None.

ATTORNEYS

STATEMENT OF THE CASE

Targa seeks authorization to drill and operate a redundant Class II acid gas injection well, the Copperhead AGI No. 2 Well (“Well”), at its Copperhead Gas Processing Facility. The vertical well will be located approximately 1,138 feet from the south line (FSL) and 1,842 feet from the west line (FWL) of Section 13, Township 24 South, Range 32 East, Lea County, New Mexico. The Well will inject treated acid gas into the Siluro-Devonian formation including the Devonian Thirtyone Formation, Upper Silurian Wrysten Group and the Lower Silurian Fusselman Formation

at a depth of approximately 17,299 to 18,699 feet. The Well’s maximum daily injection rate will not exceed 26 million standard cubic feet per day, and the Well’s maximum surface injection pressure will not exceed 3,460 pounds per square inch gauge.

The Well, as proposed in the C-108, will not cause waste, impair correlative rights, or harm public health or the environment, including through the risk of induced seismicity. In addition, the Well will ensure the availability of natural gas treatment capacity, which reduces flaring and is in the public interest. Accordingly, Targa’s application comports with the requirements of the Oil and Gas Act and the Division’s regulations and should be approved.

PROPOSED EVIDENCE

Witness	Occupation	Estimated Time	Exhibits
Matt Eales	Environmental Engineer	Affidavit	Approx. 3
Tuhin Biswas	Geologist	Affidavit	Approx. 2
Hassan Khaniani	Geologist	Affidavit	Approx. 2
Jiyue (Jessie) Wu	Reservoir Engineer	Affidavit	Approx. 2
Paul Ragsdale	Drilling Engineer	Affidavit	Approx. 1

PROCEDURAL MATTERS

Applicant will present this matter by affidavit if there is no opposition to its application.

Respectfully submitted,

HARDY McLEAN LLC
