Important Decisions:

Weather Conditions: High of 104°F, Low of 76°F, Sunny, Winds of SE 22mph - 30.6mph	Important Telephone Calls: Multiple calls with John Grams, Tom Larson, Dudley Womble, and Lan Bundy
Personnel On Site: Drill crew, Tom Larson, Racheal Hill, and Stevie McDermaid. Drill crew = Talon	Visitors On Site: Barrett Bole

Jose Salas 08/05/25

Arcun Salas 08/05/25

JOB SAFETY ANALYSIS

THE JOB SAFETY ANALYSIS WORKSHEET AND CHECKLIST ON BACK OF PAGE MUST BE COMPLETED EVERYDAY PRIOR STARTING WORK WITH ALL FIELD CREW MEMBERS AT THE SITE.

Date: 08/05/25

JOB SAFETY ANALYSIS

Consider the following and check the items which apply to the job, then review them with the work crew (Terracon Personnel and Subcontractor Personnel)

Permits
- ☐ Excavation / Trench ("One Call" Made)
- ☐ Cold Work
- ☐ Hot Work
- ☐ Entry Permit / Confined Space
- ☐ Line Breaking
- ☐ Signed Off When Complete
- ☐ Lock Out / Tag Out
- ☐ Other

ACCESS
- ☐ Scaffold (Properly Inspected _____)
- ☐ Ladder (Tied Off)
- ☐ Man Lift (Inspected)
- ☐ Personnel Basket (Inspected and Approved)
- ☐ Operator Training
- ☐ Other_____

Welding
- ☐ Flash burns
- ☐ Combustibles
- ☐ Spark Containment
- ☐ Shields
- ☐ Grounding
- ☐ Fire Extinguisher
- ☐ Water Hose
- ☐ Fire Blanket
- ☐ Fire Watch
- ☐ Leads routed overhead 7 ft / not in walk way
- ☐ Sewer Covers

Overhead Work
- ☐ Barricades
- ☐ Hole Cover
- ☐ Signs
- ☐ Handrail

Hazards (Environmental)
- ☐ Electric Shock
- ☒ Heat Stress
- ☒ Heavy Objects
- ☐ Hot / Cold Surfaces or materials
- ☐ Inadequate Lighting
- ☐ Line Breaking
- ☒ Noise
- ☐ Sharp Objects
- ☒ Contaminated Soil / Groundwater
- ☐ Poor Access / Egress
- ☐ Other

Tools
- ☒ Proper Tools for the job
- ☒ Good Tool Condition
- ☒ Qualifications
- ☐ Current Inspection
- ☐ Tool Tether
- ☐ Tool Lanyards
- ☐ Other _____

Electrical
- ☐ Locked & Tagged Out
- ☐ Try Start / Stop Switch
- ☐ GFCI Test
- ☐ Assured Grounding
- ☐ Extension Cord Inspection

OTHER WORK IN AREA
- ☐ Others Working Overhead
- ☐ Type of Work Others are Performing: _____
- ☐ PPE Required because of Other Work in Area
- ☐ Other

Hazards / Body
- ☐ Fall Protection
- ☒ Pinch Points
- ☒ Slip-Trip Potential
- ☐ Other

HAZARDS / CHEMICALS
- ☐ Chemical Burns - Skin / Eyes
- ☐ Flammable
- ☐ Ingestion
- ☐ Inhalation
- ☐ Skin Contamination
- ☐ Other

CONFINED SPACE KNOW THE FOLLOWING
Possible Hazards within the Confined Space
- First Signs of Exposure
- How to Call for HELP
- How to Track Personnel
- Entering and Exiting the Confined Space
- Maintain Contact with all Entrants by Voice or Visual

Do Not Attempt to Rescue Unless you are a part of a Trained Confined Space Rescue Team

CONFINED SPACE KNOW THE FOLLOWING

Possible Hazards within the Confined Space

- First Signs of Exposure
- How to Call for HELP
- How to Track Personnel
- Entering and Exiting the Confined Space
- Maintain Contact with all Entrants by Voice or Visual

Do Not Attempt to Rescue Unless you are a part of a Trained Confined Space Rescue Team

Remain at Entry Point, Assume No Duties that will take you from there

Signs Posted to Identify Confined Space?

- ☒ Flame Retardant Clothing
- ☐ Chemical Resistant Clothing
- ☒ Other

Worksite Stretches:

- Before shift / Pre-task / End of shift
- Stretch to a point you feel a mild tension and relax as you hold the stretch
- Stretches should be held for 10-30 Seconds.
- Always stretch within you comfort limits, never to the point of pain

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8575-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

REVISION

The report being provided is a revision of the original report sent on 8/14/2025. The report (revision 1) is being revised due to Revised report to re-run possible lab contamination..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/6/2025 10:58 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.4°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW - 42 (0-5) (890-8575-1), TMW - 42 (5-10) (890-8575-2), TMW - 42 (10-15) (890-8575-3), TMW - 42 (15-20) (890-8575-4), TMW - 42 (20-25) (890-8575-5), TMW - 42 (25-30) (890-8575-6), TMW - 42 (30-35) (890-8575-7), TMW - 42 (35-40) (890-8575-8), TMW - 42 (40-45) (890-8575-9), TMW - 42 (45-50) (890-8575-10), TMW - 42 (50-55) (890-8575-11), TMW - 42 (55-60) (890-8575-12) and (890-8575-13).

GC/MS VOA
Method 8260D: Sample is in a bulk jar.

TMW - 42 (10-15) (890-8575-3), TMW - 42 (15-20) (890-8575-4), TMW - 42 (20-25) (890-8575-5), TMW - 42 (25-30) (890-8575-6), TMW - 42 (30-35) (890-8575-7), TMW - 42 (35-40) (890-8575-8), TMW - 42 (40-45) (890-8575-9), TMW - 42 (45-50) (890-8575-10), TMW - 42 (50-55) (890-8575-11), TMW - 42 (55-60) (890-8575-12), (890-8583-B-10-A) and (890-8583-A-10-C MS)

Method 8260D: Sample failed ISTD twice so methanol was used for analysis.

TMW - 42 (40-45) (890-8575-9) and (890-8575-B-9-B MS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116032 and analytical batch 880-116451 was outside the upper control limits.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-116005/2-A) and (LCSD 880-116005/3-A). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116005 and analytical batch 880-116445 was outside the upper control limits.

Method 8015MOD_NM: The method blank for preparation batch 880-116005 and analytical batch 880-116445 contained Oil Range Organics (Over C28-C36) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8575-1
Project: EBDU 37

Job ID: 890-8575-1 (Continued) Eurofins Carlsbad

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCS 880-116032/2-A). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-116032 and analytical batch 880-116451 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD_NM: The method blank for preparation batch 880-116032 and analytical batch 880-116451 contained Diesel Range Organics (Over C10-C28) and Oil Range Organics (Over C28-C36) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8575-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8575-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

JOB NUMBER

890-8583-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Project/Site: EBDU 37

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Project: EBDU 37

Job ID: 890-8583-1 **Eurofins Carlsbad**

Job Narrative
890-8583-1

REVISION

The report being provided is a revision of the original report sent on 8/14/2025. The report (revision 1) is being revised due to Revised report to review possible lab contamination.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/7/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.4°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW-33 (0-5) (890-8583-1), TMW-33 (5-10) (890-8583-2), TMW-33 (10-15) (890-8583-3), TMW-33 (15-20) (890-8583-4), TMW-33 (20-25) (890-8583-5), TMW-33 (25-30) (890-8583-6), TMW-33 (30-35) (890-8583-7), TMW-33 (35-40) (890-8583-8), TMW-33 (40-45) (890-8583-9), TMW-33 (45-50) (890-8583-10), TMW-33 (50-55) (890-8583-11) and TMW-33 (55-60) (890-8583-12).

GC/MS VOA
Method 8260D: Samples are in a bulk jar

TMW-33 (50-55) (890-8583-11), TMW-33 (55-60) (890-8583-12), (890-8584-B-5-A) and (890-8584-B-5-B MS)

Method 8260D: Sample is in a bulk jar.

TMW-33 (0-5) (890-8583-1), TMW-33 (5-10) (890-8583-2), TMW-33 (10-15) (890-8583-3), TMW-33 (15-20) (890-8583-4), TMW-33 (20-25) (890-8583-5), TMW-33 (25-30) (890-8583-6), TMW-33 (30-35) (890-8583-7), TMW-33 (35-40) (890-8583-8), TMW-33 (40-45) (890-8583-9), TMW-33 (45-50) (890-8583-10) and (890-8583-A-10-C MS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The method blank for preparation batch 880-116230 and analytical batch 880-116700 contained Gasoline Range Organics (GRO)-C6-C10 above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-116230 and analytical batch 880-116700 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (890-8583-A-1-B MS) and (890-8583-A-1-C MSD). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116230 and analytical batch 880-116700 was outside the upper control limits.

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8583-1
Project: EBDU 37

Job ID: 890-8583-1 (Continued) Eurofins Carlsbad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8583-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8583-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Project: EBDU 37

Job ID: 890-8584-1 Eurofins Carlsbad

Job Narrative
890-8584-1

REVISION

The report being provided is a revision of the original report sent on 8/14/2025. The report (revision 1) is being revised due to Revised report to review possible lab contamination near the detection limit..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/7/2025 9:25 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.4°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW - 44 (0 - 5) (890-8584-1), TMW - 44 (5 - 10) (890-8584-2), TMW - 44 (10 - 15) (890-8584-3), TMW - 44 (15 - 20) (890-8584-4), TMW - 44 (20 - 25) (890-8584-5), TMW - 44 (25 - 30) (890-8584-6), TMW - 44 (30 - 35) (890-8584-7), TMW - 44 (35 - 40) (890-8584-8), TMW - 44 (40 - 45) (890-8584-9), TMW - 44 (45 - 50) (890-8584-10), TMW - 44 (50 - 55) (890-8584-11) and TMW - 44 (55 - 60) (890-8584-12).

GC/MS VOA
Method 8260D: Samples are in a bulk jar

TMW - 44 (0 - 5) (890-8584-1), TMW - 44 (5 - 10) (890-8584-2), TMW - 44 (10 - 15) (890-8584-3), TMW - 44 (15 - 20) (890-8584-4), TMW - 44 (20 - 25) (890-8584-5) and (890-8584-B-5-B MS)

Method 8260D: Sample is in a bulk jar.

TMW - 44 (25 - 30) (890-8584-6), TMW - 44 (30 - 35) (890-8584-7), TMW - 44 (35 - 40) (890-8584-8), TMW - 44 (40 - 45) (890-8584-9), TMW - 44 (45 - 50) (890-8584-10), TMW - 44 (50 - 55) (890-8584-11) and TMW - 44 (55 - 60) (890-8584-12)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The method blank for preparation batch 880-116231 and analytical batch 880-116617 contained Gasoline Range Organics (GRO)-C6-C10 above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: The method blank for preparation batch 880-116230 and analytical batch 880-116700 contained Gasoline Range Organics (GRO)-C6-C10 above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116230 and analytical batch 880-116700 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8584-1
Project: EBDU 37

Job ID: 890-8584-1 (Continued) Eurofins Carlsbad

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8584-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8584-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

Note. Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

Possible Hazard Identification: Unconfirmed	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): ☐ Return To Client ☐ Disposal By Lab ☐ Archive For ____ Months

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 8/19/2025 4:41:53 PM

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8585-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8585-1
Project: EBDU 37

Job ID: 890-8585-1 **Eurofins Carlsbad**

Job Narrative
890-8585-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/7/2025 9:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.4°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW - 46 (0-5) (890-8585-1), TMW - 46 (5-10) (890-8585-2), TMW - 46 (10-15) (890-8585-3), TMW - 46 (15-20) (890-8585-4), TMW - 46 (20-25) (890-8585-5), TMW - 46 (25-30) (890-8585-6), TMW - 46 (30-35) (890-8585-7), TMW - 46 (35-40) (890-8585-8), TMW - 46 (40-45) (890-8585-9), TMW - 46 (45-50) (890-8585-10), TMW - 46 (50-55) (890-8585-11), TMW - 46 (55-60) (890-8585-12) and DUP - 2 - 5 (890-8585-13).

GC/MS VOA
Method 8260D: Samples are in a bulk jar

TMW - 46 (0-5) (890-8585-1), TMW - 46 (5-10) (890-8585-2), TMW - 46 (10-15) (890-8585-3), TMW - 46 (15-20) (890-8585-4), TMW - 46 (20-25) (890-8585-5), TMW - 46 (25-30) (890-8585-6), TMW - 46 (30-35) (890-8585-7), TMW - 46 (35-40) (890-8585-8), TMW - 46 (40-45) (890-8585-9), TMW - 46 (45-50) (890-8585-10), TMW - 46 (50-55) (890-8585-11), TMW - 46 (55-60) (890-8585-12), DUP - 2 - 5 (890-8585-13), (890-8584-B-5-A) and (890-8584-B-5-B MS)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The method blank for preparation batch 880-116231 and analytical batch 880-116617 contained Gasoline Range Organics (GRO)-C6-C10 above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists Job ID: 890-8585-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

Possible Hazard Identification: Unconfirmed	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month): ☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 8/19/2025 4:45:00 PM

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8599-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8599-1
Project: EBDU 37

Job ID: 890-8599-1 Eurofins Carlsbad

Job Narrative
890-8599-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/8/2025 9:41 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.6°C.

Receipt Exceptions
The following were received and analyzed from an unpreserved bulk soil jar: TMW - 45 (0-5) (890-8599-1), TMW - 45 (5-10) (890-8599-2), TMW - 45 (10-15) (890-8599-3), TMW - 45 (15-20) (890-8599-4), TMW - 45 (20-25) (890-8599-5), TMW - 45 (25-30) (890-8599-6), TMW - 45 (30-35) (890-8599-7), TMW - 45 (35-40) (890-8599-8), TMW - 45 (40-45) (890-8599-9), TMW - 45 (45-50) (890-8599-10), TMW - 45 (50-55) (890-8599-11) and DUP - 3 - S (890-8599-12).

GC/MS VOA
Method 8260D: The following sample was diluted due to it being rocks: TMW - 45 (10-15) (890-8599-3). Elevated reporting limits (RL) are provided. Sample prepped with methanol from a bulk jar.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: DUP - 3 - S (890-8599-12). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116430 and analytical batch 880-116743 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8599-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8599-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8600-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8600-1
Project: EBDU 37

Job ID: 890-8600-1 Eurofins Carlsbad

Job Narrative
890-8600-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/8/2025 9:41 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.6°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW-43 (0-5) (890-8600-1), TMW-43 (5-10) (890-8600-2), TMW-43 (10-15) (890-8600-3), TMW-43 (15-20) (890-8600-4), TMW-43 (20-25) (890-8600-5), TMW-43 (25-30) (890-8600-6), TMW-43 (30-35) (890-8600-7), TMW-43 (35-40) (890-8600-8), TMW-43 (40-45) (890-8600-9), TMW-43 (45-50) (890-8600-10), TMW-43 (50-55) (890-8600-11) and TMW-43 (55-60) (890-8600-12).

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-116409 and analytical batch 880-116859 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8600-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8613-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8613-1
Project: EBDU 37

Job ID: 890-8613-1 Eurofins Carlsbad

Job Narrative
890-8613-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/11/2025 10:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.2°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW - 27 (0-5) (890-8613-1), TMW - 27 (5-10) (890-8613-2), TMW - 27 (10-15) (890-8613-3), TMW - 27 (15-20) (890-8613-4), TMW - 27 (20-25) (890-8613-5), TMW - 27 (25-30) (890-8613-6), TMW - 27 (30-35) (890-8613-7), TMW - 27 (35-40) (890-8613-8), TMW - 27 (40-45) (890-8613-9), TMW - 27 (45-50) (890-8613-10), TMW - 27 (50-55) (890-8613-11) and TMW - 27 (55-60) (890-8613-12).

GC/MS VOA
Method 8260D: Samples are in a bulk jar

TMW - 27 (5-10) (890-8613-2), TMW - 27 (10-15) (890-8613-3), TMW - 27 (15-20) (890-8613-4), TMW - 27 (20-25) (890-8613-5), TMW - 27 (25-30) (890-8613-6), TMW - 27 (30-35) (890-8613-7), TMW - 27 (35-40) (890-8613-8), TMW - 27 (40-45) (890-8613-9), TMW - 27 (45-50) (890-8613-10) and TMW - 27 (50-55) (890-8613-11)

Method 8260D: Sample is in a bulk jar.

TMW - 27 (50-55) (890-8613-11) and TMW - 27 (55-60) (890-8613-12)

Method 8260D: Sample is in a bulk jar.

TMW - 27 (0-5) (890-8613-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: TMW - 27 (0-5) (890-8613-1), TMW - 27 (15-20) (890-8613-4), TMW - 27 (20-25) (890-8613-5) and TMW - 27 (35-40) (890-8613-8). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: TMW - 27 (10-15) (890-8613-3) and (890-8599-A-12-B). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116430 and analytical batch 880-116743 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8613-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 8/19/2025 10:26:46 PM

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8614-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8614-1
Project: EBDU 37

Job ID: 890-8614-1 Eurofins Carlsbad

Job Narrative
890-8614-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/11/2025 10:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.2°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: TMW 40 - (0-5) (890-8614-1), TMW 40 - (5-10) (890-8614-2), TMW 40 - (10-15) (890-8614-3), TMW 40 - (15-20) (890-8614-4), TMW 40 - (20-25) (890-8614-5), TMW 40 - (25-30) (890-8614-6), TMW 40 - (30-35) (890-8614-7), TMW 40 - (35-40) (890-8614-8), TMW 40 - (40-45) (890-8614-9), TMW 40 - (45-50) (890-8614-10), TMW 40 - (50-55) (890-8614-11) and TMW 40 - (55-60) (890-8614-12).

GC/MS VOA
Method 8260D: The following samples were diluted due to it being rocks: TMW 40 - (5-10) (890-8614-2) and TMW 40 - (10-15) (890-8614-3). Elevated reporting limits (RL) are provided. Sample prepped with methanol from a bulk jar.

Method 8260D: Sample is in a bulk jar.

TMW 40 - (0-5) (890-8614-1), TMW 40 - (15-20) (890-8614-4), TMW 40 - (20-25) (890-8614-5), TMW 40 - (25-30) (890-8614-6), TMW 40 - (30-35) (890-8614-7), TMW 40 - (35-40) (890-8614-8), TMW 40 - (40-45) (890-8614-9), TMW 40 - (45-50) (890-8614-10), TMW 40 - (50-55) (890-8614-11) and TMW 40 - (55-60) (890-8614-12)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: TMW 40 - (0-5) (890-8614-1), TMW 40 - (10-15) (890-8614-3) and TMW 40 - (20-25) (890-8614-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116430 and analytical batch 880-116743 was outside the upper control limits.

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-116849 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is:(CCV 880-116849/70).

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-116431/2-A) and (LCSD 880-116431/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116431 and analytical batch 880-116849 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8614-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 8/25/2025 5:06:28 PM Revision 2

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8574-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 890-8574-1 **Eurofins Carlsbad**

Job Narrative
890-8574-1

REVISION

The report being provided is a revision of the original report sent on 8/14/2025. The report (revision 2) is being revised due to Client requested some valid value changes and to exclude the MS/MSD samples.

Report revision history
Revision 1 - 8/19/2025 - Reason - Revised report due to instrument contamination below regulatory levels..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/6/2025 10:58 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.4°C.

GC/MS VOA
Method 8260D: Sample is in a bulk jar.

TMW-41 (5-10) (890-8574-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-116005/2-A) and (LCSD 880-116005/3-A). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116005 and analytical batch 880-116445 was outside the upper control limits.

Method 8015MOD_NM: The method blank for preparation batch 880-116005 and analytical batch 880-116445 contained Oil Range Organics (Over C28-C36) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8574-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8574-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing South Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing South Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing South Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing South Central, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For ____ Months

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 8/25/2025 4:04:16 PM

JOB DESCRIPTION

EBDU 37

JOB NUMBER

890-8616-1

Eurofins Carlsbad
1089 N Canal St.
Carlsbad NM 88220

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Carlsbad

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8616-1
Project: EBDU 37

Job ID: 890-8616-1 Eurofins Carlsbad

Job Narrative
890-8616-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/11/2025 10:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.2°C.

Receipt Exceptions
The following samples were received and analyzed from an unpreserved bulk soil jar: DUP - 4 - S (890-8616-1), TMW - 28 (0-5) (890-8616-2), TMW - 28 (5-10) (890-8616-3), TMW - 28 (10-15) (890-8616-4), TMW - 28 (15-20) (890-8616-5), TMW - 28 (20-25) (890-8616-6), TMW - 28 (25-30) (890-8616-7), TMW - 28 (30-35) (890-8616-8), TMW - 28 (35-40) (890-8616-9), TMW - 28 (40-45) (890-8616-10), TMW - 28 (45-50) (890-8616-11), TMW - 28 (50-55) (890-8616-12) and TMW - 28 (55-60) (890-8616-13).

The following samples were received and analyzed from an unpreserved bulk soil jar: DUP - 4 - S (890-8616-1), TMW - 28 (0-5) (890-8616-2), TMW - 28 (5-10) (890-8616-3), TMW - 28 (10-15) (890-8616-4), TMW - 28 (15-20) (890-8616-5), TMW - 28 (20-25) (890-8616-6), TMW - 28 (25-30) (890-8616-7), TMW - 28 (30-35) (890-8616-8), TMW - 28 (35-40) (890-8616-9), TMW - 28 (40-45) (890-8616-10), TMW - 28 (45-50) (890-8616-11), TMW - 28 (50-55) (890-8616-12) and TMW - 28 (55-60) (890-8616-13).

GC/MS VOA
Method 8260D: The following samples were diluted due to it being rocks: DUP - 4 - S (890-8616-1), TMW - 28 (5-10) (890-8616-3) and TMW - 28 (10-15) (890-8616-4). Elevated reporting limits (RL) are provided. Sample prepped with methanol from a bulk jar.

Method 8260D: Sample is in a bulk jar.

TMW - 28 (0-5) (890-8616-2), TMW - 28 (15-20) (890-8616-5), TMW - 28 (20-25) (890-8616-6) and TMW - 28 (25-30) (890-8616-7)

Method 8260D: Sample is in a bulk jar

TMW - 28 (25-30) (890-8616-7)

Method 8260D: Sample is in a bulk jar.

TMW - 28 (30-35) (890-8616-8), TMW - 28 (35-40) (890-8616-9), TMW - 28 (40-45) (890-8616-10), TMW - 28 (45-50) (890-8616-11) and TMW - 28 (50-55) (890-8616-12)

Method 8260D: Sample is in a bulk jar.

TMW - 28 (55-60) (890-8616-13)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: The method blank for preparation batch 880-116431 and analytical batch 880-116849 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 890-8616-1
Project: EBDU 37

Job ID: 890-8616-1 (Continued) Eurofins Carlsbad

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-116849 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is:(CCV 880-116849/70).

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-116431/2-A) and (LCSD 880-116431/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116431 and analytical batch 880-116849 was outside the upper control limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: DUP - 4 - S (890-8616-1). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists
Job ID: 890-8616-1
Project/Site: EBDU 37

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 890-8616-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	N/A	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: John Grams
Terracon Consulting Eng & Scientists
5847 50th St
Lubbock, Texas 79424

Generated 9/18/2025 2:19:36 PM Revision 2

JOB DESCRIPTION

EBDU 37

JOB NUMBER

880-61361-1

Eurofins Midland
1211 W. Florida Ave
Midland TX 79701

See page two for job notes and contact information.

Released to Imaging: 3/12/2026 2:34:25 PM

Eurofins Midland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job Narrative
880-61361-1

REVISION

The report being provided is a revision of the original report sent on 8/28/2025. The report (revision 2) is being revised due to Revised report to verify results for sample 36 per client request. After several re-runs and re-extractions the lab has determined the original detection was not TPH. The original result has been corrected and one of the several re-runs of data is also included here as secondary data to support this decision

Report revision history
Revision 1 - 8/28/2025 - Reason - Revised report to correct transcription error from the COC..

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/12/2025 10:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C.

GC/MS VOA
Method 8260D: Samples are in a bulk jar

TMW-34 (5-10) (880-61361-15), TMW-34 (10-15) (880-61361-16), TMW-34 (15-20) (880-61361-17), TMW-34 (20-25) (880-61361-18), TMW-36 (50-55) (880-61361-81), SB-2 (40) (880-61361-82) and SB-2 (50) (880-61361-84)

Method 8260D: Sample is in a bulk jar.

TMW-34 (85-90) (880-61361-31), TMW-36 (55-60) (880-61361-32), TMW-36 (60-65) (880-61361-33), TMW-36 (70-75) (880-61361-35), TMW-36 (20-25) (880-61361-75), TMW-36 (30-35) (880-61361-77), TMW-36 (35-40) (880-61361-78), TMW-36 (40-45) (880-61361-79), TMW-36 (45-50) (880-61361-80) and SB-2 (45) (880-61361-83)

Method 8260D: Sample is in a bulk jar.

TMW-34 (55-60) (880-61361-25), TMW-34 (60-65) (880-61361-26), TMW-34 (65-70) (880-61361-27), TMW-34 (70-75) (880-61361-28), TMW-34 (75-80) (880-61361-29), TMW-34 (80-85) (880-61361-30), TMW-36 (65-70) (880-61361-34), TMW-36 (75-80) (880-61361-36), TMW-31 (0-5) (880-61361-37), TMW-31 (5-10) (880-61361-38), TMW-30 (75-80) (880-61361-69), TMW-30 (80-85) (880-61361-70), TMW-36 (0-5) (880-61361-71), TMW-36 (5-10) (880-61361-72), TMW-36 (10-15) (880-61361-73), TMW-36 (15-20) (880-61361-74), TMW-36 (25-30) (880-61361-76), SB-2 (35) (880-61361-97), SB-1 (50) (880-61361-99) and SB-1 (05) (880-61361-100)

Method 8260D: Sample is in a bulk jar.

SB-1 (01) (880-61361-98), SB-1 (10) (880-61361-101), SB-1 (15) (880-61361-102), SB-1 (20) (880-61361-103), SB-1 (30) (880-61361-105) and SB-1 (35) (880-61361-106)

Method 8260D: The following samples were diluted due to it being rocks: TMW-30 (0-5) (880-61361-54) and SB-2 (6) (880-61361-88). Elevated reporting limits (RL) are provided. Sample prepped with methanol from a bulk jar.

Job ID: 880-61361-1 (Continued) Eurofins Midland

Method 8260D: Sample is in a bulk jar.

TMW-31 (15-20) (880-61361-40), TMW-31 (20-25) (880-61361-41), TMW-31 (25-30) (880-61361-42), TMW-31 (30-35) (880-61361-43), TMW-31 (35-40) (880-61361-44), TMW-31 (40-45) (880-61361-45), TMW-31 (45-50) (880-61361-46), TMW-31 (50-55) (880-61361-47), TMW-31 (55-60) (880-61361-48), TMW-31 (60-65) (880-61361-49), TMW-31 (65-70) (880-61361-50), TMW-31 (70-75) (880-61361-51), TMW-31 (75-80) (880-61361-52), DUP-6-S (880-61361-53), TMW-30 (35-40) (880-61361-61), TMW-30 (40-45) (880-61361-62), DUP-7-S (880-61361-86) and SB-2 (8) (880-61361-89)

Method 8260D: The following samples were diluted due to it being rocks: SB-2 (4-4.5) (880-61361-87) and SB-2 (2.5-3) (880-61361-109). Elevated reporting limits (RL) are provided. Sample prepped with methanol from a bulk jar.

Method 8260D: Sample is in a bulk jar.

TMW-30 (15-20) (880-61361-57), TMW-30 (20-25) (880-61361-58), SB-2 (10) (880-61361-90), SB-1 (40) (880-61361-107), SB-1 (45) (880-61361-108), SB-2 (2.5-3) (880-61361-109) and SB-2 (30) (880-61361-110)

Method 8260D: Sample is in a bulk jar.

TMW-37 (0-5) (880-61361-2), TMW-37 (5-10) (880-61361-3), TMW-37 (15-20) (880-61361-5), TMW-37 (20-25) (880-61361-6), TMW-37 (25-30) (880-61361-7), TMW-37 (30-35) (880-61361-8) and TMW-30 (5-10) (880-61361-55)

Method 8260D: Sample is in a bulk jar.

TMW-37 (10-15) (880-61361-4), TMW-34 (15-20) (880-61361-17), TMW-30 (10-15) (880-61361-56), TMW-30 (25-30) (880-61361-59), TMW-30 (30-35) (880-61361-60) and SB-2 (0-2.5) (880-61361-85)

Method 8260D: Sample is in a bulk jar.

TMW-30 (45-50) (880-61361-63), TMW-30 (50-55) (880-61361-64), TMW-30 (55-60) (880-61361-65), TMW-30 (60-65) (880-61361-66), TMW-30 (65-70) (880-61361-67), SB-2 (12) (880-61361-91), SB-2 (15) (880-61361-92), SB-2 (18) (880-61361-93), DUP8-S (880-61361-94) and SB-2 (25) (880-61361-96)

Method 8260D: Sample is in a bulk jar.

TMW-37 (45-50) (880-61361-11), TMW-37 (50-55) (880-61361-12), TMW-37 (55-60) (880-61361-13), TMW-34 (0-5) (880-61361-14), TMW-34 (25-30) (880-61361-19), TMW-34 (30-35) (880-61361-20), TMW-34 (35-40) (880-61361-21), TMW-34 (40-45) (880-61361-22), TMW-34 (45-50) (880-61361-23) and TMW-34 (50-55) (880-61361-24)

Method 8260D: The following sample was diluted due to the nature of the sample matrix: DUP-5-S (880-61361-1). Elevated reporting limits (RLs) are provided.

Method 8260D: Samples are in a bulk jar

TMW-37 (35-40) (880-61361-9), TMW-37 (40-45) (880-61361-10), TMW-31 (10-15) (880-61361-39), TMW-30 (70-75) (880-61361-68) and SB-2 (20) (880-61361-95)

Method 8260D: Sample is in a bulk jar.

SB-1 (25) (880-61361-104)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: TMW-36 (70-75) (880-61361-35). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-116431 and analytical batch 880-116849 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Eurofins Midland

Case Narrative

Client: Terracon Consulting Eng & Scientists Job ID: 880-61361-1
Project: EBDU 37

Job ID: 880-61361-1 (Continued) Eurofins Midland

Method 8015MOD_NM: The method blank for preparation batch 880-116506 and analytical batch 880-116849 contained Diesel Range Organics (Over C10-C28) and Oil Range Organics (Over C28-C36) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-116849 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated samples are:(CCV 880-116849/70) and (CCV 880-116849/97).

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-116431/2-A), (LCS 880-116506/2-A), (LCSD 880-116431/3-A) and (LCSD 880-116506/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-116431 and 880-116506 and analytical batch 880-116849 was outside the upper control limits.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: TMW-30 (20-25) (880-61361-58), TMW-30 (25-30) (880-61361-59) and TMW-30 (30-35) (880-61361-60). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-116509 and analytical batch 880-116921 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The method blank for preparation batch 880-116509 and analytical batch 880-116921 contained Oil Range Organics (Over C28-C36) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SB-2 (4-4.5) (880-61361-87). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCS 880-118687/2-A). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015MOD_NM: Reanalysis of the following sample was performed outside of the analytical holding time.: TMW-36 (75-80) (880-61361-36).

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (880-60970-A-32-C MB). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The original sample analysis had a contaminant that was reported as TPH but does not appear to be such based off the chromatography. The sample was reanalyzed out of hold and was reported as secondary.

TMW-36 (75-80) (880-61361-36)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-116501 and analytical batch 880-116601 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-116502 and analytical batch 880-116610 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Terracon Consulting Eng & Scientists Job ID: 880-61361-1
Project/Site: EBDU 37

Laboratory: Eurofins Midland

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704400	06-30-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015 NM		Solid	Total TPH

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Texas	NELAP	T104704215	08-25-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Total BTEX		Solid	Total BTEX

Method Summary

Client: Terracon Consulting Eng & Scientists
Project/Site: EBDU 37

Job ID: 880-61361-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
Total BTEX	Total BTEX Calculation	TAL SOP	EET HOU
8015 NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
8015B NM	Diesel Range Organics (DRO) (GC)	SW846	EET MID
300.0	Anions, Ion Chromatography	EPA	EET MID
5035	Closed System Purge and Trap	SW846	EET HOU
8015NM Prep	Microextraction	SW846	EET MID
DI Leach	Deionized Water Leaching Procedure	ASTM	EET MID
