RE: Response to Disapproval
Rail Car Loading Area Release Soil Sampling Investigation Report
Western Refining Southwest LLC, Marathon Gallup Refinery
EPA ID# NMD000333211
HWB-WRG-21-026

Dear Mr. Shean:

Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery) is submitting this response to disapproval contained in the New Mexico Environment Department (NMED) *Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report* letter dated April 25, 2022. A timeline of the report is as follows:

- Investigation Report, submitted December 12, 2021
- *Disapproval*, received April 25, 2022

The response to comments is provided in Attachment A. This submittal includes two hard copies of the report and a CD with an electronic copy of the redlined report and the revised report (Attachment B). The electronic copies will also be submitted by email to NMED.

If you have any questions or comments regarding the information contained herein, please do not hesitate to contact Mr. John Moore at (505) 879-7643.

Western Refining Southwest LLC
A subsidiary of Marathon Petroleum Corporation

Jamestown, NM 87347

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction of supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Western Refining Southwest LLC, Marathon Gallup Refinery

Ruth A Cade

RESPONSE TO COMMENTS

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 1:	**Response 1:**
In the *Executive Summary*, page 2 of 15, paragraph 4, the Permittee states, "[t]he results were compared with NMED Industrial Soil Screening Levels (SSLs) dated June 2019." Comment 4 of the NMED's March 4, 2021 *Disapproval Rail Car Loading Area Release Soil Sampling Investigation Work Plan* (Disapproval) states, "[s]ince some soil samples will be collected below one foot bgs, analytical results must also be screened by comparison to NMED Residential and Construction Worker Soil Screening Levels (SSLs)." The Permittee did not follow this direction or provide an explanation for not comparing the results to NMED's Residential (Res) and Construction Worker (CW) SSLs. For perspective, the Permittee must list residential screening levels in addition to industrial and construction worker screening levels for comparison regardless of the site cleanup objectives. According to Table 1 (Sampling Locations, Depths, and PID Readings), multiple soil samples were collected at depths below one foot below ground surface (bgs). Note the Commercial/Industrial Worker (Ind) SSLs evaluate risk for soils collected from ground surface to one foot bgs. Since Res and CW SSLs are relevant to soil samples collected within ten feet bgs, compare soil analytical results with Res and CW SSLs as well as Ind SSLs in the revised Report. Furthermore, since dilution attenuation factor (DAF) SSLs are also relevant to the vadose zone soil samples, evaluate soil analytical results with DAF SSLs in the revised Report, as appropriate, or explain why the results are not compared with DAF SSLs in the revised Report. Revise the Report accordingly.	The approved revised work plan, submitted to the New Mexico Environment Department (NMED) on April 30, 2021, did not include sample comparison to dilution attenuation factor (DAF) soil screening levels (SSLs). Therefore, the Refinery does not include sample comparison to DAF in this report. Additionally, the Refinery has known impacts to groundwater, including the presence of separate phase hydrocarbons and as associated smear zone which can act as a long term source to groundwater. The expectation for shorter longevity in the vadose zone can be attributed to several factors, including greater air saturation and less contaminant mass. Diffusive transport is faster in soils with higher air saturation (ITRC 2009), suggesting that mass removal of VOCs is faster in the vadose zone. The combination of less contaminant mass, faster transport, rates, and high degradation potential suggest that shorter longevity in the vadose zone is a reasonable assumption. Therefore, it follows that soils overlying the smear zone may not require an interim response for the purpose of protecting groundwater. The Refinery proposes to conduct a holistic migration to groundwater analysis on a site-wide basis. Tables 2 through 5 have been updated to include sample comparison to NMED Residential, Industrial, and Construction Worker SSLs. Executive Summary, page 2 of 17, paragraph 4, has been revised to state, "The results were compared with NMED Industrial Soil Screening Levels (SSLs), NMED Residential SSLs, and Construction Worker SSLs dated November 2021." Additionally, Section 3.0, page 13 of 17, paragraph 2, has been revised to state, "Tables 2 through 5 were compared to NMED Residential, Industrial, and Construction Worker SSLs. Non-detect reporting limit exceedances are noted with an asterisk (*) on Tables 2 through 5." Discussion regarding Residential and Construction Worker SSLs for VOCs, SVOCs, Metals, and General Chemistry have been added to Sections 3.1, 3.2, 3.3, and 3.4, respectively. Reference: ITRC. 2009. Evaluation Natural Source Zone Depletion at Sites with LNAPL, ITRC LNAPL Team. April.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 2:	**Response 2:**

In the *Executive Summary*, page 2 of 15, paragraph 4, the Permittee states, "[t]here were no [volatile organic compounds] VOC or metal exceedances. Toxicity Characteristic Leaching Procedure [TCLP] was deemed not necessary, based on the total metals results. It should be noted that none of the [semi-volatile organic compound] SVOC exceedances were detected results. However, several sample locations had elevated reporting limits for SVOCs and those reporting limits exceeded their respective NMED Industrial SSLs for the constituents noted below." Although SVOC and total petroleum hydrocarbons (TPH) analytes whose reporting limits exceed the respective Ind SSLs were discussed as a data gap, analytes with reporting limits that exceed the Res SSLs were not included in the discussion. According to Table 2 (Volatile Organic Compounds), the vinyl chloride and 1,2,3-trichloropropane concentrations in multiple soil samples exceeded the applicable Res SSLs of 7.42E-01 mg/kg and 5.10E-02 mg/kg, respectively. The detection limits of analytes must be lower than the applicable screening levels; otherwise, address the concentrations of all analytes where the detection limits are higher than the screening levels as data quality exceptions and include the discussion in the revised Report. These data quality exceptions must be identified in the text, tables, and figures.	Tables 2 through 5 have been revised to include an asterisk (*) for results in which the reporting limit for non-detect results exceeds NMED Residential, Industrial, and Construction Worker SSLs. Table 2 has been updated to clearly mark 1,2,3-Trichloropropane non-detect Residential SSL exceedances with an asterisk and is included in the discussion in the Report. However, the Refinery respectfully disagrees that there are Residential SSL exceedances for vinyl chloride. NMED noted that the Residential SSL for vinyl chloride is 7.42E-01 (i.e., 0.742) milligrams per kilogram (mg/kg). The highest analytical result for vinyl chloride was non-detect with a reporting limit of 0.41 mg/kg, collected at RCR-SB-6 (3 ft bgs) (Table 2). As 0.41 mg/kg is less than 0.742 mg/kg, there are no exceedances for vinyl chloride.
	
	Executive Summary, page 2 of 17, paragraph 4, has been revised to state, "Detected NMED Residential SSLs exceedances were identified for the following analytes:
	• SVOCs by Selected Ion Monitoring (SIM)
	  ○ Benzo(a)pyrene
	  ○ Dibenzo(a,h)anthracene
	  ○ Naphthalene
	The Refinery is an industrial site; therefore, NMED Residential SSLs exceedances will not be used in determining remediation efforts. It should be noted that none of the VOC, SVOC, or metals exceedances were detected results. However, several sample locations had elevated reporting limits and those reporting limits exceeded their respective NMED Industrial, Residential, and/or Construction Worker SSLs for the constituents noted below:
	• VOCs:
	  ○ 1,2-Dibromo-3-chloropropane
	  ○ 1,2,3-Trichloropropane
	• SVOCs:
	  ○ Bis(2-chloroethyl)ether
	  ○ 2-Chlorophenol
	  ○ 3,3'-Dicholorobenzidine
	  ○ 2,4-Dichlorophenol

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
	○ 2,4-Dinitrophenol ○ 2,4-Dinitrotoluene ○ 2,6-Dinitrotoluene ○ Hexachlorobenzene ○ Hexachlorobutadiene ○ Hexachlorocyclopentadiene ○ Hexachloroethane ○ Nitrobenzene ○ N-Nitrosodimethylamine ○ Pentachlorophenol ○ 1,2,4-Trichlorobenzene ○ 2,4,6-Trichlorophenol ○ Bis(2-ethylhexyl)phthalate • Metals: ○ Arsenic • General chemistry analytes: ○ TPH-DRO ○ TPH-GRO ○ TPH-ORO"

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 3:	**Response 3:**
In the *Executive Summary*, page 3 of 15, paragraph 2, the Permittee states, "[t]he excavation can be reliably guided by visual and olfactory observations and PID field screenings. Excavation depth will be determined by using a PID during the excavation. Excavation will continue vertically until the PID readings are below 100 parts per million or until refusal, whichever occurs first. Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected." The laboratory analytical results obtained from confirmation sampling must ultimately be used to guide the extent of the excavation. Furthermore, the discussion regarding the excavation plan and procedure is premature based on the results of this investigation because the Report indicates that the vertical and lateral extents of contamination in the vicinity of the Rail Car Loading area were not delineated (See Comment 10). Remove the discussion regarding the excavation plan and procedure from this section of the revised Report or revise the statement so that excavation activities will be deferred until the Permittee determines the full extent of contamination at the site.	The Refinery respectfully disagrees that delineation has not been met and believes that the data of this report have near full lateral and horizontal delineation of contamination as a result of the railcar release. As stated in the report, laboratory analytical results obtained from confirmation samples will ultimately guide the extent of excavation. Executive Summary, page 4 of 17, paragraph 1, has been revised to state, "Based on the analytical data and field observations collected to date, the impacted area will be excavated to the extent existing infrastructure allows. PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils have been removed. Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected. The sample results will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data."
Comment 4:	**Response 4:**
In Section 2.1 (Summary of Field Sampling Activities), page 9 of 15, paragraph 5, the Permittee states, "[t]he samples were placed in laboratory provided sample containers, labeled, and placed in a cooler, iced, and delivered to Hall Environmental Laboratories for analysis for TPH-DRO by Method 8015M/D, TPH-GRO by Method 8015D, VOCs by Methods 8260B and 1311, SVOCs by Methods 8270 and 8270SIM, total metals by Method 6020, and mercury by Method 7471." Section 1.3 (Sampling Activities Per the Approved Work Plan), page 8 of 15, bullet 1 states that the soil samples were also analyzed for TPH oil range organics (ORO) by Method 8015. Table 5 (General Chemistry) includes the results of TPH-ORO analysis. Revised the statement to include TPH-ORO analysis in the appropriate section(s) of the revised Report.	Section 2.1 (Summary of Field Sampling Activities), now page 10 of 17, paragraph 5, has been revised to state, "[t]he samples were placed in laboratory provided sample containers, labeled, and placed in a cooler, iced, and delivered to Hall Environmental Laboratories for analysis for TPH-DRO by Method 8015M/D, TPH-GRO by Method 8015D, TPH-ORO by Method 8015, VOCs by Methods 8260B and 1311, SVOCs by Methods 8270 and 8270SIM, total metals by Method 6020, and mercury by Method 7471."

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 5:	**Response 5:**
In Section 2.3 (Deviations from Approved Plan), page 10 of 15, white bullet 2, the Permittee states, "[t]he Refinery will install this soil boring and collect samples in accordance with the approved Work Plan during the next drilling event, if feasible. An addendum to this Report, summarizing field observations and analytical results of this soil boring, will be provided to NMED 90 days after receipt of analytical data." NMED recommends that the soil boring be installed before or after monsoon season when heavy rain events are expected to occur due to the potential issue associated with stormwater runoff in the area. Provide an anticipated installation date for the soil boring the revised Report and notify NMED prior to beginning installation activities.	Section 2.3 (Deviations from Approved Plan), now page 11 of 17, white bullet 2, has been revised to state, "[t]he Refinery plans to install this soil boring and collect samples in accordance with the approved Work Plan during second quarter 2023, pending NMED approval of this Report. An addendum to this Report, summarizing field observations and analytical results of this soil boring, will be provided to NMED 90 days after the receipt of analytical data." Additionally, the Refinery will notify NMED via email prior to installation of this boring.
Comment 6:	**Response 6:**
In Section 3.1 (VOCs), page 2 of 15, paragraph 3, the Permittee states, "[n]o Industrial SSL exceedances were identified for VOCs." Include a discussion of the comparison with Res and CW SSLs in the revised Report. In addition, according to Table 2, the vinyl chloride and 1,2,3-trichloropropane concentrations in multiple soil samples exceed the applicable Res SSLs. The detection limits of analytes must be lower than the applicable screening levels; otherwise, address the concentrations of all analytes where the detection limits are higher as data quality exceptions and include the discussion in the revised Report (see Comment 2). These data quality exceptions must be identified in the text, tables, and figures.	Section 3.1, now page 13 of 17, has been revised to state: "The sample results of VOCs compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Table 2. No Industrial SSL or Construction Worker SSL exceedances were identified for VOCs. Residential SSL exceedances were identified for two VOCs, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL. It should be noted that the Refinery is an industrial site; therefore NMED Residential SSL exceedances will not be used to determine remediation efforts. The two VOCs with Residential SSL exceedances are: • 1,2-Dibromo-3-chloropropane • 1,2,3- Trichloropropane" Table 2 has been updated to mark 1,2-Dibromo-3-chloropropane and 1,2,3-Trichloropropane non-detect Residential SSL exceedances with an asterisk. However, the Refinery respectfully disagrees that there are Residential SSL exceedances for vinyl chloride. NMED noted in Comment 2 that the Residential SSL for vinyl chloride is 7.42E-01 (i.e., 0.742) mg/kg. The highest analytical result for vinyl chloride was non-detect with a reporting limit of 0.41 mg/kg, collected at RCR-SB-6 (3 ft bgs) (Table 2). As 0.41 mg/kg is less than 0.742 mg/kg, there are no exceedances for vinyl chloride.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 7:	**Response 7:**
Although Section 3.2 (SVOCs), page 12 of 15 provides a discussion regarding ten SVOC constituents with reporting limits that exceed their respective In SSL. Section 3.2 does not provide a discussion about whether there were SVOC analytes with detected concentrations that exceed Ind, Res, and/or CW SSLs. Provide the discussion in the revised Report.	Section 3.2 (SVOCs), page 13 of 17, has been revised to include "The sample results of SVOCs compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Tables 3A and 3B. Reporting limits exceedances of Residential, Industrial, and/or Construction Worker SSLs were identified for 20 SVOCs, but most exceedances are for non-detect results. The 17 non-detect SVOCs are: • Bis(2-chloroethyl)ether • 2-Chlorophenol • 3,3'-Dichlorobenzidine • 2,4-Dichlorophenol • 2,4-Dinitrophenol • 2,4-Dinitrotoluene • 2,6-Dinitrotoluene • Hexachlorobenzene • Hexachlorobutadiene • Hexachlorocyclopentadiene • Hexachloroethane • Nitrobenzene • N-Nitrosodimethylamine • Pentachlorophenol • 1,2,4-Trichlorobenzene • 1,4,6-Trichlorophenol • Bis(2-ethylhexyl)phthalate The Residential SSL reporting limit exceedances for the 3 SVOCs by Selected Ion Monitoring analysis are: • Benzo(a)pyrene • Dibenzo(a,h)anthracene • Naphthalene It should be noted that several of the samples where reporting limits exceeded NMED Residential, Industrial, or Construction Worker SSLs required dilution for analysis due to elevated target and/or non-target analytes, as indicated by the TPH-DRO, TPH-GRO, and/or TPH-ORO results. "

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 8:	**Response 8:**
In Section 3.3 (Metals), page 13 of 15, paragraph 1, the Permittee states, "[t]he sample results of metals compared to their respective NMED Residential and Industrial SSLs are provided in Table 4. No Industrial SSL exceedances were identified for metals. Because no exceedances were identified for metals, TCLP analysis was deemed not necessary and was therefore not conducted." It is not clear why the Permittee did not include TCLP analysis when soil concentrations did not exceed Ind SSLs; however, since TCLP analysis is related to hazardous waste determinations, the analysis wouldn't apply until waste characterization is necessary. Provide an additional explanation in the revised Report. In addition, all soil sample results must be compared with the respective Ind, Res, and CW SSLs. Revise the Report accordingly.	Section 3.3 (Metals), page 14 of 17, has been revised to state "The sample results of metals compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Table 4. No Industrial or Construction Worker SSL exceedances were identified for metals. Residential SSL exceedances were identified for total arsenic, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL. The analysis performed on the samples collected for this investigation was total constituent analysis, not TCLP. TCLP analysis is typically performed for characterization of waste prior to disposal for purposes of hazardous waste characterization. Total constituent analysis is sometimes performed in lieu of the TCLP analysis, by multiplying the TCLP standards by 20 to compare to the results of the total constituent analysis. The TCLP standards multiplied by 20 have been added to Table 4, for comparison to the analytical results. There were no analytes with concentrations (detected or non-detected) that exceeded the TCLP standards multiplied by 20. As such, TCLP analysis was deemed not necessary, in accordance with the approved Work Plan. However, the final characterization of the material can be determined during waste profiling."

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 9:	**Response 9:**
In Section 3.6 (Correlation of Analytical Results with PID Field Screening), page 13 of 15, paragraph 5, the Permittee states, "[r]esults indicate a potential positive correlation between elevated PID readings (i.e., greater than or equal to 100 parts per million[ppm]) and Industrial SSL exceedances identified for TPH-DRO, TPH-GRO, and TPH-ORO. There is also potential positive correlation between the PID readings, analytical results, and soil characteristics observed in the field. Therefore, PID readings will be collected during excavation to confirm that hydrocarbon-impacted soil has been excavated from the rail car loading area, along with visual indicators and laboratory confirmation sampling." Although elevated PID readings correlate with TPH concentration based on the data provided in Tables 1 and 5 (General Chemistry), PID readings alone are not a useful indicator of DRO or ORO concentrations and must not be solely used to determine the extent of the excavation. The laboratory analytical results obtained from confirmation sampling must be used to guide the extent of excavation. If Res SSLs cannot be met during confirmation sampling, Ind and/or CW SSLs may be used to guide removal; however, the Permittee will be required to implement institutional controls, if residential risk levels are not achieved.	Section 3.6, now page 15 of 17, paragraph 5, has been revised to state, "[t]herefore, PID readings and laboratory confirmation samples will be collected during excavation to confirm that hydrocarbon-impacted soil has been excavated from the rail car loading area, along with visual indicators." Additionally, Section 4.0, now page 16 of 17, paragraph 2, has been revised to state, "[t]he sample results will be compared to Residential, Industrial, and Construction Worker SSLs. The comparison will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data."
Comment 10:	**Response 10:**
In Section 3.7 (Analytical Results Summary), page 13 of 15, paragraph 6, and Section 4.0 (Conclusions), page 14 of 15, paragraph 3, the Permittee states, "[t]he data presented in Section 3.0 will be used to determine proposed excavation extents [and f]ollowing NMED's review of these results and approval of this report, the Refinery plans to proceed with excavation. The general excavation extent is shown on Figure 4." Address the following issues associated with the proposed extent of excavation in the first and second areas, as defined by Section 2.2 (Field Observation), page 10 of 15: a. According to Table 5, the TPH-DRO concentrations in the soil samples collected from boring RCR-SB-4 at the ground surface and a depth of 2 feet bgs are recorded as 4,000 and 3,300 mg/kg, respectively, exceeding the Ind/CW SSL of 3,000 mg/kg and Res SSL of 1,000 mg/kg. Since soil borings west of RCR-SB-4 were not advanced to delineate the lateral extent of the TPH-DRO	a. The western boundary of the excavation can be initially guided by visual and olfactory impacts and PID readings. Laboratory wall confirmation samples at the boundary of the excavation will ultimately guide the extent of the excavation. Figure 4 has been expanded to include the entirety of RCR-SB-4. b. The Refinery agrees that the analytical result for TPH-DRO at RCR-SB-5 at a depth of 5 ft bgs (1,200 mg/kg) exceeds the Residential SSL (1,000 mg/kg). However, this analytical result does not exceed the Construction Worker or Industrial SSLs of 3,000 mg/kg. The Refinery is an industrial site. As such, remediation should be based on Industrial and Construction Worker SSL exceedances. Therefore, the Refinery respectfully disagrees that delineation was not met. No changes to the Report were made based on Comment 10(b) and

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
contamination beyond the first area, it is not possible to determine the extent of the western boundary of the excavation. Therefore, the lateral extent of TPH-DRO contamination in the first area has not been defined. b. According to Table 5, the TPH-DRO concentrations in the soil sample collected from boring RCR-SB-5 at a depth of 5 feet bgs is recorded as 1,200 J mg/kg, exceeding Res SSL of 1,000 mg/kg. Since soil borings north of RCR-SB-5 were not advanced to delineate the lateral extent of the TPH-DRO contamination in the first area, it is not possible to determine the extent of the northern boundary of the excavation. Therefore, the lateral extent of TPH-DRO contamination in the first area has not been defined. c. According to Table 5, the TPH-DRO concentrations in the soil samples collected from boring RCR-SB-6 at depths of 2.5 and 3 feet bgs are recorded as 11,000 and 16,000 mg/kg, exceeding Ind/CW SSL of 3,000 mg/kg and Res SSL of 1,000 mg/kg. The rail tracks are located adjacent to boring RCR-SB-6; therefore, soil borings east of RCR-SB-6 could not be advanced. As a result, the lateral and vertical extents of TPH-DRO contamination in the vicinity of RCR-SB-6 could not be delineated. It is possible that the lateral extent of the TPH-DRO contamination in the vicinity of RCR-SB-6 may potentially extend east toward the second area across the rail tracks based on the sampling results presented in Figure 3. State whether the rail tracks are currently operational or if there are plans to become operational in the revised Report. It is important to determine the eastward extent of the area east near RCR-SB-6. Propose to investigate the extent of potential contamination along the rail tracks in a separate investigation work plan, as appropriate, or propose to defer the investigation along the rail tracks until they are no longer in use. d. According to Table 5, the TPH-DRO concentrations in the soil samples collected from boring RCR-SB-1 at depths of 2.5 and 8 feet bgs are recorded as 3,300 and 1,200 mg/kg, respectively, exceeding Ind/CW SSL of 3,000 mg/kg and Res SSL of 1,000 mg/kg. Since boring RCR-SB-1 was terminated at 8 feet bgs, the vertical extent of	drafting a second phase investigation work plan is not applicable to Comment 10(b). c. The Refinery is indefinitely idled. The rail tracks are not currently operational but may return to operational status in the future. The Refinery plans to submit an investigation work plan for Area of Concern 17 – Railroad Loading/Unloading Facility in early 2023, which will include borings on the east side of the tracks, across from RCR-SB-6. Section 4.0, page 16 of 17, first paragraph has been revised to add, "Additionally, the Refinery will submit an investigation work plan to NMED in early 2023 that proposes an investigation into Area of Concern 17 – Railroad Loading/Unloading Facility." d. The concluding sentence in NMED Comment 10(d) is not clear, as it is not a complete sentence. The TPH-DRO analytical result at RCR-SB-1 at 2.5 ft bgs was 3,300 mg/kg, which exceeds the Construction Worker SSL (3,000 mg/kg). The TPH-DRO analytical result at RCR-SB-1 at 8 ft bgs was 1,200 mg/kg, which exceeds the Residential SSL. The samples collected between 2.5 ft bgs and 8 ft bgs are lower than the Residential SSL, ranging from 470 mg/kg to 770 mg/kg. This indicates there is a separation between the impact at 2.5 ft bgs and impact at 8 ft bgs. Regardless, the Refinery is an industrial site, and as such, remediation should be based on Industrial SSL and Construction Worker SSL exceedances. Therefore, the Refinery respectfully disagrees that TPH-DRO at RCR-SB-1 was not vertically delineated, as there are no Construction Worker SSL exceedances deeper than 2.5 ft bgs. As for Laser-Induced Fluorescence (LIF) boring EB-LIF-13, the presence of diesel-like separate phase hydrocarbon (SPH) at 30 ft bgs to 35 ft bgs is more indicative of SPH near and or at the water table. Although soil samples were not collected, the LIF borehole data did not indicate that fluorescing materials (i.e., SPH) were present at shallower depths. The available data indicate a surface source for RCR-SB-1 and a deeper source for EB-LIF-13.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
TPH-DRO contamination was not delineated at boring RCR-SB-1. The Laser-Induced Fluorescence (LIF) log for boring EB-LIF-13 installed approximately 20 feet south of RCR-SB-1 indicates the presence of diesel contamination between 30 and 35 feet bgs; however, it does not indicate the presence of contamination above 25 feet bgs. Soil samples were not collected from boring EB-LIF-13; therefore, it is unknown whether the TPH-DRO contamination in the vicinity of RCR-SB-1 extends deeper than 8 feet bgs toward EB-LIF-13. In addition, the TPH-DRO concentrations in the soil samples collected from boring RCR-SB-2 at a depth of 2 feet bgs are recorded as 24,000 J and 46,000 J mg/kg. Boring RCR-SB-2 is located approximately 60 feet north of boring RCR-SB-1 and the TPH-DRO contamination identified at the depth interval of 2 to 2.5 ft bgs may be contiguous between borings RCR-SB-1 and RCR-SB-2. The LIF log for boring EB-LIF-14 advanced approximately 180 feet north of RCR-SB-2 indicates the presence of diesel contamination between the ground surface and 6 feet bgs. It is possible that the shallow soil contamination may also be contiguous between borings RCR-SB-2 and EB-LIF-14. Since soil borings north of RCR-SB-2, south of RCR-SB-1, and east and west of RCR-SB-1 and RCR-SB-2 were not advanced to delineate the extent of TPH-DRO contamination. Based on Comments 10a, 10b, and 10d, proposing an excavation with the current investigation results may not address the extent of contamination. The Permittee must propose a second phase investigation work plan to delineate the extent of contamination in the second area if the full extent of contamination is not addressed. If there are unresolved issues related to the extent of contamination, the second phase investigation work plan must be submitted to NMED no later than April 28, 2023.	In review of the data between RCR-SB-1 and RCR-SB-2, including RCR-SS-7, RCR-SS-8, and RCR-SS-9, there is a possibility that DRO contamination may be contiguous. There is a magnitude decrease between the RCR-SB-2 (2 ft bgs) and RCR-SB-1 (2.5 ft bgs) and another one- to two-magnitude decrease in DRO concentrations from RCR-SB-1 to RCR-SS-7, RCR-SS-8, and RCR-SS-9. In review of LIF boring EB-LIF-14, the results were noted as "residual/no response" because the maximum response intensity recorded as 28.7 % Reference Emitter (%RE) at 0.88 ft bgs. The LIF response intensity (i.e., % RE) is influenced by the concentration, composition, and state (e.g., weathered, degraded) of SPH present in the site soil in refence to the calibration fuel blend used as a reference (*Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report*, Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery, revised May 25, 2022). Based on the low %RE measured at EB-LIF-14 and the distance between it and RCR-SB-2, it is unlikely that the SPH impacts at the two surficial areas are connected. Because visual and olfactory observations, PID readings and confirmation sampling will be conducted as part of the excavation process, Western believes the impact extent of the railcar release area has been adequately delineated to move forward with excavation in second quarter of 2023. Western is proposing to submit a work plan to investigate AOC 17 (Railroad Loading/Unloading Facility) outside of the railcar release area in first quarter of 2023. Any additional concerns from NMED can be addressed in the work plan.

New Mexico Environment Department (NMED) to Western Refining Southwest LLC (Western) Comment Letter "Disapproval, Rail Car Loading Area Release Soil Sampling Investigation Report" (April 25, 2022)

NMED Comment	Western Response
Comment 11:	**Response 11:**
In Section 4.0 (Conclusions), page 14 of 15, paragraph 1, the Permittee states, "[o]ne soil boring will be installed at a later date, and applicable information will be submitted to NMED as an addendum to this report 90 days after the receipt of analytical data." If appropriate, the results of this investigation must be incorporated in the second phase investigation work plan, required by Comments 10a, 10b, and 10d. The Permittee may be required to remove contaminated soils contingent on the results of the investigation; however, the possibility is not discussed in the Report. Include a discussion in the revised Report.	Comment acknowledged. Section 4.0, now page 16 of 17, has been revised to add, "Additionally, the Refinery will submit an investigation work plan to NMED in early 2023 that proposes an investigation into Area of Concern 17 – Railroad Loading/Unloading Facility."

WESTERN REFINING SOUTHWEST LLC

D/B/A MARATHON GALLUP REFINERY

RAIL CAR LOADING AREA RELEASE SOIL SAMPLING INVESTIGATION REPORT

DECEMBER 12, 2021

REVISED NOVEMBER 30, 2022

Executive Summary

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery), is submitting this investigation report for sampling of soils at the rail car loading area to evaluate if hydrocarbon impacts exist in the area. The sampling was conducted to determine if additional investigation or soil excavation would be necessary following historical releases. The sampling took place during the weeks of August 9, 2021 and August 16, 2021. Sampling was conducted in accordance with an approved revised work plan submitted to the New Mexico Environment Department (NMED) on April 30, 2021 (MPC 2021) and approved by NMED on June 15, 2021 (NMED 2021).

On May 7, 2017, a hydrocarbon spill was discovered pooling underneath the pipe rack located along the west side of the rail car loading area (see Section 1.1, Figure 2). An estimated 8,900 gallons of recovered gasoline were placed in a slop tank. At that time, no soil confirmation samples were collected. The on-site laboratory analyzed one release sample, which verified that the released product was gasoline. In an effort to remove impacts, approximately 153 tons of impacted soils were excavated from beneath the pipe rack in November 2018 (MPC 2020).

On March 13, 2019, diesel was discovered leaking in the rail car loading area due to a connection failure on the diesel filter pot. Diesel leaked across the railroad tracks into a culvert carrying product into the stormwater ditch (see Section 2.1, Figure 2). An estimated 42 barrels was released; 40 barrels were recovered via vacuum truck and 2 barrels were not recovered.

The August 2021 investigation field work consisted of:

- Collection of surface soil samples within the gasoline release and diesel release areas
- Installation of soil borings to observe visual impacts, collection of photoionization detector (PID) readings, and collection of soil samples from the borings.
- Collection of equipment blanks and blind duplicates at a rate of 10 percent.

The soil surface samples were collected using a hand auger and hand trowels, and soil borings were completed with a Geoprobe direct push rig. All samples were analyzed for total petroleum hydrocarbons (TPH)– diesel range organics (DRO), TPH – gasoline range organics (GRO), TPH – oil range organics (ORO), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total metals, and mercury. The results were compared with NMED Industrial, Construction Worker, and Residential Soil Screening Levels (SSLs), dated November 2021 ~~dated June 2019~~. ~~There were no VOC or metal exceedances.~~ Toxicity Characteristic Leaching Procedure was deemed not necessary, based on the total metals results. Detected NMED Residential SSLs exceedances were identified for the following analytes:

- SVOCs by Selected Ion Monitoring (SIM)
  - Benzo(a)pyrene
  - Dibenzo(a,h)anthracene

- Naphthalene

The Refinery is an industrial site; therefore, NMED Residential SSLs exceedances will not be used in determining remediation efforts. It should be noted that none of the VOC, SVOC, or metals exceedances were detected results. However, several sample locations had elevated reporting limits ~~for SVOCs~~ and those reporting limits exceeded their respective NMED Industrial, Construction Worker, and/or Residential SSLs for the constituents noted below:

- VOCs
  - 1,2-Dibromo-3-chloropropane
  - 1,2,3-Trichloropropane
- SVOCs:
  - Bis(2-chloroethyl)ether
  - Bis (2-ethylhexyl)phthalate
  - 2-Chlorophenol
  - 3,3'-Dicholorobenzidine
  - 2,4-Dichlorophenol
  - 2,4-Dinitrophenol
  - 2,4-Dinitrotoluene
  - 2,6-Dinitrotoluene
  - 1,2,4-Trichlorobenzene
  - Hexachlorobenzene
  - Hexachlorobutadiene
  - Hexachlorocyclopentadiene
  - Hexachloroethane
  - Nitrobenzene
  - N-Nitrosodimethylamine
  - 2,4,6-Trichlorophenol
  - Pentachlorophenol
- Metals:
  - Arsenic
- General chemistry analytes:
  - TPH-DRO
  - TPH-GRO
  - TPH-ORO

Based on the analytical data and field observations collected to date, the impacted area will be excavated to the extent that existing infrastructure allows. PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils associated with the railcar release have been removed. ~~The excavation can be reliably guided by visual and olfactory observations and PID field screenings. Excavation depth will be determined by using a PID during the excavation. Excavation will continue vertically until the PID readings are below 100 parts per million or until refusal, whichever occurs first.~~ Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected. The sample results will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data.

1.0 Introduction

Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) is submitting this investigation report for the sampling of soils at the rail car loading area for hydrocarbon impacts due to historical releases. The sampling was conducted to determine if additional investigation or soil excavation is necessary. The sampling took place during the weeks of August 9, 2021 and August 16, 2021. Sampling was conducted in accordance with the approved revised work plan submitted to the New Mexico Environment Department (NMED) on April 30, 2021 (MPC 2021) and approved by NMED on June 15, 2021 (NMED 2021).

1.1 Background

The Refinery is located approximately 17 miles east of Gallup, McKinley County, New Mexico along the north side of Interstate Highway I-40 (Figure 1). The physical address is I-40, Exit #39 Jamestown, New Mexico 87347. The Refinery property covers approximately 810 acres and is currently indefinitely idled.

As detailed in "Response Action Report, DGS 105 Additive Tank – Rail Car Loading Area – Gasoline Release" (MPC 2020), approximately 8,900 gallons of gasoline were released under the rail car loading rack on May 7, 2017. In November 2018, approximately 153 tons of petroleum-impacted soils beneath the pipe rack were excavated to a depth of 18 inches below ground surface (bgs) (MPC 2020). Based on the analytical data from the excavation, the release was not anticipated to extend further into the subsurface. However, soil confirmation samples were not collected, and this assumption was not confirmed. On March 13, 2019, an estimated 1,765 gallons of diesel were released in the same area. Of the 42 barrels (1,765 gallons) released, approximately 40 barrels (1,680 gallons) were recovered via vacuum truck.

1.2 Historic Sampling and Results

Prior sampling around the Rail Car Loading area was conducted during the 2019 Laser-induced Fluorescence (LIF)/Hydraulic Profiling (HP) Investigation. LIF borings EB-LIF-12, EB-LIF-13, EB-LIF-14 are located near the Rail Car Loading area. Boring EB-LIF-12 showed a response indicative of gasoline, EB-LIF-13 showed a response indicative of diesel, and EB-LIF-14 did not have a response indicative of a specific hydrocarbon product. More information on the LIF/HP Investigation can be found in the "Tank 570 and Additional Areas Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report," submitted to NMED on October 28, 2021.

1.3 Sampling Activities Per the Approved Work Plan

A revised Work Plan (MPC 2021) was submitted and approved by the NMED in June 2021 (NMED 2021), and consisted of the following major elements:

- Collect soil samples within the gasoline release excavation area
- Install soil borings to observe impacts, collect photoionization detector (PID) readings for evidence of impacts, and collect soil samples from the borings at the surface and then at 2.5-foot (ft) intervals until 8 ft bgs.

- Analysis of samples using field screening with a PID, and submission of laboratory samples for analysis of total petroleum hydrocarbons (TPH) – diesel range organics (DRO) by Method 8015M/D, TPH - gasoline range organics (GRO) by Method 8015D, TPH – oil range organics (ORO) by Method 8015, volatile organic compounds (VOCs) by Method 8260B/1311, semivolatile organic compounds (SVOCs) by Method 8270/8270SIM, total metals by Method 6020, and mercury by Method 7471.
- Analysis of Toxicity Characteristic Leaching Procedure (TCLP) metals by Method 6010B, if deemed necessary based on total metals results.
- Duplicate samples and equipment blanks for the purpose of quality assurance.
- Analytical results comparison against NMED Residential and Industrial Soil Screening Levels (SSLs) (NMED 2019).

2.0 Field Investigation Results

Trihydro Corporation (Trihydro) conducted field activities and sampling during the weeks of August 9, and August 16, 2021. The samples were collected from 17 locations, including 6 soil borings and 11 surface soil sample locations. Boring sample depths ranged from surface to 8 ft bgs. The samples were generally collected in the locations presented in the Work Plan (MPC 2021) but deviated slightly based on the conditions observed in the rail car loading area during the sampling, as discussed in Section 2.3.

2.1 Summary of Field Sampling Activities

A total of 54 samples plus 7 duplicate samples, 7 equipment blanks, and 3 trip blanks were collected from the release area in August 2021. Both surface soil samples and soil samples from borings were collected. Additionally, PID readings were collected in the field from all soil borings. Sample locations are shown on Figure 2.

Surface soil samples were collected using a hand trowel or hand auger. Surface samples were taken at 11 different locations within the known diesel and gasoline release area. At each location, a sample was collected at 6 inches bgs and 1 ft bgs.

Soil borings were installed at six different locations surrounding the known diesel and gasoline release areas. A Geoprobe was used to complete the borings. Field samples were collected at 1 ft intervals starting at the surface through to the total boring depth. These samples were placed in a Ziploc® bag and allowed to warm to 70 degrees Fahrenheit. The headspace was measured for petroleum hydrocarbons with a PID and recorded on the boring logs. All PID readings collected are shown on Table 1. Similarly, analytical samples from the borings were collected first at the surface, and then at 2.5-ft intervals to the total boring depth of 8 ft bgs. An additional sample was collected if signs of contamination (i.e., the highest PID reading) was recorded outside the proposed sampling interval of every 2.5 ft. Total depth was achieved at five of the soil borings; one boring was completed at 3 ft bgs due to encountering a concrete pad.

All soils obtained for analysis were also visually inspected and classified in the field, in general accordance with American Society for Testing and Materials D2487 (Unified Soil Classification System) and D2488 (Description and Identification of Soils) by a field geologist. All observations were recorded in boring logs (Attachment A). The samples were placed in laboratory provided sample containers, labeled, and placed in a cooler, iced, and delivered to Hall Environmental Laboratories for analysis for TPH-DRO by Method 8015M/D, TPH-GRO by Method 8015D, TPH-ORO by Method 8015, VOCs by Methods 8260B and 1311, SVOCs by Methods 8270 and 8270SIM, total metals by Method 6020, and mercury by Method 7471.

2.2 Field Observations

This investigation focused on three impacted areas, shown in red and green on Figure 2. The first area is west of the rail car loading area. Impacts from gasoline and diesel releases were presumed to be present in this area. The second area is east of the rail car loading area. Diesel release impacts were presumed to be present in this area, as the diesel spill that occurred in the first area was able to travel east via a stormwater culvert. The third

area is north of the second area, as a stormwater conveyance ditch allowed diesel from the same spill to travel into this third area.

Four soil borings (RCR-SB-3, RCR-SB-4, RCR-SB-5, and RCR-SB-6) were installed around the first area. Soils in these borings were visually impacted from hydrocarbons, as a smear zone was present, and accompanied by a hydrocarbon smell. Six surface soil sample locations (RCR-SS1 through RCR-SS6) were also collected from around or within this first area. A hydrocarbon odor was noted from the soil samples.

Two soil borings (RCR-SB-1 and RCR-SB-2) and three surface soil sample locations (RCR-SS7, RCR-SS8, and RCR-SS9) were installed in the second area. A hydrocarbon smell was noted throughout RCR-SB-1, with hydrocarbon staining towards the bottom of the boring. Pockets of tar were observed in soil boring RCR-SB-2.

Two surface soil samples (RCR-SS10 and RCR-SS11) were collected from the third area. No soil borings were installed in this area, as summarized in Section 2.3. Both surface soil samples were noted to be all reddish-brown clay with no hydrocarbon odor and no hydrocarbon staining.

Completed soil boring logs can be referenced in Attachment A.

2.3 Deviations from Approved Plan

Deviations from the sampling plan approved by NMED (NMED 2021) included the following:

- Completion of RCR-SB-6:
  - Per the approved Work Plan, soil borings were to be completed to a depth of 8 ft bgs. RCR-SB-6 was only completed to a depth of 3 ft bgs, due to a concrete pad encountered at 3 ft bgs. Samples from RCR-SB-6 were collected in accordance with the Work Plan.
- Completion of a soil boring in the third area:
  - Per the approved Work Plan, a soil boring was to be completed to a depth of 8 ft bgs in the northern stormwater culvert. However, field work was conducted during a period of heavy rains, and stormwater runoff from the eastern side of the Refinery collected in this stormwater culvert. As such, the approved proposed soil boring location was under approximately 3 to 4 ft of water. Several attempts were made to drain this stormwater culvert, but afternoon rains refilled the culvert. Additionally, the mud in this area made it impossible to position the drill rig safely. Due to these circumstances, this soil boring was not collected. The Refinery plans to~~will~~ install this soil boring and collect samples in accordance with the approved Work Plan during second quarter 2023, pending NMED approval of this Report ~~the next drilling event, if feasible~~. An addendum to this Report summarizing field observations and analytical results of this soil boring, will be provided to NMED 90 days after receipt of analytical data.

- Analysis of mercury by Method 7470:
    - Per the approved Work Plan, samples were to be analyzed for mercury by Method 7470. However, Method 7470 is the method for groundwater analysis. Method 7471 is the method for soil analysis. Because all samples collected during this investigation were soil samples, the samples were analyzed for mercury by Method 7471.

3.0 Laboratory Analytical Results

Results of the various parameters with applicable standards are presented in the following tables:

- Table 2 – VOCs
- Table 3A – SVOCs
- Table 3B – SVOCs by Selected Ion Monitoring analysis
- Table 4 – Metals
- Table 5 – General Chemistry

Tables 2 through 5 were compared to NMED Residential, Industrial, and Construction Worker SSLs. Non-detect reporting limit exceedances are noted with an asterisk (*) on Tables 2 through 5. Analytical laboratory reports are included in Attachment B. Results for TPH-DRO and TPH-GRO are shown on Figure 3.

3.1 VOCs

The sample results of VOCs compared to their respective NMED Residential, ~~and~~ Industrial, and Construction Worker SSLs are provided in Table 2. No Industrial or Construction Worker SSL exceedances were identified for VOCs. Residential SSL exceedances were identified for two VOCs, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL. The two VOCs with Residential SSL exceedances are:

- 1,2-Dibromo-3-chloropropane
- 1,2,3-Trichloropropane

3.2 SVOCs

The sample results of SVOCs compared to their respective NMED Residential, ~~and~~ Industrial, and Construction Worker SSLs are provided in Tables 3A and 3B. Reporting limits exceedances of Residential, ~~i~~Industrial, and/or Construction Worker SSLs were identified for ~~1~~20 SVOCs, but ~~all~~most exceedances are for non-detect results. The 1~~7~~0 non-detect SVOCs are:

- Bis(2-chloroethyl)ether
- 2-Chlorophenol
- 3,3'-Dichlorobenzidine
- 2,4-Dichlorophenol
- 2,4-Dinitrophenol
- 2,4-Dinitrotoluene
- 2,6-Dinitrotoluene
- Hexachlorobenzene
- Hexachlorobutadiene
- Hexachlorocyclopentadiene
- Hexachloroethane
- Nitrobenzene

- N-Nitrosodimethylamine
- Pentachlorophenol
- 1,2,4-Trichlorobenzene
- 1,4,6-Trichlorophenol
- Bis(2-ethylhexyl)phthalate

The Residential SSL reporting limit exceedances for the 3 SVOCs by SIM analysis are:

- Benzo(a)pyrene
- Dibenzo(a,h)anthracene
- Naphthalene

It should be noted that several of the samples where reporting limits exceeded NMED Residential, ~~i~~Industrial, or Construction Worker SSLs required dilution for analysis due to elevated target and/or non-target analytes, as indicated by TPH-DRO, TPH-GRO, and/or TPH-ORO results. For example, RCR-SB-6 (3 ft) has a dilution factor of 50 and RCR-SB-2 (2ft) has a dilution factor of 100 for SVOC analysis. This dilution caused the SVOC reporting limits on some samples to be elevated. Therefore, this dilution may be a contributing factor in the number of non-detect, reporting limit exceedances identified for SVOCs.

3.3 Metals

The sample results of metals compared to their respective NMED Residential, ~~and~~ Industrial, and Construction Worker SSLs are provided in Table 4. No Industrial or Construction Worker SSL exceedances were identified for metals. Residential SSL exceedances were identified for total arsenic, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL. ~~Because no exceedances were identified for metals, TCLP analysis was deemed not necessary and was therefore not conducted.~~

The analysis performed on the samples collected for this investigation was total constituent analysis, not TCLP. TCLP analysis is typically performed for characterization of waste prior to disposal for purposes of hazardous waste characterization. Total constituent analysis is sometimes performed in lieu of the TCLP analysis, by multiplying the TCLP standard by 20 to compare to the results of the total constituent analysis. The TCLP standards multiplied by 20 are presented in Table 4, for comparison to the analytical results. There were no analytes with concentrations (detected or non-detected) that exceeded the TCLP standards multiplied by 20. As such, TCLP analysis was deemed not necessary, in accordance with the approved Work Plan. The final characterization of the material can be determined during waste profiling.

3.4 General Chemistry

The sample results for general chemistry analytes compared to their respective NMED Residential, ~~and~~ Industrial, and Construction Worker SSLs are provided in Table 5. Industrial SSL exceedances were identified for TPH-DRO, TPH-GRO, and TPH-ORO.

3.5 QA/QC Samples

Three methanol blank samples were provided by the laboratory as trip blanks. These samples were sent in the coolers by the laboratory and were not altered between sampling and analysis. There were no analytes detected in the trip blank samples.

Tier II data validation was performed on the data package provided by the laboratory. The Tier II data validation included a review of the completeness of the data packages, chain of custody forms, sample condition receipts, sample preservations, holding times, the case narrative, and the quality control summary. Several data points were assigned data qualifiers during Tier II data validation indicating one or more results are an estimated concentration ("J"), an estimated concentration but may be biased low ("J-"), an estimated concentration but may be biased high ("J+"), an estimated reporting limit ("UJ"), or evaluated to be undetected at the reporting limit ("U"). No data points were rejected and the data completeness for this data set is 100 percent acceptable. A Tier II data validation report is presented in Attachment C.

3.6 Correlation of Analytical Results with PID Field Screening

PID results were compared to the TPH results collected from the same sample. PID results are included in Table 1 and TPH results are included in Table 5. Results indicate a potential positive correlation between elevated PID readings (i.e., greater than or equal to 100 parts per million[ppm]) and Industrial SSL exceedances identified for TPH-DRO, TPH-GRO, and TPH-ORO. There is also potential positive correlation between the PID readings, analytical results, and soil characteristics observed in the field. Therefore, PID readings and laboratory confirmation samples will be collected during excavation to confirm that hydrocarbon-impacted soil has been excavated from the rail car loading area, along with visual indicators ~~and laboratory confirmation sampling~~.

3.7 Analytical Results Summary

Of the 54 samples, 46 samples had non-detect SVOC results that exceeded their respective Industrial or Construction Worker SSLs, and 11~~9~~ samples had TPH results that exceeded their respective Industrial or Construction Worker SSLs. Results also indicate a positive correlation between elevated PID readings and TPH exceedances. The data presented in Section 3.0 will be used to determine proposed excavation extents. Additionally, PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils have been removed.

4.0 Conclusions

This investigation was conducted to characterize soils in the rail car loading area for future excavation. Much of the vertical and horizontal delineation of contamination was achieved. One soil boring will be installed at a later date, and applicable information will be submitted to NMED as an addendum to this report 90 days after the receipt of analytical data. Additionally, the Refinery will submit an investigation work plan to NMED in early 2023 that proposes an investigation into Area of Concern 17 – Railroad Loading/Unloading Facility.

Significant findings of this investigation include:

- No VOC or SVOC SIM Industrial or Construction Worker SSL exceedances
- 46 samples with 1 or more SVOC reporting limit Industrial or Construction Worker SSL exceedance
- No metals Industrial or Construction Worker SSL exceedances
- ~~9~~11 samples with 1 or more TPH Industrial or Construction Worker SSL exceedance

The results provide a firm basis for proceeding with excavation. Following NMED's review of these results and approval of this report, the Refinery plans to proceed with excavation. The general excavation area is shown on Figure 4. Based on the analytical data and field observations, the excavation of the impacted areas can be reliably guided by visual and olfactory observation and PID field screenings. PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils from the railcar release have been removed. ~~Excavation depth will be determined by using PID during the excavation. Excavation will continue vertically until the PID readings are below 100 ppm or until refusal, whichever occurs first.~~ Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected. The sample results will be compared to Residential, Industrial, and Construction Worker SSLs. The comparison will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data.

The Refinery will engage an excavation contractor upon receipt of NMED approval of this report. Following excavation, soils will be sampled and managed appropriately.

CONSTITUENT TABLE EXPLANATION

RCR-SS-7	8/2021 (SAMPLE DATE)
FT BGS (SAMPLE LOCATION / FEET BELOW GROUND SURFACE)	1
TPH-GRO	500/100
TPH-DRO	3,000/1,000 (NMED INDUSTRIAL/CONSTRUCTION WORKER SSL (mg/kg) / NMED RESIDENTAIL SSL (mg/kg))

NOTES:

1. BOLD TEXT INDICATES RESULTS THAT EXCEEDED THE NMED INDUSTRIAL SSL (0-1 FT BGS)
2. ITALICIZED TEXT INDICATES RESULTS THAT EXCWEED THE NMED RESIDENTIAL SLL (ALL DEPTHS)
3. UNDERLINED TEXT INDICATES RESULTS THAT EXCEED THE NMED CONSTRUCTION WORKER SLL (DEEPER THAN 1 FT BGS)
4. TPH-DRO = TOTAL PETROLEUM HYDROCARBON - DIESEL RANGE ORGANICS
5. TPH-GRO = TOTAL PETROLEUM HYDROCARBON - GASOLINE RANGE ORGANICS
6. J = ESTIMATED CONCENTRATION
7. J+ = ESTIMATED CONCENTRATION, POSSIBLY BIASED HIGH
8. ND = NOT DETECTED (REPORTING LIMIT IN PARENTHESES)
9. NMED = NEW MEXICO ENVIRONMENT DEPARTMENT
10. MG/KG = MILLIGRAMS PER KILOGRAM
11. SSL = SOIL SCREENING LEVEL

ELECTRONIC REVISED REPORT

WESTERN REFINING SOUTHWEST LLC

D/B/A MARATHON GALLUP REFINERY

RAIL CAR LOADING AREA RELEASE SOIL SAMPLING INVESTIGATION REPORT

DECEMBER 12, 2021

REVISED DECEMBER 31, 2022

Executive Summary

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery), is submitting this investigation report for sampling of soils at the rail car loading area to evaluate if hydrocarbon impacts exist in the area. The sampling was conducted to determine if additional investigation or soil excavation would be necessary following historical releases. The sampling took place during the weeks of August 9, 2021 and August 16, 2021. Sampling was conducted in accordance with an approved revised work plan submitted to the New Mexico Environment Department (NMED) on April 30, 2021 (MPC 2021) and approved by NMED on June 15, 2021 (NMED 2021).

On May 7, 2017, a hydrocarbon spill was discovered pooling underneath the pipe rack located along the west side of the rail car loading area (see Section 1.1, Figure 2). An estimated 8,900 gallons of recovered gasoline were placed in a slop tank. At that time, no soil confirmation samples were collected. The on-site laboratory analyzed one release sample, which verified that the released product was gasoline. In an effort to remove impacts, approximately 153 tons of impacted soils were excavated from beneath the pipe rack in November 2018 (MPC 2020).

On March 13, 2019, diesel was discovered leaking in the rail car loading area due to a connection failure on the diesel filter pot. Diesel leaked across the railroad tracks into a culvert carrying product into the stormwater ditch (see Section 2.1, Figure 2). An estimated 42 barrels was released; 40 barrels were recovered via vacuum truck and 2 barrels were not recovered.

The August 2021 investigation field work consisted of:

- Collection of surface soil samples within the gasoline release and diesel release areas
- Installation of soil borings to observe visual impacts, collection of photoionization detector (PID) readings, and collection of soil samples from the borings.
- Collection of equipment blanks and blind duplicates at a rate of 10 percent.

The soil surface samples were collected using a hand auger and hand trowels, and soil borings were completed with a Geoprobe direct push rig. All samples were analyzed for total petroleum hydrocarbons (TPH)– diesel range organics (DRO), TPH – gasoline range organics (GRO), TPH – oil range organics (ORO), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total metals, and mercury. The results were compared with NMED Industrial, Construction Worker, and Residential Soil Screening Levels (SSLs), dated November 2021. Toxicity Characteristic Leaching Procedure was deemed not necessary, based on the total metals results. Detected NMED Residential SSLs exceedances were identified for the following analytes:

- SVOCs by Selected Ion Monitoring (SIM)
    - Benzo(a)pyrene
    - Dibenzo(a,h)anthracene
    - Naphthalene

The Refinery is an industrial site; therefore, NMED Residential SSLs exceedances will not be used in determining remediation efforts. It should be noted that none of the VOC, SVOC, or metals exceedances were detected results. However, several sample locations had elevated reporting limits and those reporting limits exceeded their respective NMED Industrial, Construction Worker, and/or Residential SSLs for the constituents noted below:

- VOCs
    - 1,2-Dibromo-3-chloropropane
    - 1,2,3-Trichloropropane
- SVOCs:
    - Bis(2-chloroethyl)ether
    - Bis (2-ethylhexyl)phthalate
    - 2-Chlorophenol
    - 3,3'-Dicholorobenzidine
    - 2,4-Dichlorophenol
    - 2,4-Dinitrophenol
    - 2,4-Dinitrotoluene
    - 2,6-Dinitrotoluene
    - 1,2,4-Trichlorobenzene
    - Hexachlorobenzene
    - Hexachlorobutadiene
    - Hexachlorocyclopentadiene
    - Hexachloroethane
    - Nitrobenzene
    - N-Nitrosodimethylamine
    - 2,4,6-Trichlorophenol
    - Pentachlorophenol
- Metals:
    - Arsenic
- General chemistry analytes:
    - TPH-DRO
    - TPH-GRO
    - TPH-ORO

Based on the analytical data and field observations collected to date, the impacted area will be excavated to the extent that existing infrastructure allows. PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils associated with the railcar release have been removed. Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected. The sample results will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data.

1.0 Introduction

Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery [Refinery]) is submitting this investigation report for the sampling of soils at the rail car loading area for hydrocarbon impacts due to historical releases. The sampling was conducted to determine if additional investigation or soil excavation is necessary. The sampling took place during the weeks of August 9, 2021 and August 16, 2021. Sampling was conducted in accordance with the approved revised work plan submitted to the New Mexico Environment Department (NMED) on April 30, 2021 (MPC 2021) and approved by NMED on June 15, 2021 (NMED 2021).

1.1 Background

The Refinery is located approximately 17 miles east of Gallup, McKinley County, New Mexico along the north side of Interstate Highway I-40 (Figure 1). The physical address is I-40, Exit #39 Jamestown, New Mexico 87347. The Refinery property covers approximately 810 acres and is currently indefinitely idled.

As detailed in "Response Action Report, DGS 105 Additive Tank – Rail Car Loading Area – Gasoline Release" (MPC 2020), approximately 8,900 gallons of gasoline were released under the rail car loading rack on May 7, 2017. In November 2018, approximately 153 tons of petroleum-impacted soils beneath the pipe rack were excavated to a depth of 18 inches below ground surface (bgs) (MPC 2020). Based on the analytical data from the excavation, the release was not anticipated to extend further into the subsurface. However, soil confirmation samples were not collected, and this assumption was not confirmed. On March 13, 2019, an estimated 1,765 gallons of diesel were released in the same area. Of the 42 barrels (1,765 gallons) released, approximately 40 barrels (1,680 gallons) were recovered via vacuum truck.

1.2 Historic Sampling and Results

Prior sampling around the Rail Car Loading area was conducted during the 2019 Laser-induced Fluorescence (LIF)/Hydraulic Profiling (HP) Investigation. LIF borings EB-LIF-12, EB-LIF-13, EB-LIF-14 are located near the Rail Car Loading area. Boring EB-LIF-12 showed a response indicative of gasoline, EB-LIF-13 showed a response indicative of diesel, and EB-LIF-14 did not have a response indicative of a specific hydrocarbon product. More information on the LIF/HP Investigation can be found in the "Tank 570 and Additional Areas Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report," submitted to NMED on October 28, 2021.

1.3 Sampling Activities Per the Approved Work Plan

A revised Work Plan (MPC 2021) was submitted and approved by the NMED in June 2021 (NMED 2021), and consisted of the following major elements:

- Collect soil samples within the gasoline release excavation area
- Install soil borings to observe impacts, collect photoionization detector (PID) readings for evidence of impacts, and collect soil samples from the borings at the surface and then at 2.5-foot (ft) intervals until 8 ft bgs.

- Analysis of samples using field screening with a PID, and submission of laboratory samples for analysis of total petroleum hydrocarbons (TPH) – diesel range organics (DRO) by Method 8015M/D, TPH - gasoline range organics (GRO) by Method 8015D, TPH – oil range organics (ORO) by Method 8015, volatile organic compounds (VOCs) by Method 8260B/1311, semivolatile organic compounds (SVOCs) by Method 8270/8270SIM, total metals by Method 6020, and mercury by Method 7471.
- Analysis of Toxicity Characteristic Leaching Procedure (TCLP) metals by Method 6010B, if deemed necessary based on total metals results.
- Duplicate samples and equipment blanks for the purpose of quality assurance.
- Analytical results comparison against NMED Residential and Industrial Soil Screening Levels (SSLs) (NMED 2019).

2.0 Field Investigation Results

Trihydro Corporation (Trihydro) conducted field activities and sampling during the weeks of August 9, and August 16, 2021. The samples were collected from 17 locations, including 6 soil borings and 11 surface soil sample locations. Boring sample depths ranged from surface to 8 ft bgs. The samples were generally collected in the locations presented in the Work Plan (MPC 2021) but deviated slightly based on the conditions observed in the rail car loading area during the sampling, as discussed in Section 2.3.

2.1 Summary of Field Sampling Activities

A total of 54 samples plus 7 duplicate samples, 7 equipment blanks, and 3 trip blanks were collected from the release area in August 2021. Both surface soil samples and soil samples from borings were collected. Additionally, PID readings were collected in the field from all soil borings. Sample locations are shown on Figure 2.

Surface soil samples were collected using a hand trowel or hand auger. Surface samples were taken at 11 different locations within the known diesel and gasoline release area. At each location, a sample was collected at 6 inches bgs and 1 ft bgs.

Soil borings were installed at six different locations surrounding the known diesel and gasoline release areas. A Geoprobe was used to complete the borings. Field samples were collected at 1 ft intervals starting at the surface through to the total boring depth. These samples were placed in a Ziploc® bag and allowed to warm to 70 degrees Fahrenheit. The headspace was measured for petroleum hydrocarbons with a PID and recorded on the boring logs. All PID readings collected are shown on Table 1. Similarly, analytical samples from the borings were collected first at the surface, and then at 2.5-ft intervals to the total boring depth of 8 ft bgs. An additional sample was collected if signs of contamination (i.e., the highest PID reading) was recorded outside the proposed sampling interval of every 2.5 ft. Total depth was achieved at five of the soil borings; one boring was completed at 3 ft bgs due to encountering a concrete pad.

All soils obtained for analysis were also visually inspected and classified in the field, in general accordance with American Society for Testing and Materials D2487 (Unified Soil Classification System) and D2488 (Description and Identification of Soils) by a field geologist. All observations were recorded in boring logs (Attachment A). The samples were placed in laboratory provided sample containers, labeled, and placed in a cooler, iced, and delivered to Hall Environmental Laboratories for analysis for TPH-DRO by Method 8015M/D, TPH-GRO by Method 8015D, TPH-ORO by Method 8015, VOCs by Methods 8260B and 1311, SVOCs by Methods 8270 and 8270SIM, total metals by Method 6020, and mercury by Method 7471.

2.2 Field Observations

This investigation focused on three impacted areas, shown in red and green on Figure 2. The first area is west of the rail car loading area. Impacts from gasoline and diesel releases were presumed to be present in this area. The second area is east of the rail car loading area. Diesel release impacts were presumed to be present in this area, as the diesel spill that occurred in the first area was able to travel east via a stormwater culvert. The third

area is north of the second area, as a stormwater conveyance ditch allowed diesel from the same spill to travel into this third area.

Four soil borings (RCR-SB-3, RCR-SB-4, RCR-SB-5, and RCR-SB-6) were installed around the first area. Soils in these borings were visually impacted from hydrocarbons, as a smear zone was present, and accompanied by a hydrocarbon smell. Six surface soil sample locations (RCR-SS1 through RCR-SS6) were also collected from around or within this first area. A hydrocarbon odor was noted from the soil samples.

Two soil borings (RCR-SB-1 and RCR-SB-2) and three surface soil sample locations (RCR-SS7, RCR-SS8, and RCR-SS9) were installed in the second area. A hydrocarbon smell was noted throughout RCR-SB-1, with hydrocarbon staining towards the bottom of the boring. Pockets of tar were observed in soil boring RCR-SB-2.

Two surface soil samples (RCR-SS10 and RCR-SS11) were collected from the third area. No soil borings were installed in this area, as summarized in Section 2.3. Both surface soil samples were noted to be all reddish-brown clay with no hydrocarbon odor and no hydrocarbon staining.

Completed soil boring logs can be referenced in Attachment A.

2.3 Deviations from Approved Plan

Deviations from the sampling plan approved by NMED (NMED 2021) included the following:

- Completion of RCR-SB-6:
    - Per the approved Work Plan, soil borings were to be completed to a depth of 8 ft bgs. RCR-SB-6 was only completed to a depth of 3 ft bgs, due to a concrete pad encountered at 3 ft bgs. Samples from RCR-SB-6 were collected in accordance with the Work Plan.
- Completion of a soil boring in the third area:
    - Per the approved Work Plan, a soil boring was to be completed to a depth of 8 ft bgs in the northern stormwater culvert. However, field work was conducted during a period of heavy rains, and stormwater runoff from the eastern side of the Refinery collected in this stormwater culvert. As such, the approved proposed soil boring location was under approximately 3 to 4 ft of water. Several attempts were made to drain this stormwater culvert, but afternoon rains refilled the culvert. Additionally, the mud in this area made it impossible to position the drill rig safely. Due to these circumstances, this soil boring was not collected. The Refinery plans to install this soil boring and collect samples in accordance with the approved Work Plan during second quarter 2023, pending NMED approval of this Report. An addendum to this Report summarizing field observations and analytical results of this soil boring, will be provided to NMED 90 days after receipt of analytical data.

- Analysis of mercury by Method 7470:
    - Per the approved Work Plan, samples were to be analyzed for mercury by Method 7470. However, Method 7470 is the method for groundwater analysis. Method 7471 is the method for soil analysis. Because all samples collected during this investigation were soil samples, the samples were analyzed for mercury by Method 7471.

3.0 Laboratory Analytical Results

Results of the various parameters with applicable standards are presented in the following tables:

- Table 2 – VOCs
- Table 3A – SVOCs
- Table 3B – SVOCs by Selected Ion Monitoring analysis
- Table 4 – Metals
- Table 5 – General Chemistry

Tables 2 through 5 were compared to NMED Residential, Industrial, and Construction Worker SSLs. Non-detect reporting limit exceedances are noted with an asterisk (*) on Tables 2 through 5. Analytical laboratory reports are included in Attachment B. Results for TPH-DRO and TPH-GRO are shown on Figure 3.

3.1 VOCs

The sample results of VOCs compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Table 2. No Industrial or Construction Worker SSL exceedances were identified for VOCs. Residential SSL exceedances were identified for two VOCs, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL. The two VOCs with Residential SSL exceedances are:

- 1,2-Dibromo-3-chloropropane
- 1,2,3-Trichloropropane

3.2 SVOCs

The sample results of SVOCs compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Tables 3A and 3B. Reporting limits exceedances of Residential, Industrial, and/or Construction Worker SSLs were identified for 20 SVOCs, but most exceedances are for non-detect results. The 17 non-detect SVOCs are:

- Bis(2-chloroethyl)ether
- 2-Chlorophenol
- 3,3'-Dichlorobenzidine
- 2,4-Dichlorophenol
- 2,4-Dinitrophenol
- 2,4-Dinitrotoluene
- 2,6-Dinitrotoluene
- Hexachlorobenzene
- Hexachlorobutadiene
- Hexachlorocyclopentadiene
- Hexachloroethane
- Nitrobenzene

- N-Nitrosodimethylamine
- Pentachlorophenol
- 1,2,4-Trichlorobenzene
- 1,4,6-Trichlorophenol
- Bis(2-ethylhexyl)phthalate

The Residential SSL reporting limit exceedances for the 3 SVOCs by SIM analysis are:

- Benzo(a)pyrene
- Dibenzo(a,h)anthracene
- Naphthalene

It should be noted that several of the samples where reporting limits exceeded NMED Residential, Industrial, or Construction Worker SSLs required dilution for analysis due to elevated target and/or non-target analytes, as indicated by TPH-DRO, TPH-GRO, and/or TPH-ORO results. For example, RCR-SB-6 (3 ft) has a dilution factor of 50 and RCR-SB-2 (2ft) has a dilution factor of 100 for SVOC analysis. This dilution caused the SVOC reporting limits on some samples to be elevated. Therefore, this dilution may be a contributing factor in the number of non-detect, reporting limit exceedances identified for SVOCs.

3.3 Metals

The sample results of metals compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Table 4. No Industrial or Construction Worker SSL exceedances were identified for metals. Residential SSL exceedances were identified for total arsenic, but these exceedances are data quality exceptions in which the reporting limit of a non-detect result is greater than the applicable SSL.

The analysis performed on the samples collected for this investigation was total constituent analysis, not TCLP. TCLP analysis is typically performed for characterization of waste prior to disposal for purposes of hazardous waste characterization. Total constituent analysis is sometimes performed in lieu of the TCLP analysis, by multiplying the TCLP standard by 20 to compare to the results of the total constituent analysis. The TCLP standards multiplied by 20 are presented in Table 4, for comparison to the analytical results. There were no analytes with concentrations (detected or non-detected) that exceeded the TCLP standards multiplied by 20. As such, TCLP analysis was deemed not necessary, in accordance with the approved Work Plan. The final characterization of the material can be determined during waste profiling.

3.4 General Chemistry

The sample results for general chemistry analytes compared to their respective NMED Residential, Industrial, and Construction Worker SSLs are provided in Table 5. Industrial SSL exceedances were identified for TPH-DRO, TPH-GRO, and TPH-ORO.

3.5 QA/QC Samples

Three methanol blank samples were provided by the laboratory as trip blanks. These samples were sent in the coolers by the laboratory and were not altered between sampling and analysis. There were no analytes detected in the trip blank samples.

Tier II data validation was performed on the data package provided by the laboratory. The Tier II data validation included a review of the completeness of the data packages, chain of custody forms, sample condition receipts, sample preservations, holding times, the case narrative, and the quality control summary. Several data points were assigned data qualifiers during Tier II data validation indicating one or more results are an estimated concentration ("J"), an estimated concentration but may be biased low ("J-"), an estimated concentration but may be biased high ("J+"), an estimated reporting limit ("UJ"), or evaluated to be undetected at the reporting limit ("U"). No data points were rejected and the data completeness for this data set is 100 percent acceptable. A Tier II data validation report is presented in Attachment C.

3.6 Correlation of Analytical Results with PID Field Screening

PID results were compared to the TPH results collected from the same sample. PID results are included in Table 1 and TPH results are included in Table 5. Results indicate a potential positive correlation between elevated PID readings (i.e., greater than or equal to 100 parts per million[ppm]) and Industrial SSL exceedances identified for TPH-DRO, TPH-GRO, and TPH-ORO. There is also potential positive correlation between the PID readings, analytical results, and soil characteristics observed in the field. Therefore, PID readings and laboratory confirmation samples will be collected during excavation to confirm that hydrocarbon-impacted soil has been excavated from the rail car loading area, along with visual indicators.

3.7 Analytical Results Summary

Of the 54 samples, 46 samples had non-detect SVOC results that exceeded their respective Industrial or Construction Worker SSLs, and 11 samples had TPH results that exceeded their respective Industrial or Construction Worker SSLs. Results also indicate a positive correlation between elevated PID readings and TPH exceedances. The data presented in Section 3.0 will be used to determine proposed excavation extents. Additionally, PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils have been removed.

4.0 Conclusions

This investigation was conducted to characterize soils in the rail car loading area for future excavation. Much of the vertical and horizontal delineation of contamination was achieved. One soil boring will be installed at a later date, and applicable information will be submitted to NMED as an addendum to this report 90 days after the receipt of analytical data. Additionally, the Refinery will submit an investigation work plan to NMED in early 2023 that proposes an investigation into Area of Concern 17 – Railroad Loading/Unloading Facility.

Significant findings of this investigation include:

- No VOC or SVOC SIM Industrial or Construction Worker SSL exceedances
- 46 samples with 1 or more SVOC reporting limit Industrial or Construction Worker SSL exceedance
- No metals Industrial or Construction Worker SSL exceedances
- 11 samples with 1 or more TPH Industrial or Construction Worker SSL exceedance

The results provide a firm basis for proceeding with excavation. Following NMED's review of these results and approval of this report, the Refinery plans to proceed with excavation. The general excavation area is shown on Figure 4. Based on the analytical data and field observations, the excavation of the impacted areas can be reliably guided by visual and olfactory observation and PID field screenings. PID field screening and laboratory confirmation sampling will be used during excavation to confirm that all impacted soils from the railcar release have been removed. Floor and wall confirmation samples will be collected and analyzed for TPH-DRO and TPH-GRO. Wall confirmation samples will be collected every 250 feet along the excavation perimeter and six floor samples will be collected. The sample results will be compared to Residential, Industrial, and Construction Worker SSLs. The comparison will be submitted to NMED in a subsequent report 120 days after the receipt of analytical data.

The Refinery will engage an excavation contractor upon receipt of NMED approval of this report. Following excavation, soils will be sampled and managed appropriately.

bgs- Below ground surface
Dup - Field duplicate
ft - Foot or feet
J - Estimated concentration
J+ - Estimated concentration, possibly biased high
mg/kg - Milligrams per kilogram
NA - Not available
ND - Not detected at the reporting limit
NMED - New Mexico Environment Department
SSL - Soil Screening Level
U - Evaluated to be undetected at the reported concentration

Notes:
1. Bold text indicates results that exceed the NMED Industrial SSL (0 - 1 ft bgs).
2. Italicized text indicates results that exceed the NMED Residential SSL (all depths).
3. Underlined text indicates results that exceed the NMED Construction Worker SSL (deeper than 1 ft bgs)
4. * indicates a non-detected result in which the reporting limit exceeds the NMED Industrial, Residential, and/or Construction Worker SSL.

Released to Imaging: 11/23/2022 2:25:36 PM

bgs - Below ground surface
Dup - Field duplicate
ft - Foot or feet
J - Estimated concentration
mg/kg - Milligrams per kilogram
NA - Not available
ND - Not detected at the reporting limit
NMED - New Mexico Environment Department
SSL - Soil Screening Level
UJ - Estimated reporting limit

Notes:
1. Bold text indicates results that exceed the NMED Industrial SSL (0 - 1 ft bgs).
2. Italicized text indicates results that exceed the NMED Residential SSL (all depths).
3. Underlined text indicates results that exceed the NMED Construction Worker SSL (deeper than 1 ft bgs)
4. * indicates a non-detected result in which the reporting limit exceeds the NMED Industrial, Residential, and/or Construction Worker SSL.

NMED Residential SSL		1,000	100	1,000
NMED Construction Worker SSL		3,000	500	3,800

bgs - Below ground surface
Dup - Field duplicate
ft - Foot or feet
J - Estimated concentration
J+ - Estimated concentration, possibly biased high
mg/kg - Milligrams per kilogram
ND - Not detected at the reporting limit
NMED - New Mexico Environment Department
SSL - Soil Screening Level

Notes:
1. Bold text indicates results that exceed the NMED Industrial SSL (0 - 1 ft bgs).
2. Italicized text indicates results that exceed the NMED Residential SSL (all depths).
3. Underlined text indicates results that exceed the NMED Construction Worker SSL (deeper than 1 ft bgs)
4. * indicates a non-detected result in which the reporting limit exceeds the NMED Industrial, Residential, and/or Construction Worker SSL.

RE: Railcar Release Investigation OrderNo.: 2108A86

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 6 sample(s) on 8/19/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Temp of samples _____ C Attempt to Cool ? _____

Comments: _____

Received by OCD: 11/15/2022 12:27:55 PM

Released to Imaging: 11/23/2022 2:25:36 PM

Anatek Labs, Inc.

Sample Receipt and Preservation Form

MBH1038

Due: 09/13/21

Client Name: HALL Project:

TAT: (Normal) RUSH: _____ days

Samples Received From: (FedEx) UPS USPS Client Courier Other: _____

Custody Seal on Cooler/Box: (Yes) No Custody Seals Intact: (Yes) No N/A

Number of Coolers/Boxes: 1 Type of Ice: (Ice/Ice Packs) Blue Ice Dry Ice None

Packing Material: (Bubble Wrap) Bags Foam/Peanuts None Other: _____

Cooler Temp As Read (°C): 4.7 Cooler Temp Corrected (°C): — Thermometer Used: IR-5

				Comments:
Samples Received Intact?	(Yes)	No	N/A	
Chain of Custody Present?	(Yes)	No	N/A	
Samples Received Within Hold Time?	(Yes)	No	N/A	
Samples Properly Preserved?	Yes	No	(N/A)	
VOC Vials Free of Headspace (<6mm)?	Yes	No	(N/A)	
VOC Trip Blanks Present?	Yes	No	(N/A)	
Labels and Chains Agree?	(Yes)	No	N/A	
Total Number of Sample Bottles Received: 5				

Chain of Custody Fully Completed?	(Yes)	No	N/A	
Correct Containers Received?	(Yes)	No	N/A	
Anatek Bottles Used?	Yes	(No)	Unknown	

Record preservatives (and lot numbers, if known) for containers below:

none

Notes, comments, etc. (also use this space if contacting the client - record names and date/time)

8270 PAH - 5402 x5

Received/Inspected By: CA Date/Time: 08/27/21 1222

Form F19.00 - Eff 8 Feb 2019

RE: Railcar Release Investigation OrderNo.: 2108721

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 65 sample(s) on 8/13/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	
8. Was preservative added to bottles?	Yes ☐	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☑	No ☐	NA ☐
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	

# of preserved bottles checked for pH: (<2 or >12 unless noted)

Adjusted?

Checked by: JR/KPG/TMC 8/13/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

Attachment C – Data Validation Report

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental
Project Name: Railcar Release Investigation	Sample Matrix: Soil
Project Number: 697-089-001 Task: 0002	Sample Start Date: 08/11/2021
Date Validated: 10/06/2021	Sample End Date: 08/19/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C ▪ Polynuclear Aromatic Hydrocarbons (PAH) by SW-846 Method 8270D with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D MOD ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015M/D ▪ Total Metals by SW-846 Method 6020 ▪ Total Mercury by SW-846 Method 7471 ▪ Percent Solids by Standard Methods for the Examination of Water and Wastewater (SM) Method 2540G	
Laboratory Project ID: 2108721 and 2108A86	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Anatek Labs, Inc. of Moscow, Idaho evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Equipment blanks

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
Data Set 2108721	
RCR-SB1 (0')	2108721-001a

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Equipment and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete combined data package consisted of 10,065 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. D – Sample diluted due to matrix. J – Analyte detected below quantitation limits. R – %RPD outside laboratory limits S – % Recovery outside of range due to dilution or matrix.	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by a laboratory courier, and custody was maintained at all times.	

VALIDATION CRITERIA CHECKLIST

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The reporting limits for the data set were reviewed and appeared to be acceptable. The following dilutions were applied to the project samples.

Method	Sample(s)	Analyte(s)	Dilution Factor
6020	RCR-SB4 (2.5')	Multiple Metals	2
8015	Multiple Samples	GRO	2
8015	Multiple Samples	DRO and MRO	2
8260B	Multiple Samples	VOC	2
6020	RCR-SB3 (7.5'), RCR-SB3 (8')	Chromium and Lead	4
6020	Multiple Samples	Multiple Metals	5
7471	Multiple Samples	Mercury	5
8015	Multiple Samples	GRO	5
8015	RCR-SB4 (2.5'), RCR-SB6 (0'), RCR-SS5 (1')	DRO and MRO	5
8260B	Multiple Samples	VOC	5
6020	Multiple Samples	Select Metals	10
8015	RCR-SB6 (3')	GRO	10
8015	Multiple Samples	DRO and MRO	10
8260B	RCR-SB2 (2.5'), RCR-SB6 (3'), RCR-SS4 (1')	Select VOC	10
8270C	Multiple Samples	SVOC	10
6020	Multiple Samples	Select Metals	20
8015	Multiple Samples	DRO and MRO	20
8270C	Multiple Samples	SVOC	20
6020	RCR-SB2 (0'), RCR-SS3 (0.5')	Select Metals	50
8015	RCR-SS3 (1'), RCR-BD3, RCR-BD5	GRO	50
8015	RCR-SB5 (5'), RCR-BD1, RCR-BD3	DRO and MRO	50
8260B	Multiple Samples	Select VOC	50
Method	Sample(s)	Analyte(s)	Dilution Factor
8270C	Multiple Samples	SVOC	50
6020	RCR-SS10 (1'), RCR-BD7	Barium	80
6020	Multiple Samples	Barium	100
8015	RCR-SB2 (2')	DRO and MRO	100
8260B	RCR-SB6 (3')	1-Methylnaphthalene, 2-Methylnaphthalene	100
8270C	Multiple Samples	SVOC	100
6020	Multiple Samples	Select Metals	200
6020	Multiple Samples	Barium	500

VALIDATION CRITERIA CHECKLIST

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? — No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested mercury using Method 7470; however, the laboratory report states that the laboratory used Method 7471B for the mercury analyses. In addition, the electronic data deliverables (EDD) provided by the laboratory indicate that Method 7471 was used for the mercury analyses. The substituted analytical method met similar sensitivity, accuracy, and precision goals and was, therefore, an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? — No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 1.8°C, 5.0°C, 5.2°C, and 5.7°C as noted on the *Sample Log-in Check Lists*. Samples transferred to Anatek were received in good condition with the cooler temperatures both within and outside the recommended range at 0.9°C, 3.0°C, and 4.7°C and as noted on the *Sample Receipt and Preservation Forms*. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? — Yes

Comments: The samples were digested/extracted and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. — Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per kilogram (mg/kg), which were acceptable for the sample matrix and the analyses requested. The results for the soil samples were reported on a dry weight basis for Method 8270D. The remaining results for the soil samples were reported on a wet weight basis.

9. Did the laboratory provide any specific initial and/or continuing calibration results? — No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? — N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? — No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
8270C	Di-n-butyl phthalate	61996	0.31 mg/kg
8015D	GRO	62159	1.5 mg/kg

Non-detections of the identified analytes in the associated samples did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
6020	Metals	62061	Not Prepared
6020	Metals	62062	Not Prepared
6020	Metals	62063	Not Prepared

8015M/D	DRO	61999	RCR-SB1 (0')
8015M/D	DRO	62000	RCR-SB4 (5')
8015M/D	DRO	62016	Not Prepared
8015M/D	DRO	62104	Not Prepared
8260B	VOCs	62009	RCR-SB1 (5')
8260B	VOCs	A80534	RCR-SB1 (2.5')
8260B	VOCs	A80598	RCR-SB3 (7.5')
Method	Analytes	Batch	MS Sample Source
8260B	VOCs	A80646	RCR-SB5 (8')
8260B	VOCs	A80682	RCR-BD1
8260B	VOCs	B80573	Not Prepared
8260B	VOCs	R80598	Not Prepared
8260B	VOCs	R80607	Not Prepared
8260B	VOCs	R80646	Not Prepared
8260B	VOCs	R80682	Not Prepared
8260B	VOCs	R80737	Not Prepared
8260B	VOCs	62159	Not Prepared

VALIDATION CRITERIA CHECKLIST

8260B	VOCs	A80915	RCR-SS11 (0.5')
8260B	VOCs	R80700	Not Prepared
8270C	SVOCs	61996	Not Prepared
8270C	SVOCs	62017	RCR-SB4 (5')
8270C	SVOCs	62052	Not Prepared
8270C	SVOCs	62082	Not Prepared
8270C	SVOCs	62157	Not Prepared
8270D SIM	SVOCs	R81394	Not Prepared
8270D SIM	SVOCs	R81398	RCR-SB4 (5'), RCR-SS6 (0.5')
8270D SIM	SVOCs	R81306	RCR-SS10 (1')

Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for the MS/MSDs prepared from a project sample were within laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits	MS/MSD RPD	RPD QC Limits
8270C	**2,4-Dinitrotoluene**	**62017**	**21.7%**	**21.2%**	**36.5-81.5%**	**Acceptable**	**20%**
7471B	**Mercury**	**62142**	**194%**	**316%**	**75-125%**	**47.6%**	**20%**
7471B	**Mercury**	**62143**	**128%**	**Acceptable**	**75-125%**	**Acceptable**	**20%**
7471B	**Mercury**	**62144**	**174%**	**155%**	**75-125%**	**Acceptable**	**20%**
8015D	**GRO**	**62009**	**184%**	**169%**	**64.4-124%**	**Acceptable**	**20%**

The analyte 2,4-dinitrotoluene was not detected in the associated samples. These results were qualified as UJ due to evidence of potential low bias.

Analytes with MS and/or MSD recoveries greater than the laboratory or data validation QC limits were detected in the associated samples, and the results were qualified as J+ to indicate estimated concentrations that may be biased high.

Mercury with a MS/MSD RPD value that was above the QC limit was detected in the associated samples. These results were qualified as J to indicate estimated concentrations due to evidence of poor precision.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPD values were within laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCS/LCSD QC Limits
6020	**Barium**	**62196**	**140%**	**70-130%**
6020	**Chromium**	**62196**	**140%**	**70-130%**
6020	**Chromium**	**62061**	**221%**	**70-130%**
7471B	**Mercury**	**62297**	**61.7%**	**70-130%**

The target analytes barium and chromium were detected in the associated samples, and these results were qualified as J+ based on the evidence of potential high bias.

Mercury was detected in the associated samples, and these results were qualified as J- due to evidence of potential low bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries in the analyses of the submitted samples were within laboratory QC limits, with the following exceptions.

Method	Surrogate	Sample	Surrogate Recovery	QC Limits
8260B	**4-Bromofluorobenzene**	**RCR-SB1 (4')**	**143%**	**70-130%**
8270C	Nitrobenzene-d_5	RCR-SB2 (7.5')	24.6%	24.7-73.2%
8270C	Nitrobenzene-d_5	RCR-SB4 (5')	22.7%	24.7-73.2%
8015M/D	**DNOP**	**RCR-SS5 (1')**	**131%**	**70-130%**

DRO and ORO were detected in sample RCR-SS5 (1'). DRO and ORO in sample RCR-SS5 (1') were qualified as J+ to indicate estimated concentrations that may be biased high.

Since Method 8260B surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes when one or more surrogates was outside the acceptance range. This condition existed for the sample RCR-SB1 (4'). The target analytes in sample RCR-SB1 (4') with a surrogate recovery that was greater than the upper laboratory QC limit were qualified as J+ if detected to indicate estimated concentrations that may be biased high. Qualification was not required for the non-detected analytes in the Method 8260B analysis of sample RCR-SB1 (4').

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples RCR-SB2 (7.5') and RCR-SB4 (5'). Qualification of sample data was not required.

The SVOC results for multiple samples were not qualified based on the surrogate non-conformances in the Method 8270C analyses since the applied dilutions of 10, 20, 50, and 100 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

The DRO and MRO results for multiple samples were not qualified based on the surrogate non-conformances in the Method 8015M/D analyses since the applied dilutions of 10, 20, 50, and 100 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the total number of samples. Three trip blank samples, MeOH Blank 1, MeOH Blank 2, and MeOH Blank 3, and seven equipment blank samples, RCR-EB1, RCR-EB2, RCR-EB3, RCR-EB4, RCR-EB5, RCR-EB6, and RCR-EB7, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip blank and equipment blank samples, with the following exceptions.

Blank Sample ID	Method	Analyte	Concentration
RCR-EB1	**8260B**	**2-Butanone**	**30 µg/L**
RCR-EB2	**8260B**	**2-Butanone**	**30 µg/L**
RCR-EB3	**8260B**	**2-Butanone**	**31 µg/L**
RCR-EB4	**8260B**	**2-Butanone**	**24 µg/L**
RCR-EB5	**8260B**	**2-Butanone**	**25 µg/L**
RCR-EB6	**8260B**	**2-Butanone**	**25 µg/L**
RCR-EB1	**8260B**	**2-Hexanone**	**2.4 µg/L**
RCR-EB2	**8260B**	**2-Hexanone**	**2.6 µg/L**
RCR-EB3	**8260B**	**2-Hexanone**	**2.8 µg/L**
RCR-EB4	**8260B**	**2-Hexanone**	**2.2 µg/L**
RCR-EB5	**8260B**	**2-Hexanone**	**2.2 µg/L**
RCR-EB6	**8260B**	**2-Hexanone**	**2.3 µg/L**
RCR-EB1	**8260B**	**Acetone**	**42 µg/L**
RCR-EB2	**8260B**	**Acetone**	**47 µg/L**
RCR-EB3	**8260B**	**Acetone**	**45 µg/L**
RCR-EB4	8260B	Acetone	37 µg/L
RCR-EB5	8260B	Acetone	38 µg/L
RCR-EB6	8260B	Acetone	39 µg/L

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

VALIDATION CRITERIA CHECKLIST	
20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

- Sample RCR-BD1 was collected as a field duplicate of sample RCR-SB2 (2').
- Sample RCR-BD2 was collected as a field duplicate of sample RCR-SB5 (5').
- Sample RCR-BD3 was collected as a field duplicate of sample RCR-SB6 (3').
- Sample RCR-BD4 was collected as a field duplicate of sample RCR-SB4 (5').
- Sample RCR-BD5 was collected as a field duplicate of sample RCR-SS3 (0.5').
- Sample RCR-BD6 was collected as a field duplicate of sample RCR-SS9 (1').
- Sample RCR-BD7 was collected as a field duplicate of sample RCR-SS10 (1').

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)?	No

Comment: As indicated in the Field Duplicate Summary Tables at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

Duplicate pair RCR-SB2 (2') / RCR-BD1: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SB2 (2') and RCR-BD1.**

The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples.

An RPD value could not be calculated for benzo(a)pyrene and benzo(g,h,i)perylene for the field duplicate pair RCR-SB2 (2') and RCR-BD1 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, benzo(a)pyrene and benzo(g,h,i)perylene were qualified as J and UJ for the duplicate and parent samples, respectively.

Duplicate pair RCR-SB5 (5') / RCR-BD2: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SB5 (5') and RCR-BD2.**

The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples

An RPD value could not be calculated for total lead for the field duplicate pair RCR-SB5 (5') and RCR-BD2 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, total lead was qualified as J and UJ for the parent and duplicate samples, respectively.

An RPD value could not be calculated for multiple analytes for the field duplicate pair RCR-SB5 (5') and RCR-BD2 since these analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, these analytes were qualified as J and UJ for the duplicate and parent samples, respectively.

Duplicate pair RCR-SB6 (3') / RCR-BD3: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SB-6 (3') and RCR-BD3.**

The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples.

VALIDATION CRITERIA CHECKLIST	
An RPD value could not be calculated for benzo(g,h,i)perylene, indeno(1,2,3-cd)pyrene, benzo(k)fluoranthene, and dibenzo(a,h)anthracene for the field duplicate pair RCR-SB-6 (3') and RCR-BD3 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, benzo(g,h,i)perylene, indeno(1,2,3-cd)pyrene, benzo(k)fluoranthene, and dibenzo(a,h)anthracene were qualified as J and UJ for the duplicate and parent samples, respectively. Duplicate pair RCR-SB4 (5') / RCR-BD4: **An RPD value could not be calculated for multiple analytes for the field duplicate pair RCR-SB4 (5') and RCR-BD4 since these analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, these analytes were qualified as J and UJ for the duplicate and parent samples, respectively.** Duplicate pair RCR-SS3 (0.5') / RCR-BD5: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SS3 (0.5') and RCR-BD5.** The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples. **An RPD value could not be calculated for benzo(g,h,i)perylene for the field duplicate pair RCR-SS3 (0.5') and RCR-BD5 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, benzo(g,h,i)perylene was qualified as J and UJ for the duplicate and parent samples, respectively.** **An RPD value could not be calculated for fluorene for the field duplicate pair RCR-SS3 (0.5') and RCR-BD5 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, fluorene was qualified as J and UJ for the parent and duplicate samples, respectively.** Duplicate pair RCR-SS9 (1') / RCR-BD6: **The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SS9 (1') and RCR-BD6.** The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples. **An RPD value could not be calculated for multiple analytes for the field duplicate pair RCR-SS9 (1') and RCR-BD6 since these analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, these analytes were qualified as J and UJ for the duplicate and parent samples, respectively.** Duplicate pair RCR-SS10 (1') / RCR-BD7: **The RPD value for total mercury greatly exceeded the data validation limit of 50% at 151.1%. The total mercury results were qualified as J for the parent and duplicate samples, RCR-SS10 (1') and RCR-BD7, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%).**
22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits?	N/A
Comments: Laboratory duplicates were not prepared for the analyses in this data set.	

VALIDATION CRITERIA CHECKLIST	
23. Were the following data relationships realistic and acceptable?	
• Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement?	Yes
Comments: Analytical results for 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, and hexachlorobutadiene were reported by both Method 8260B and 8270C. The results for these analytes were reported as not detected by both methods. Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by Method 8260B, Method 8270C, and Method 8270D SIM for the submitted samples. The remaining PAHs were reported by Method 8270C and Method 8270D SIM. The results for these analytes were reported as not detected by one or more methods and/or the other results were less than five times the applicable reporting limits. Qualification of data was not required	
• Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?	N/A
Comments: Only total metals were analyzed as part of this data set.	

FIELD DUPLICATE SUMMARY

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SB2 (2') and RCR-BD1.

The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples.

An RPD value could not be calculated for benzo(a)pyrene and benzo(g,h,i)perylene for the field duplicate pair RCR-SB2 (2') and RCR-BD1 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, benzo(a)pyrene and benzo(g,h,i)perylene were qualified as J and UJ for the duplicate and parent samples, respectively.

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

An RPD value could not be calculated for multiple analytes for the field duplicate pair RCR-SB4 (5') and RCR-BD4 since these analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limit, these analytes were qualified as J and UJ for the duplicate and parent samples, respectively.

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 50%, which was evidence of poor precision. These analyte results were qualified as J for samples RCR-SS3 (0.5') and RCR-BD5.

The results for associated samples would typically be qualified based on RPD values greater than 100%, but since multiple field duplicates were collected and analyzed, determination of sample associations would be arbitrary. Therefore, the qualification of the indicated analyte results was limited to the identified samples.

An RPD value could not be calculated for benzo(g,h,i)perylene for the field duplicate pair RCR-SS3 (0.5') and RCR-BD5 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, benzo(g,h,i)perylene was qualified as J and UJ for the duplicate and parent samples, respectively.

An RPD value could not be calculated for fluorene for the field duplicate pair RCR-SS3 (0.5') and RCR-BD5 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, fluorene was qualified as J and UJ for the parent and duplicate samples, respectively.

Selenium, Total	6020	1.9 mg/kg	1.8 mg/kg	5.4%
Mercury, Total	**SW7471**	**0.011 mg/kg**	**0.079 mg/kg**	**151.1%**

Field duplicate RPD control limits are not to exceed 50% for soil as established by USEPA Region 1 - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total mercury greatly exceeded the data validation limit of 50% at 151.1%. The total mercury results were qualified as J for the parent and duplicate samples, RCR-SS10 (1') and RCR-BD7, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%).

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
ERPD-MS	The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision.
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
LR-MS	The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
